

Running Test Cases with TAPCaller

(an introduction)

General concept

Preparations

Usage with old TAP

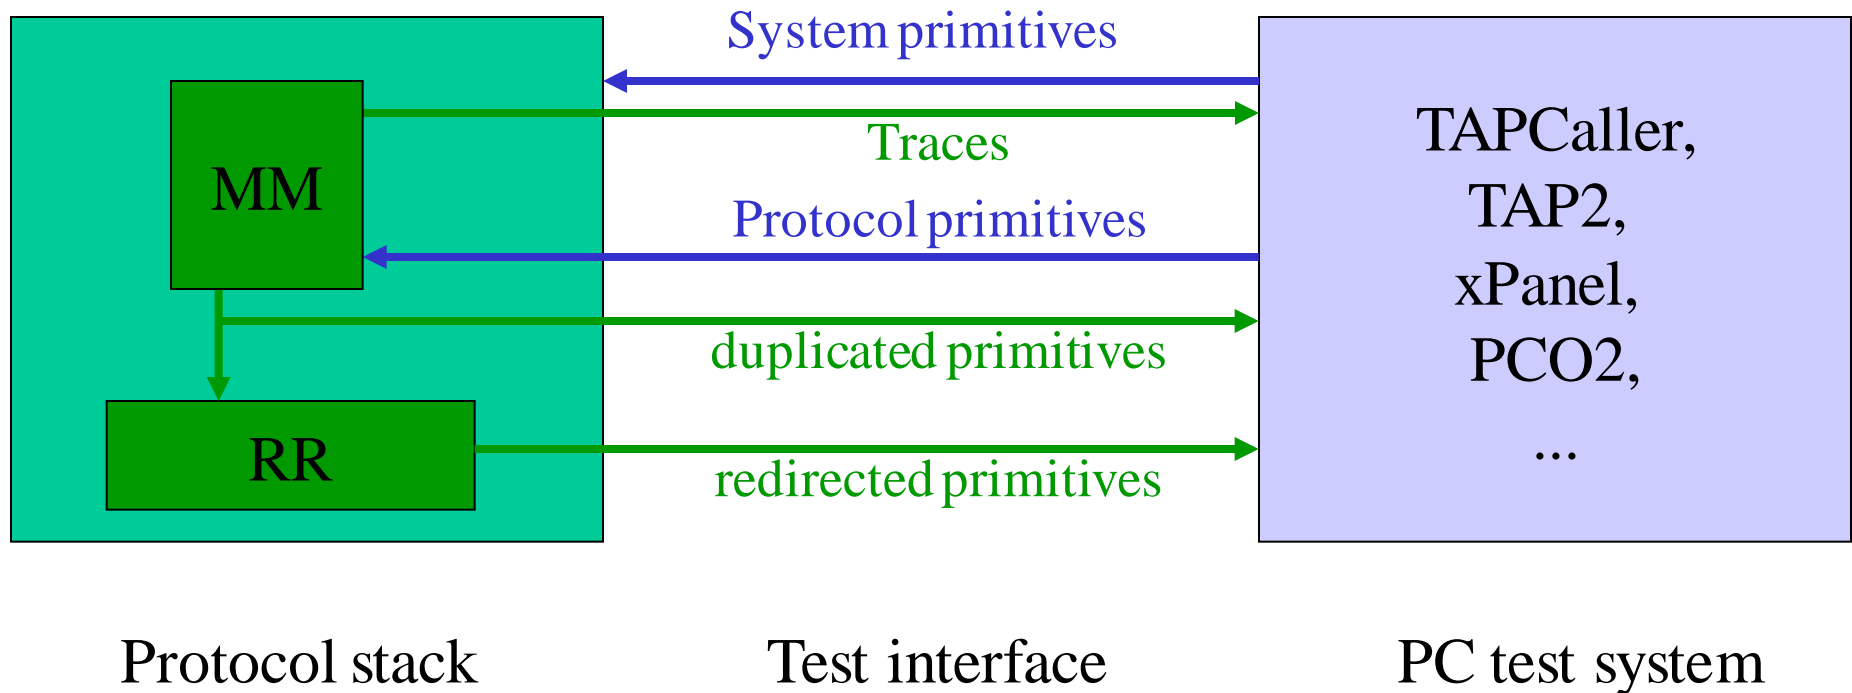

Usage with TAP2 and PC02

Important files

TAPCaller ... *general concept*

- test interface approach:

- ⇒ data interface between G23 protocol stack and a PC test system
- ⇒ for running test cases: usually shared memory on one PC

- On stack side:

- ⇒ test interface entity included in FRAME
- ⇒ uses corresponding hardware driver for communication

- On PC test system side:

- ⇒ test interface executable using the FRAME
 - ◆ connects using standard OS drivers
- ⇒ used by tools like xPanel
- ⇒ .. and of course by TAP2 & PC02

- TAP (Test Application Process):
 - ⇒ program which executes test cases by sending, receiving and comparing primitives to/from the protocol stack
- PCO (Point of Control and Observation):
 - ⇒ tools capable to stimulate the protocol stack and display traces and duplicated primitives
 - ⇒ used here for logging and replaying test sessions
- TAPCaller:
 - ⇒ GUI-tool for easy handling TAP and PCO

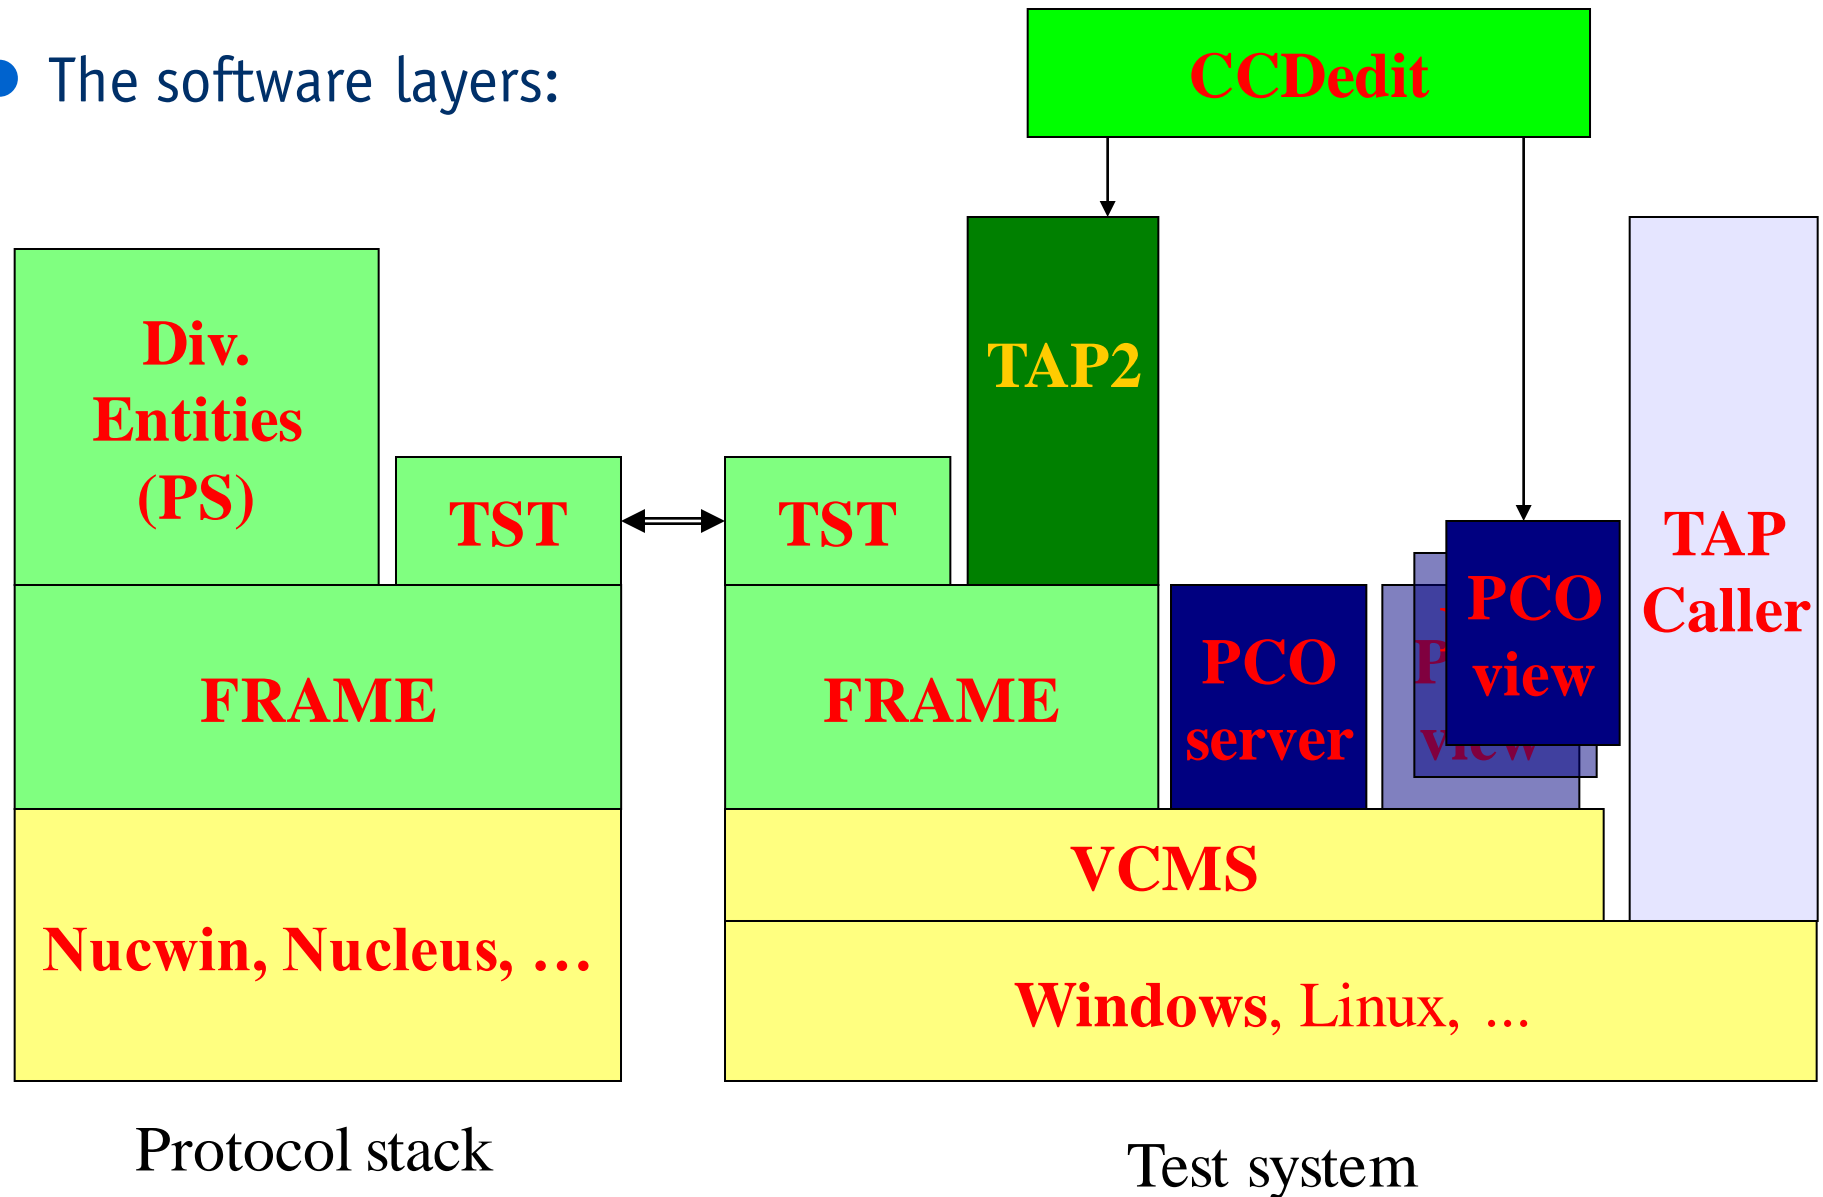

TAPCaller ... *general concept*

- The software layers:

TAPCaller ... *general concept*

- The software layers:

- Build of necessary executables:

- ⇒ before testing some executables have to be (re)build after each run of makcdg:
 - ◆ the protocol stack – in any case ;-)
 - ◆ tap2_{gprs|gsm}.exe (ClearCase: \gpf\BIN\tap2_xxx.exe)
 - old TAP for usage without PC02
 - call gnumake in \gpf\TAP
 - ◆ ccddata_dll.dll (ClearCase: \gpf\BIN\ccddata_dll.dll)
 - used by new TAP2 (tap2.exe) and PC02
 - automatically build by makcdg-script

- Optional modification of test cases:

- ⇒ To receive not only traces but also duplicated primitives while testing ...
- ⇒ ... extra system primitives have to be inserted into the test document (e.g. l2r_steps.cpp)

```
...  
COMMAND ("L2R REDIRECT MMI TAP")  
  |      |      |  
COMMAND ("TAP REDIRECT TAP L2R")  
...
```

```
...  
COMMAND ("L2R DUPLICATE MMI PCO")  
COMMAND ("L2R REDIRECT MMI TAP")  
  |      |      |  
COMMAND ("TAP DUPLICATE TAP PCO")  
COMMAND ("TAP REDIRECT TAP L2R")  
...
```

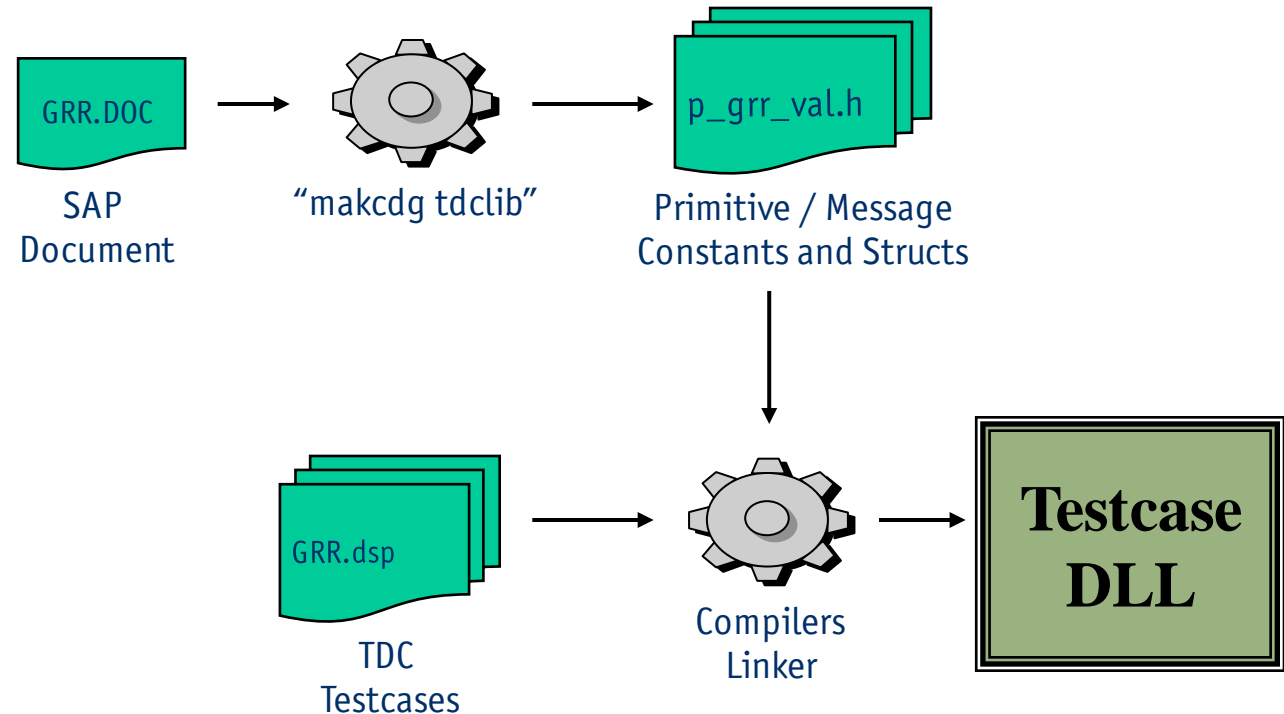

● Build of test cases:

⇒ Generators

- ◆ doc2txt
- ◆ xgen
- ◆ ccdgen

⇒ Compilers

- ◆ msdev / cl
- ◆ (mktc)

⇒ For more informations see:

- ◆ protocol_stack_testing.ppt
- ◆ 8415_028.doc
(ClearCase: \GPF\DOC\8415_028.doc)

TAPCaller ... *preparations*

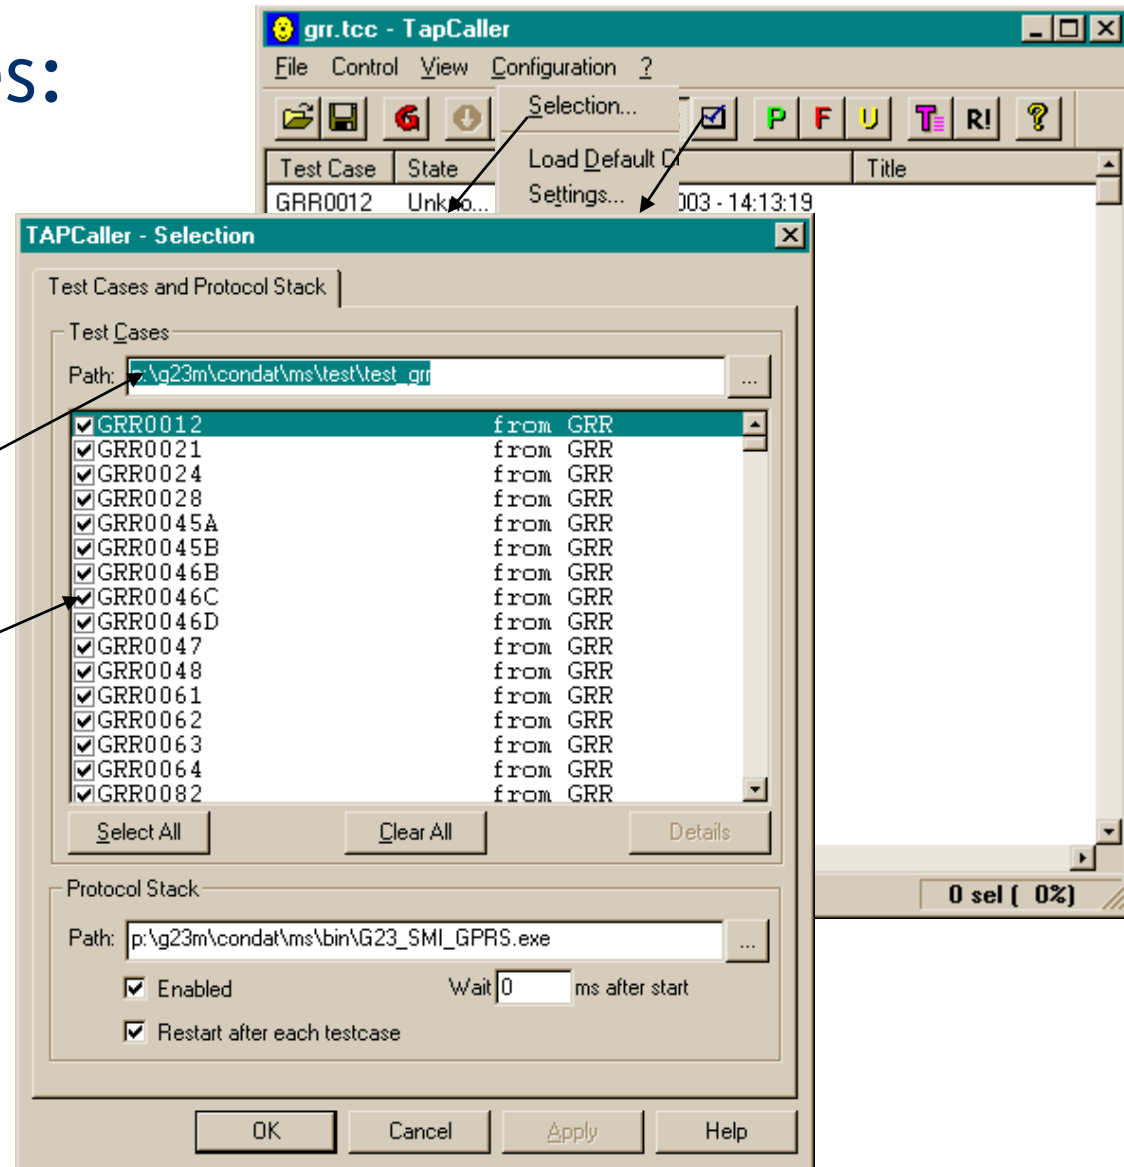

- Selection of test cases:

- ⇒ Start tapcaller.bat

- (ClearCase:
\\gpf\BIN\tapcaller.bat)

- ⇒ choose directory

- ⇒ enable testcases
from DLL(s)

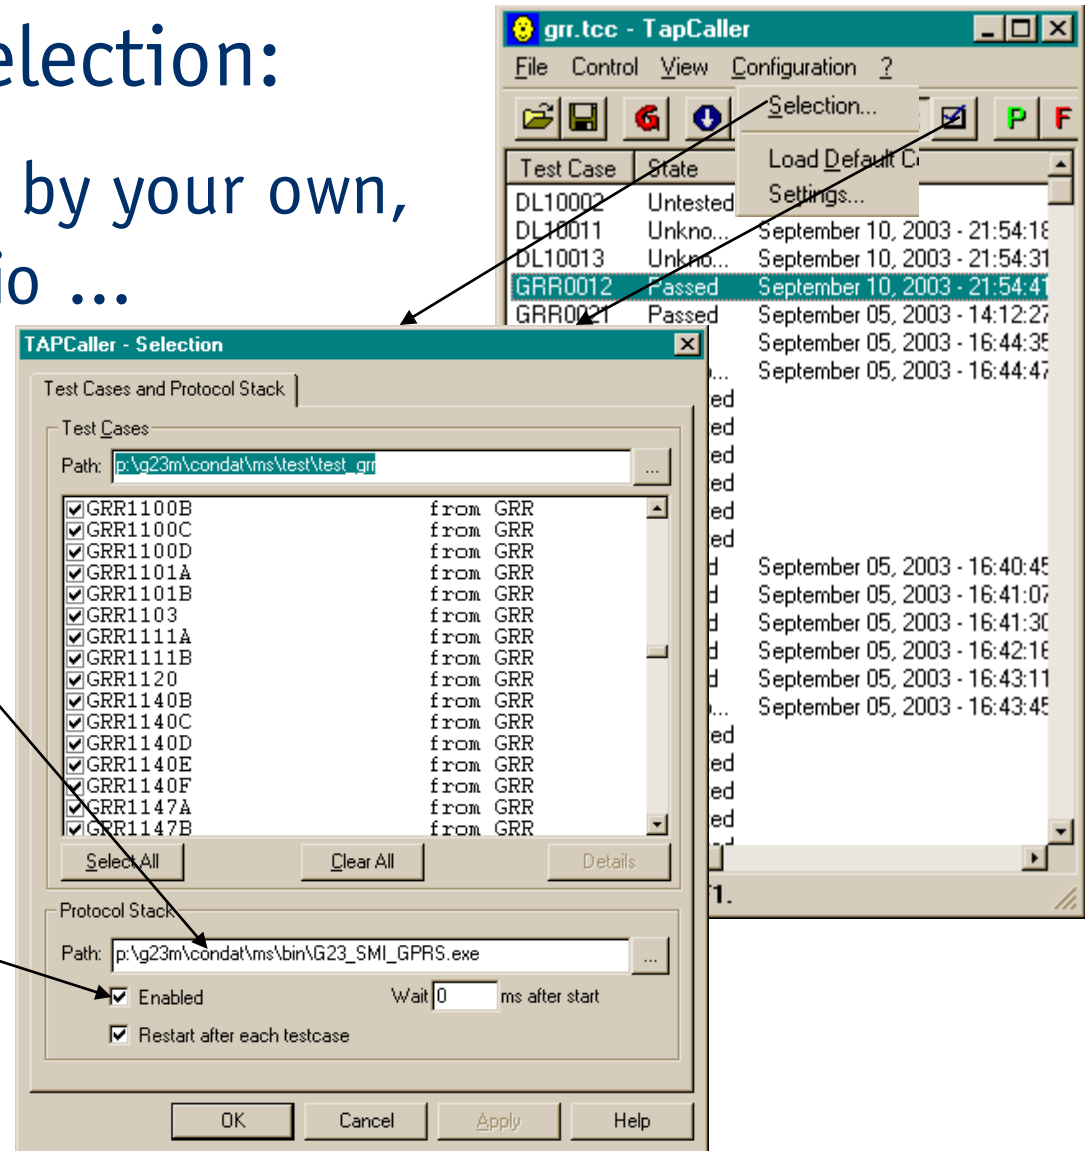

TAPCaller ... *preparations*

- Protocol stack (PS) selection:

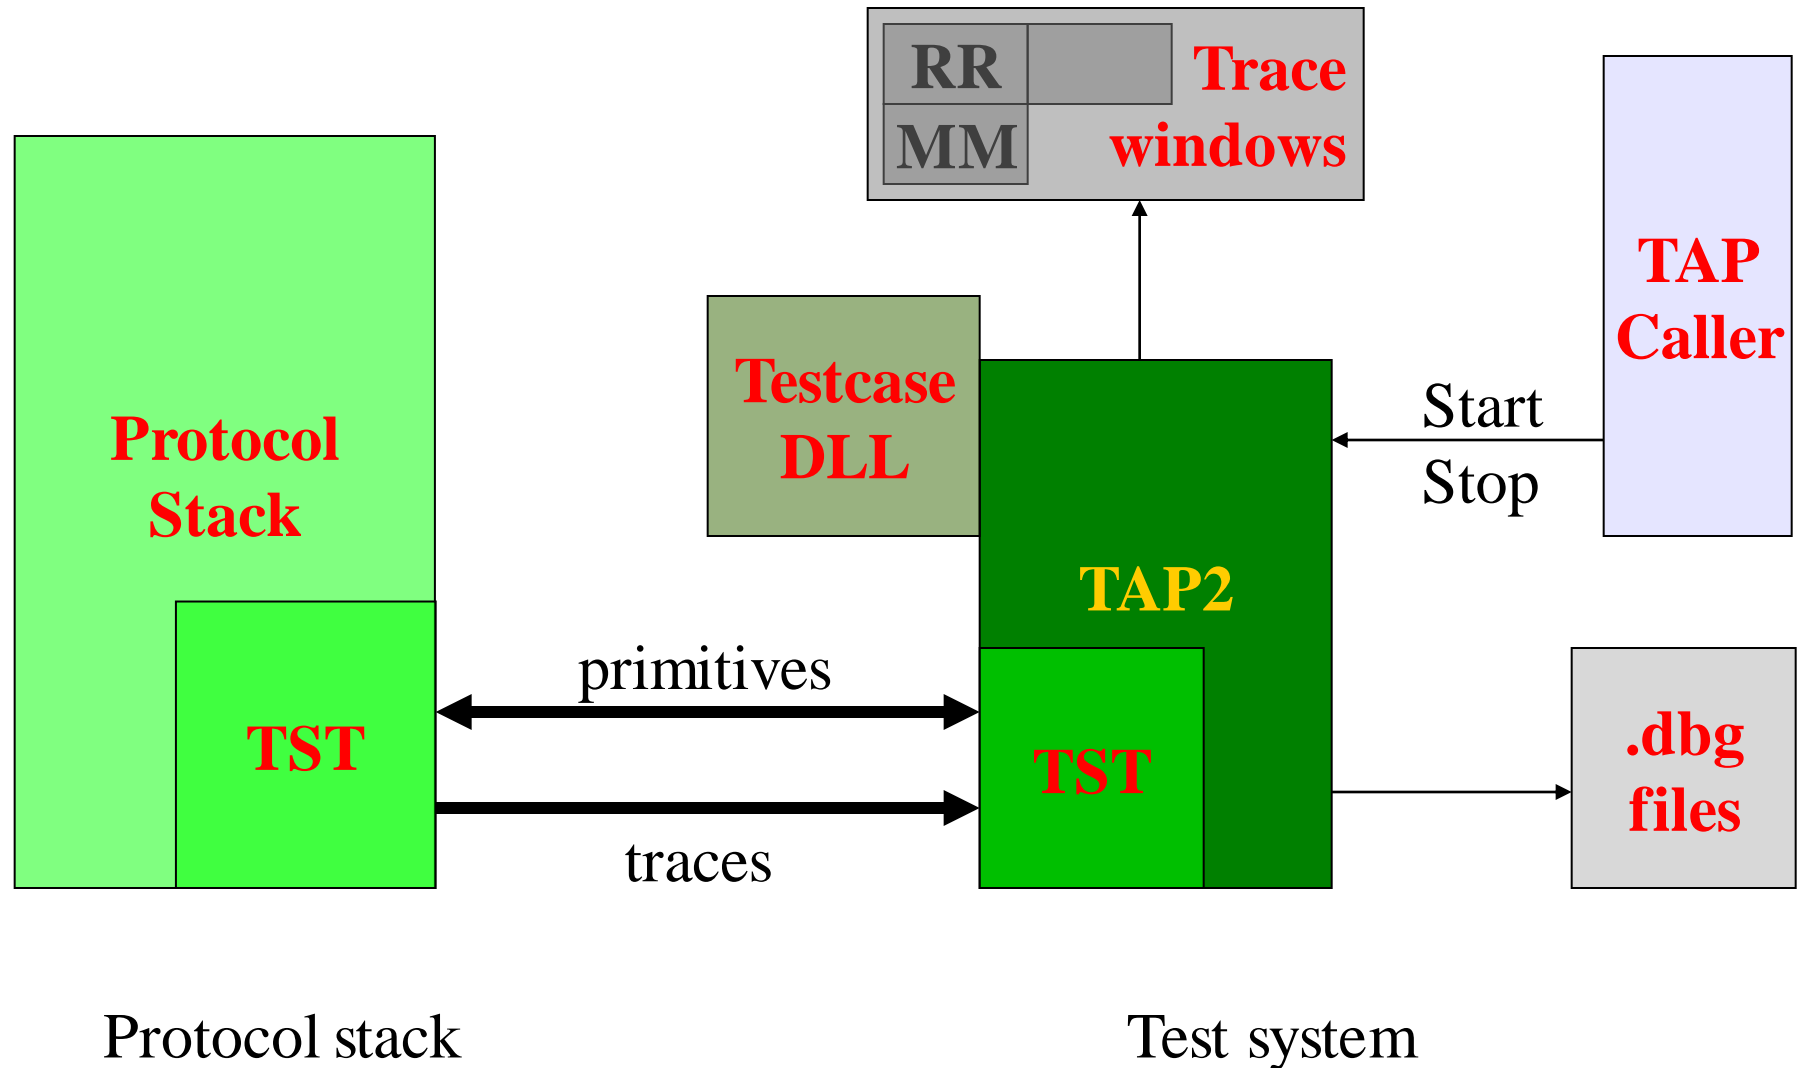

⇒ Start a protocol stack by your own,
e.g. inside VisualStudio ...

⇒ ... or specify an
executable ...

⇒ ... and enable
automatic start of PS
(before each test case
execution)

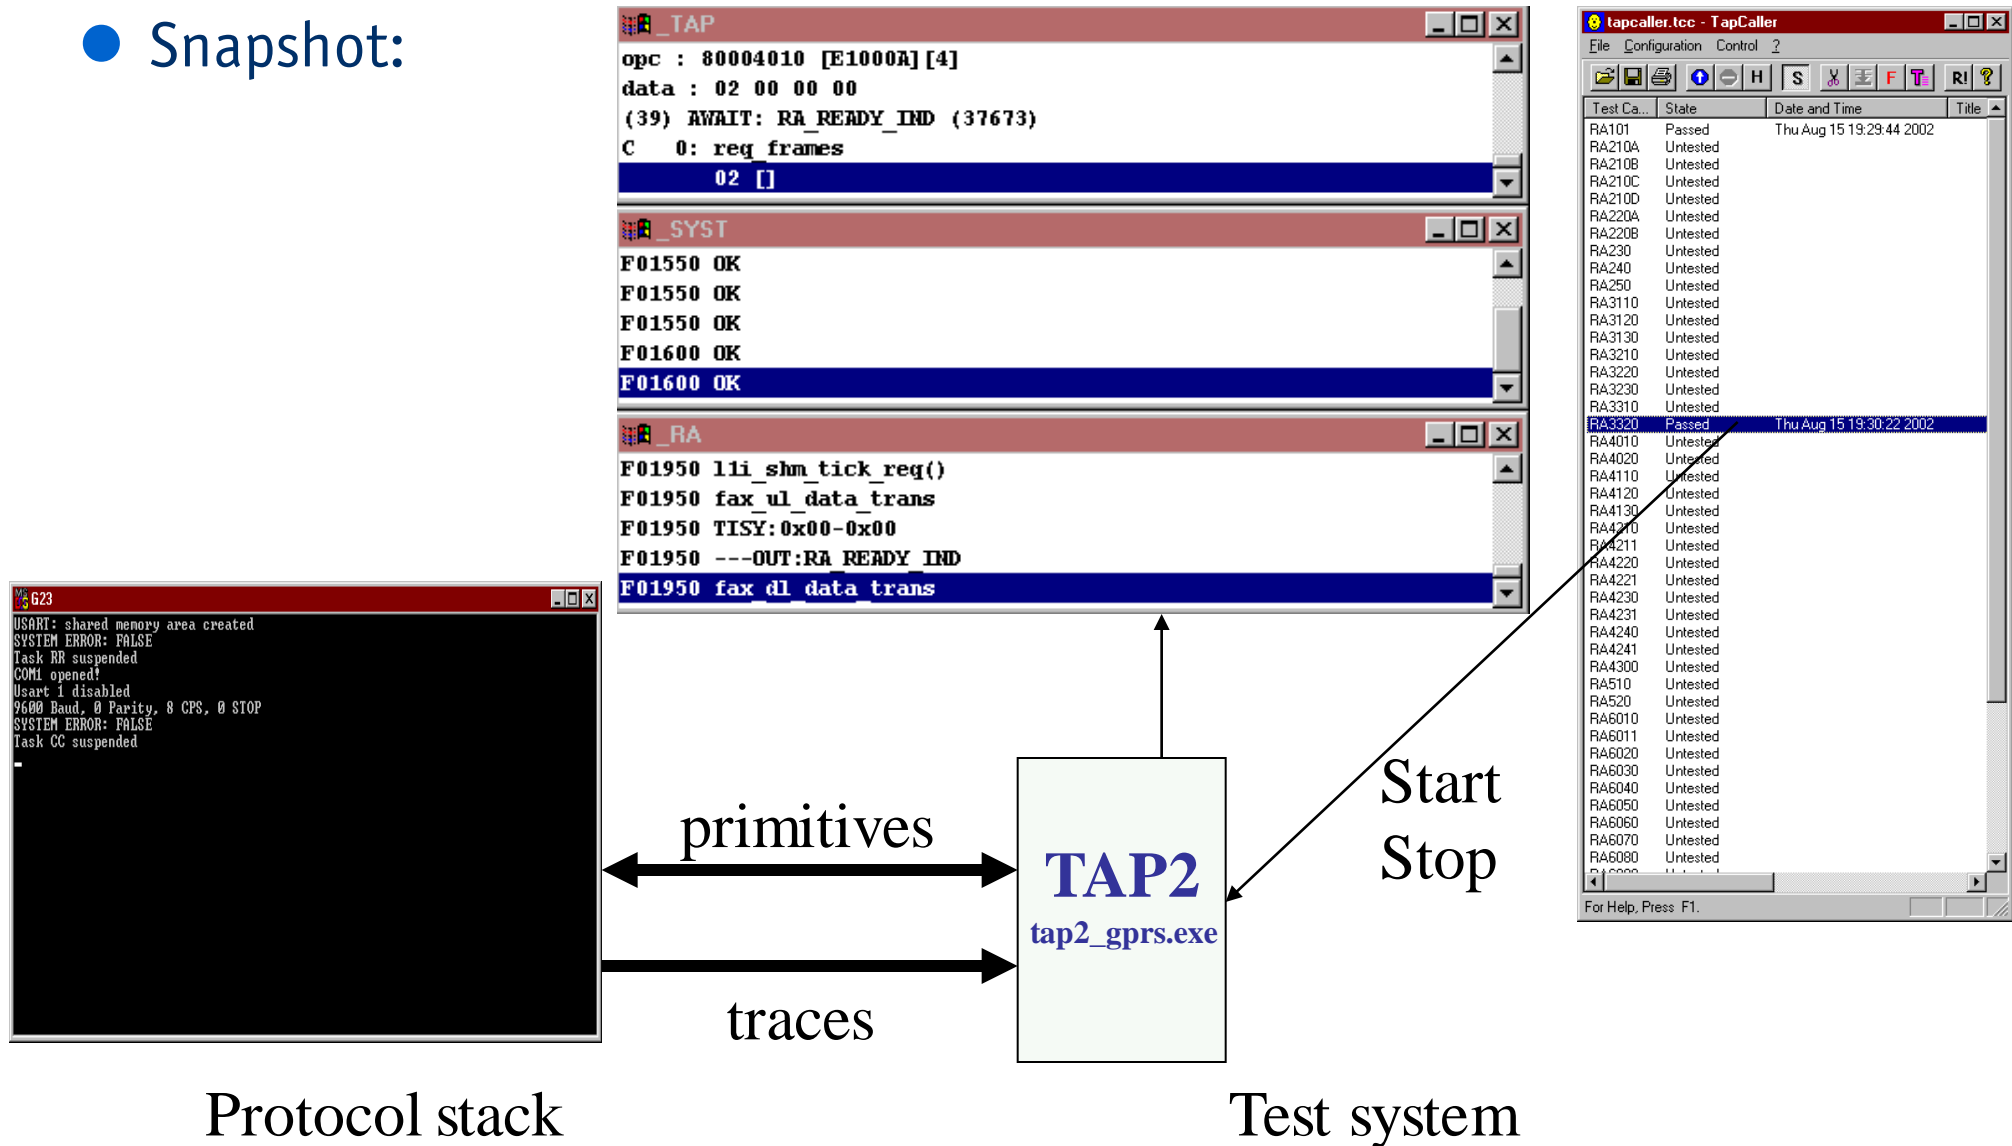

- Data flow:

TAPCaller ... *usage with old TAP*

- Snapshot:

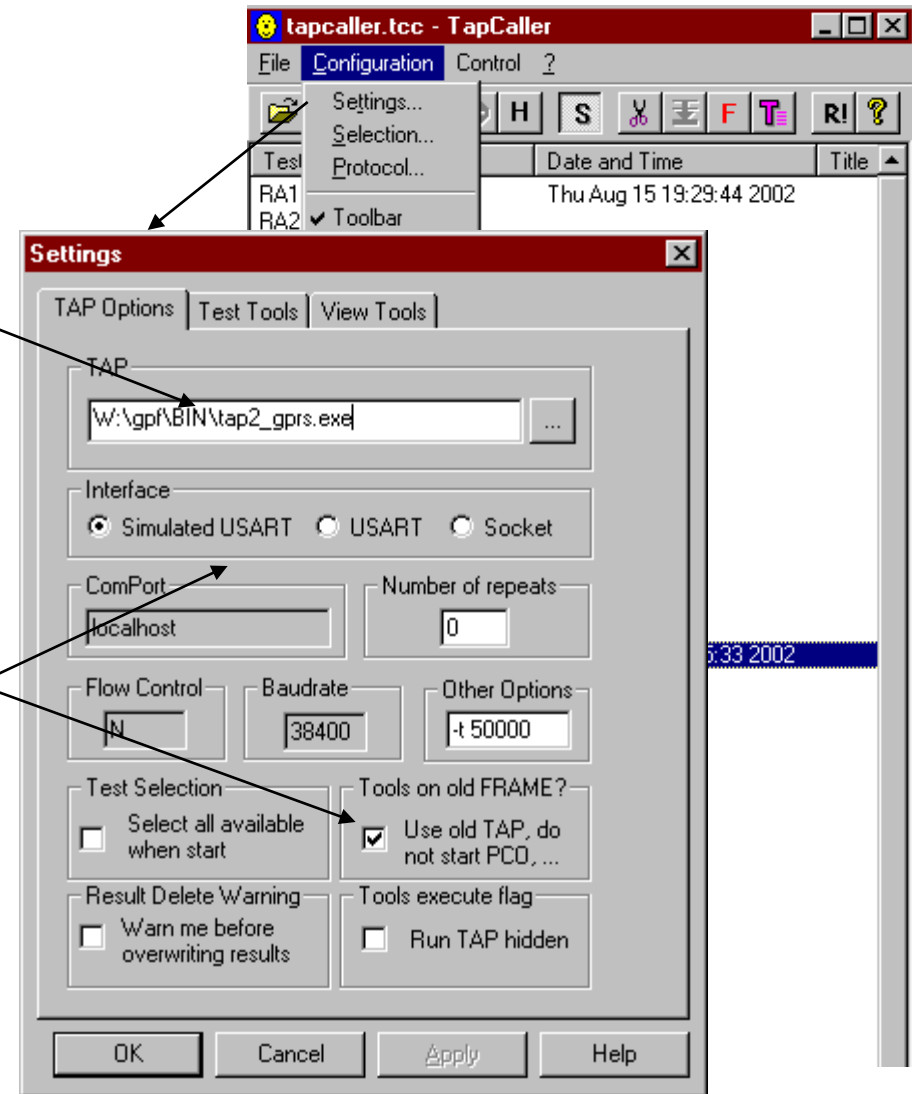

TAPCaller ... *usage with old TAP*

- Configuration:

⇒ select TAP executable
which has to be rebuild
after each makcdg call ...

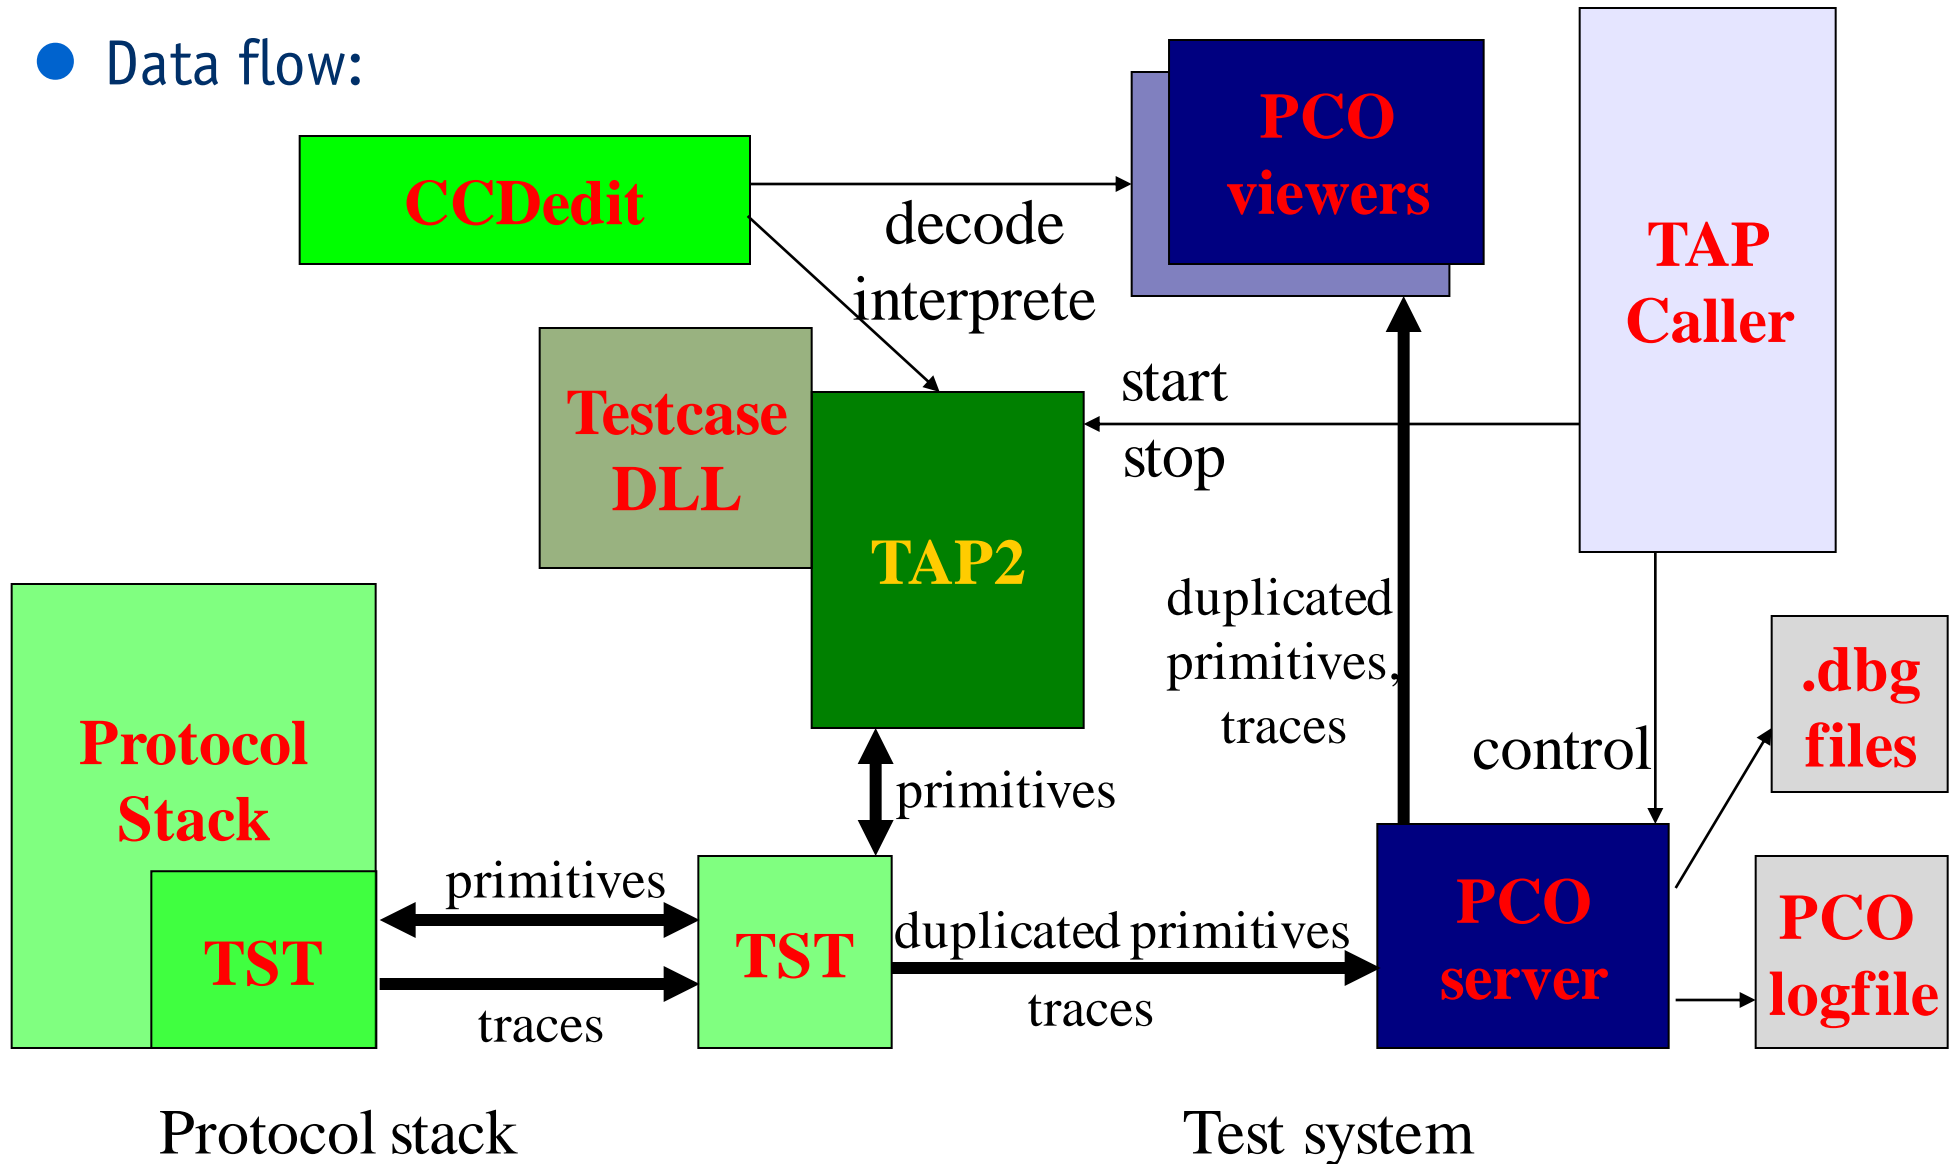

⇒ ... and choose
„old TAP“-mode

⇒ evtl. modify
communication
type, if testing
with a real target

TAPCaller ... usage with TAP2 & PCO2

TAPCaller ... usage with TAP2 & PC02

- Snapshot:
 - ⇒ testcase replay

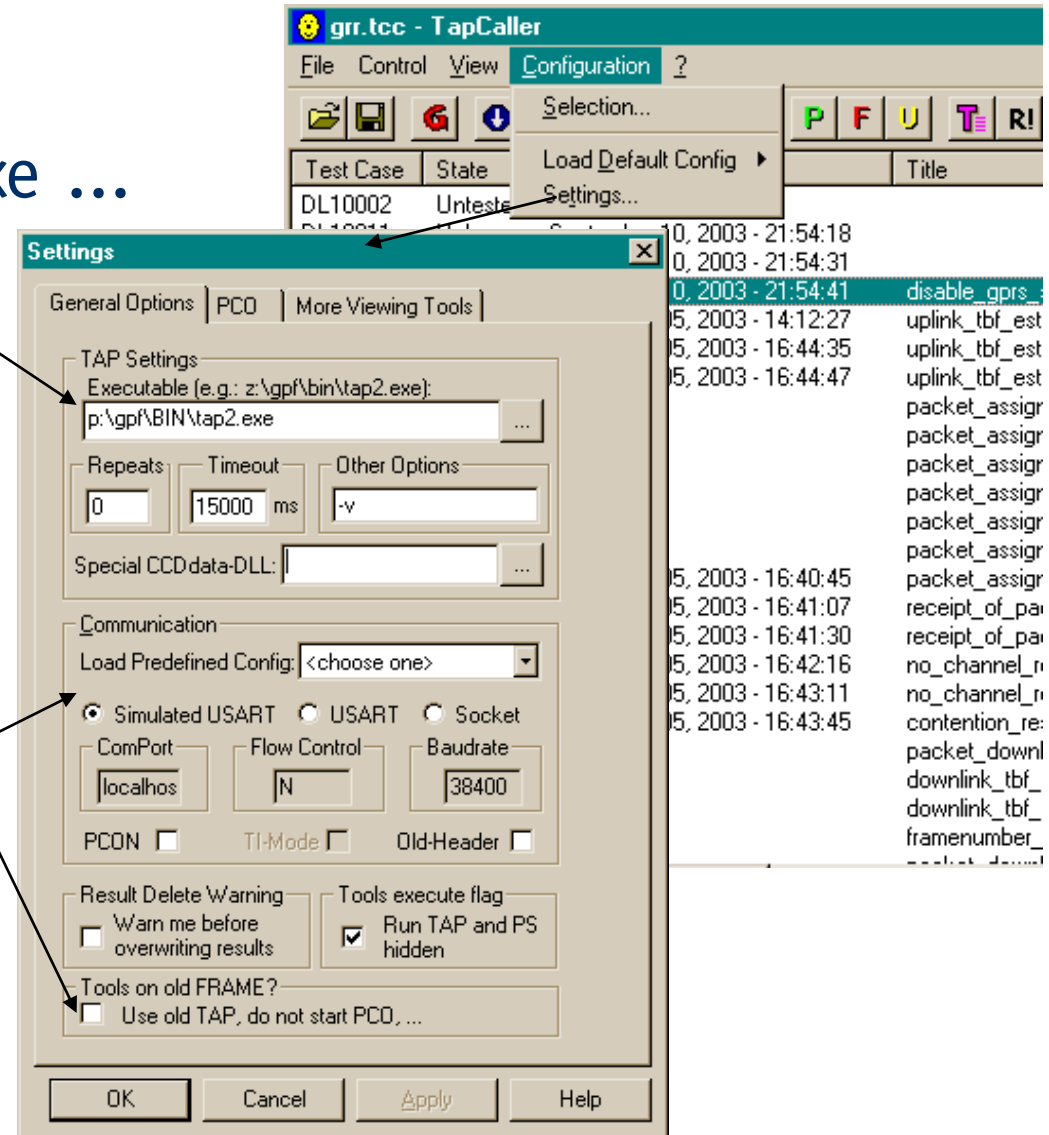

TAPCaller ... usage with TAP2 & PC02

- Configuration (1):

⇒ select path to tap2.exe ...

⇒ ... and deselect
„old TAP“-mode

⇒ evtl. modify
communication
type, if testing
with a real target

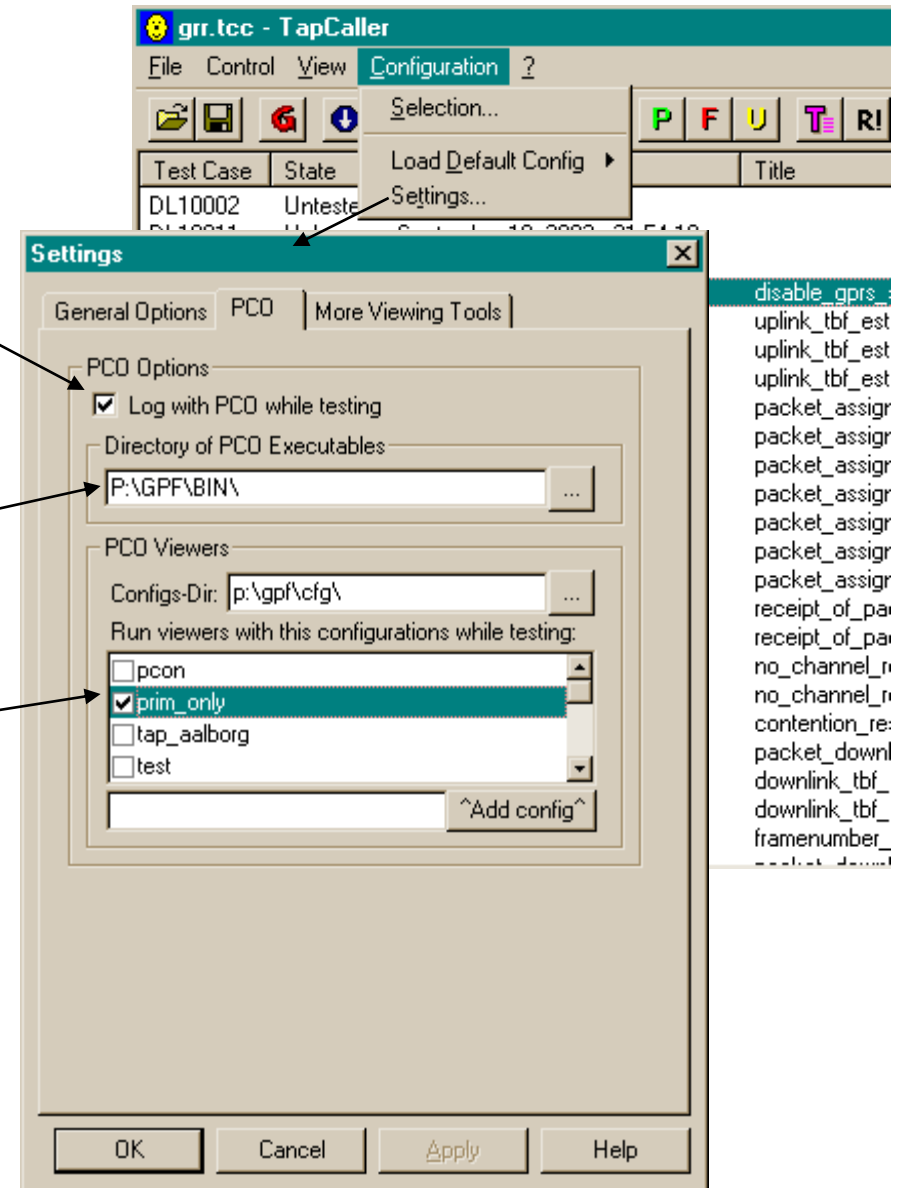

TAPCaller ... usage with TAP2 & PCO2

- Configuration (2):

⇒ enable logging with PCO ...

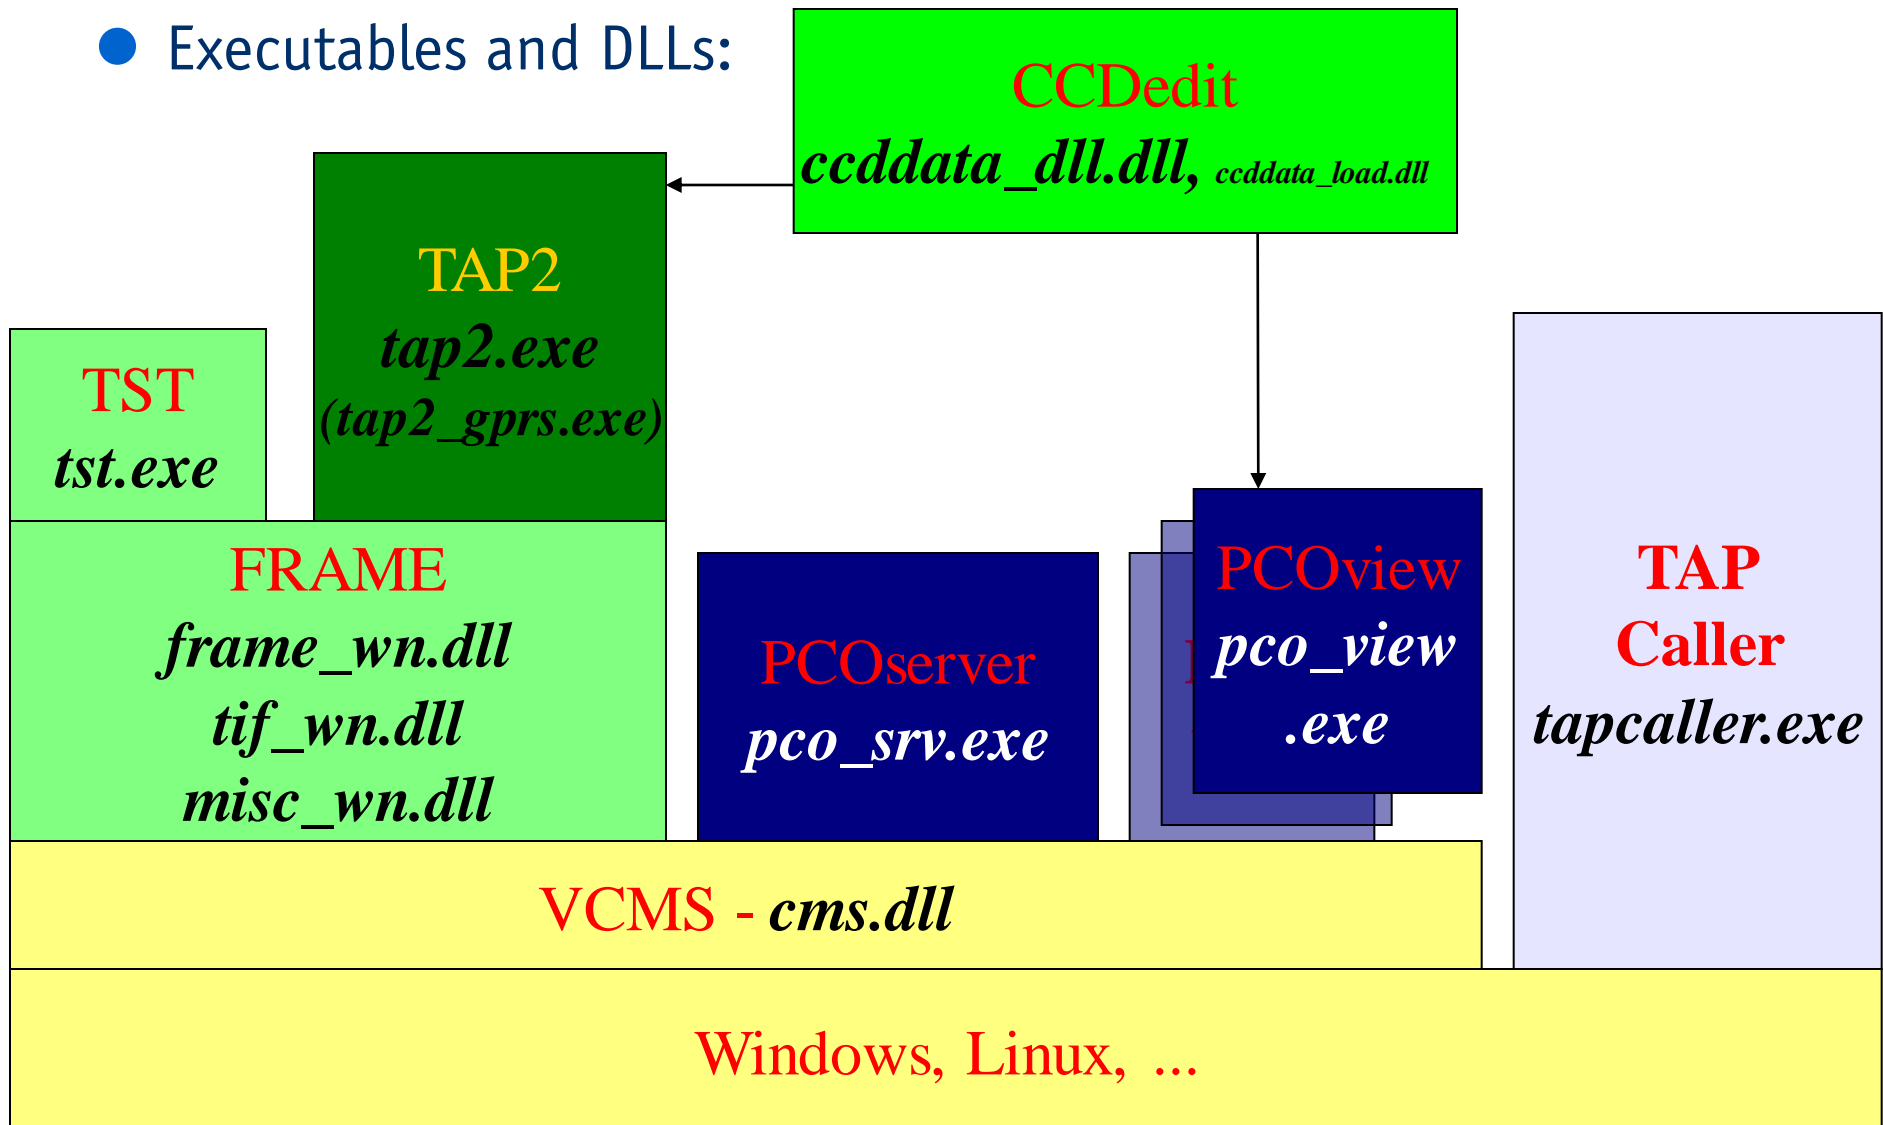

⇒ ... and choose path to PCO executables (should be the same as for tap2.exe)

⇒ evtl. select a viewer configuration, with which a PCO-Viewer should be started while running testcases

TAPCaller ... *important files*

- Executables and DLLs:

TAPCaller ... *important files*

- PCO configuration files:

- ⇒ **pco.ini**

- (ClearCase: \gpf\BIN\pco.ini)

- ◆ contains all settings for the PCO components

```

- ⇒ ***.svc-files**

- ◆ **Standard-Viewer-Configuration files**
 - ◆ **tap.svc.default**
 - > default viewer config, will be copied to tap.svc by tapcaller.bat

- TAPCaller configuration files:

- ⇒ ***.tcc-files**

- ◆ **TAP-Caller-Configuration files**

- Volatile files:
 - ⇒ have to be build together with the used protocol stack
 - ◆ **ccddata_dll.dll** (table with primitive symbols)
 - ◆ **str2ind.tab** (table with trace texts - introduced with GPRS_1.3.2)
- Detailed documentations:
 - ⇒ **tapcaller_userguide.doc**
(ClearCase: \gpf\DOC\tapcaller\tapcaller_userguide.doc)
 - ⇒ **pco_userguide.doc**
(ClearCase: \gpf\DOC\pco\pco_userguide.doc)
 - ⇒ **frame_users_guide.doc**
(ClearCase: \gpf\DOC\frame_users_guide.doc)
 - ⇒ **testplatform_userguide.doc**
(ClearCase: \gpf\DOC\testplatform_usersguide.doc)
 - ⇒ **tapcaller_intro.ppt** (this document)
(ClearCase: \gpf\DOC\tapcaller\tapcaller_intro.ppt)

- Maintenance and versions:

- ⇒ TAPCaller, TAP and PCO are maintained by the GPF-team
- ⇒ delivery is usually done inside the gpf.csi file included in the ConfigSpec of each developer
- ⇒ the very newest version can be obtained by including gpf_testtools.csi right after “mkbranch xxx” (at least before gpf.csi) in the ConfigSpec

- Complaining:

- ⇒ can be done directly by using the “moan”-button in the system tray
- ⇒ see `\gpf\DOC\moanbtn\mbtn_userguide.doc`
