Germany

Date: 01 November 2002
Document No.: 8411.417.98.101
File: ACISAT.DOC

Table of Contents

0	Document Control.....	7
0.1	References	8
0.2	Abbreviations.....	11
0.3	Terms.....	13
1	Overview	14
1.1	RA - Rate Adaptation	14
1.2	RLP - Radio Link Protocol	14
1.3	L2R - Layer 2 Relay Functionality	14
1.4	FAD 03.45 - Fax Adaptation Protocol.....	15
1.5	T.30 - Fax Protocol Entity.....	15
1.6	ACI - AT Command Interpreter.....	15
1.7	USART - Universal Synchronous Asynchronous Receiver Transmitter Driver	15
2	Parameters.....	16
3	TEST CASES please use G23_SMI_GPRS_WAP.exe !!!!!!!!!!!	146
3.1	Routing (internal) (ACISAT001 - ACISAT010)	146
3.1.1	ACISAT001: Setup the Routing and the PCO view for the ACI SAT test.....	146
3.2	Initialisation (ACISAT011 - ACISAT019)	147
3.2.1	ACISAT011: Power On	147
3.2.2	ACISAT012: Power On with various Terminal Profiles	149
3.2.3	ACISAT013: Power On with various received SIM Service Tables.....	152
3.2.4	ACISAT014: Initialisation Ready without Additional SIM Data read	154
3.2.5	ACISAT015: Initialisation Ready with SMS Parameters read from SIM	155
3.3	User Call Setup (ACISAT020-ACISAT059)	158
3.3.1	ACISAT020: Single voice call, with call control by SIM, no modification.....	158
3.3.2	ACISAT021: Second voice call, with call control by SIM, no modification.	160
3.3.3	ACISAT022: Single voice call, with call control by SIM, modified	162
3.3.4	ACISAT023: Single voice call, with call control by SIM, not allowed.....	164
3.3.5	ACISAT024: Single voice call, with call control by SIM, modified to SS transaction.....	166
3.3.6	ACISAT025: Single data call, with call control by SIM, no modification.	167
3.4	User SS Control String (ACISAT060-ACISAT099).....	170
3.4.1	ACISAT060: SS string, with call control by SIM, no modification.....	170
3.4.2	ACISAT061: SS String, with call control by SIM, modified	171
3.4.3	ACISAT062: SS String, with call control by SIM, not allowed	172
3.4.4	ACISAT063: SS String, with call control by SIM, modified to call setup	173
3.4.5	ACISAT064: Accept Modified SAT Call.....	174
3.4.6	ACISAT065: Reject Modified SAT Call.	176
3.5	SAT Send SS (ACISAT100-ACISAT149).....	176
3.5.1	ACISAT100: Send SS, no CC check by SIM, successful.....	176
3.5.2	ACISAT101: Send SS, no CC check by SIM, ME is busy on SS.	177
3.5.3	ACISAT102: Send SS, no CC check by SIM, ME capabilities.	178
3.5.4	ACISAT103: Send SS, no CC check by SIM, error result	179
3.5.5	ACISAT104: Send SS, no CC check by SIM, reject result	179
3.5.6	ACISAT105: Send SS, CC check by SIM, no modification.....	180
3.5.7	ACISAT106: Send SS, CC check by SIM, not allowed.....	182
3.5.8	ACISAT107: Send SS, CC check by SIM, allowed but SS busy.	183
3.5.9	ACISAT108: Send SS, CC check by SIM, no modification but error result	185
3.5.10	ACISAT109: Send SS, CC check by SIM, modification to voice call.....	186
3.5.11	ACISAT110: Reject Modified SAT Call.	187
3.5.12	ACISAT111: Accept Modified SAT Call, connected successfully.	188
3.5.13	ACISAT112: Accept Modified SAT Call, network reject	190
3.5.14	ACISAT113: Accept Modified SAT Call, user abort.....	191
3.5.15	ACISAT114: Send SS, CC check by SIM, modification to voice call with DTMF.	193
3.5.16	ACISAT115: Accept Modified SAT Call with DTMF, connected successfully.	194

3.6	SAT Setup Call (ACISAT150-ACISAT199)	197
3.6.1	ACISAT150: Setup Call, no CC check by SIM, alert user	197
3.6.2	ACISAT151: Reject SAT Call Setup	198
3.6.3	ACISAT152: Accept SAT Call Setup, connected successfully	199
3.6.4	ACISAT153: Accept SAT Call Setup, network reject	201
3.6.5	ACISAT154: Accept SAT Call Setup, user abort	202
3.6.6	ACISAT155: Setup Call, no CC check by SIM, not in idle mode	204
3.6.7	ACISAT156: Second SAT Call Setup, no CC check by SIM, connected successfully	205
3.6.8	ACISAT157: Second SAT Call Setup first call already on hold, no CC check by SIM, connected suc.	207
3.6.9	ACISAT158: Third SAT Call Setup first call already on hold, second call active, no CC check by SIM, beyond ME capability	209
3.6.10	ACISAT159: SAT Call Setup with hold option, during an active data call, no CC check by SIM, beyond ME capability	210
3.6.11	ACISAT160: Second SAT Call Setup, no CC check by SIM, call hold of first call not supported	213
3.6.12	ACISAT161: Third SAT Call Setup disconnect other calls, no CC check by SIM, connected successfully	214
3.6.13	ACISAT162: Setup Call, CC check by SIM, no modification	217
3.6.14	ACISAT163: Setup Call, CC check by SIM, not allowed	219
3.6.15	ACISAT164: Setup Call, CC check by SIM, modified call	220
3.6.16	ACISAT165: Setup Call, CC check by SIM, modified emergency call	221
3.6.17	ACISAT170: Reject Unmodified SAT Call	222
3.6.18	ACISAT171: Accept Unmodified SAT Call, connected successfully	223
3.6.19	ACISAT172: Accept Unmodified SAT Call, network reject	225
3.6.20	ACISAT173: Accept Unmodified SAT Call, user abort	226
3.6.21	ACISAT174: Reject Modified SAT Call	228
3.6.22	ACISAT175: Accept Modified SAT Call, connected successfully	229
3.6.23	ACISAT176: Accept Modified SAT Call, network reject	230
3.6.24	ACISAT177: Accept Modified SAT Call, user abort	232
3.6.25	ACISAT178: Accept Modified SAT Emergency Call, connected successfully	233
3.6.26	ACISAT180: Setup Call, CC check by SIM, modification to SS string	235
3.6.27	ACISAT181: Setup Call, CC check by SIM, modification to SS string, error result	237
3.6.28	ACISAT182: Setup Call, CC check by SIM, modification to SS string, ME capability	238
3.6.29	ACISAT183: Setup Call, CC check by SIM, modification to SS string, SS busy	239
3.6.30	ACISAT184: Setup Call, CC check by SIM, modification to SS string, test long length coding	241
3.6.31	ACISAT185: Setup Call with DTMF tones, no CC check by SIM, alert user	243
3.6.32	ACISAT186: Accept SAT Call Setup with DTMF tones, connected successfully	244
3.6.33	ACISAT187: Setup Call with Redial, no CC check by SIM, alert user	247
3.6.34	ACISAT188: Accept SAT Call Setup with redialling, network reject	248
3.6.35	ACISAT191: Setup Call, only if not currently busy on another call with redial	250
3.6.36	ACISAT192: Setup Call, CC check by SIM, respond with '90 00'	251
3.6.37	ACISAT193: Setup Call, CC check by SIM, respond with '93 00' or different error	253
3.6.38	ACISAT194: Accept SAT Call Setup, disconnect previous call	254
3.6.39	ACISAT195: Second SAT Call Setup, set first call on hold	258
3.6.40	ACISAT196: Second SAT Call Setup, set first call on hold failed	260
3.6.41	ACISAT197: Setup Call, only if not currently busy on another call	262
3.6.42	ACISAT198: Setup Call, only if not currently busy on another call with redial	264
3.6.43	ACISAT199: Setup Call, only if not currently busy on another call with redial	265
3.7	SAT abnormal cases (ACISAT200-ACISAT249)	266
3.7.1	ACISAT200: SAT command with unknown tag, comprehension not required	266
3.7.2	ACISAT201: SAT command with unknown tag, comprehension required	267
3.8	SAT remote user interface (ACISAT250-ACISAT299)	268
3.8.1	ACISAT250: SAT configuration	268
3.8.2	ACISAT251: Envelope command by user	270
3.8.3	ACISAT252: User response to SAT command	271
3.8.4	ACISAT253: User terminates session or command	272
3.9	SAT Proactive Command REFRESH (ACISAT300-ACISAT329)	273
3.9.1	ACISAT301: SIM Reset Check Signal	273
3.9.2	ACISAT302: SIM Activation after REFRESH: Check Signal	274

3.9.3	ACISAT311: Unsolicited Reception of SIM_MMI_INSERT_IND	276
3.9.4	ACISAT312: Initialisation Ready without Additional SIM Data read	277
3.9.5	ACISAT313: Initialisation Ready with SMS Parameters read from SIM	280
3.9.6	ACISAT321: SAT File Change Notification: no Update Required	283
3.9.7	ACISAT322: SAT File Change Notification: Update Required for SMS/CBCH Parameters	284
3.9.8	ACISAT323: SAT File Change Notification: Update Required for LP, AD and Phonebook Parameters	287
3.9.9	ACISAT324: SAT File Change Notification: Update Required for AD and ACM Parameters	290
3.10	CB Data Download	292
3.10.1	ACISAT331: CB Message received: Mess Id found in EF(CBMID): Transfer to SIM	292
3.10.2	ACISAT332: CB Message received: Mess ID not found in EF(CBMID): No Transfer to SIM	293
3.10.3	ACISAT333: CB Message received: Mess Id found in EF(CBMID): same CBM page	295
3.10.4	ACISAT334: CB Message received: Mess Id found in EF(CBMID): other CBM page	297
3.10.5	ACISAT335: CB Message received: Mess Id found in EF(CBMID): a 3 rd and 4 th different CBM page	299
3.10.6	ACISAT336: CB Message received: MessId found in EF(CBMID): same identifiers, but other page number	300
3.10.7	ACISAT337: CB Message received: more CBM downloaded than can be saved in list	301
3.10.8	ACISAT338: CB Message received: more CBM downloaded than can be saved in list and update some	304
3.11	SAT Proactive Command SEND SHORT MESSAGE	306
3.11.1	ACISAT341: SAT Request for SEND SM	306
3.11.2	ACISAT342: SAT Request for SEND SM (Long Message)	307
3.11.3	ACISAT343: SAT Request for SEND SM	308
3.12	SAT Proactive Command SETUP EVENT LIST	309
3.12.1	ACISAT350: SAT Request for SETUP EVENT LIST	309
3.12.2	ACISAT351: MO single voice call with event monitored	310
3.12.3	ACISAT352: Disconnect single voice call with event monitored	312
3.13	MO SMS Control from SIM	313
3.13.1	ACISAT360: Set Text Mode Format	313
3.13.2	ACISAT361: Select Service Center Address	313
3.13.3	ACISAT362: Send Short Message with SIM Control (Part 1)	314
3.13.4	ACISAT363: Send Short Message with MO-SM Control by SIM: allowed	315
3.13.5	ACISAT364: Send Short Message with MO-SM Control by SIM: not allowed	316
3.13.6	ACISAT365: Send Message From Memory	317
3.13.7	ACISAT366: Send Message From Memory (with READ_REQ/CNF)	319
3.13.8	ACISAT367: SAT Request for SEND SM with MO-SM Control by SIM	321
3.14	SAT Send USSD (ACISAT370-ACISAT)	322
3.14.1	ACISAT370: Send USSD, no CC check by SIM, successful.	322
3.14.2	ACISAT371: Send USSD, no CC check by SIM, ME is busy on SS.	323
3.14.3	ACISAT372: Send USSD, no CC check by SIM, error result.	323
3.14.4	ACISAT373: Send USSD, no CC check by SIM, reject result.	324
3.14.5	ACISAT374: Send USSD, no CC check by SIM, received fac_inf is empty.	325
3.15	SAT Send DTMF (ACISAT380-ACISAT)	326
3.15.1	ACISAT380: Send DTMF.	326
3.16	SAT Run AT command (ACISAT390)	328
3.16.1	ACISAT390: Run at, AT+CSNS	328
3.16.2	ACISAT391: Run at, AT+COPS?, buffered responses.	329
3.17	SAT Provide Local Information (ACISAT400)	330
3.17.1	ACISAT400: Provide Local Information, date-time and time zone	330
3.18	SAT Launch Browser (ACISAT401)	331
3.18.1	ACISAT401: LAUNCH BROWSER command received from SAT	331
3.19	SAT Receive Data command (ACISAT405-)	332
3.19.1	ACISAT405: RECEIVE DATA, notification to APL	332
3.20	SAT Send Data command (ACISAT410-)	333
3.20.1	ACISAT410: SEND DATA, on-demand, notification to APL	333
3.20.2	ACISAT411: SEND DATA, immediate, notification to APL	333
3.20.3	ACISAT412: SEND DATA establishment, CSD, rejected by network	335
3.20.4	ACISAT413: SEND DATA establishment, CSD, PPP_TERMINATE_IND received before PPP_ESTABLISH_CNF	337
3.20.5	ACISAT414: SEND DATA establishment, CSD, L2R_DISC_IND received at once after L2R_CONNECT_CNF	340

3.20.6	ACISAT415: SEND DATA establishment, CSD, L2R_DISC_IND received at once after L2R_CONNECT_CNF FAIL	343
3.20.7	ACISAT416: SEND DATA establishment, CSD, L2R_ERROR_IND received at once after L2R_CONNECT_CNF	345
3.20.8	ACISAT417: SEND DATA establishment, CSD, L2R_ERROR_IND received at once after L2R_CONNECT_CNF FAIL	348
3.20.9	ACISAT418: SEND DATA, User clears down CSD establishment, UDP	350
3.20.10	ACISAT419: SEND DATA establishment, GPRS, rejected by network FAIL	353
3.20.11	ACISAT420: SEND DATA establishment, CSD/GPRS, SIM disconnect after SIM failure D and E FAIL	354
3.21	SAT Get Channel Status command (ACISAT425-)	356
3.21.1	ACISAT425: GET CHANNEL STATUS request by SIM, notification to APL, response to SIM	356
3.22	SAT Open Channel command (ACISAT430-4)	357
3.22.1	ACISAT430: OPEN CHANNEL command received from SAT	357
3.22.2	ACISAT431: OPEN CHANNEL CSD with call control by SIM	360
3.22.3	ACISAT432: User accepts OPEN CHANNEL command	361
3.22.4	ACISAT433: User rejects OPEN CHANNEL command	363
3.22.5	ACISAT434: OPEN CHANNEL command not allowed by CC SIM.	365
3.22.6	ACISAT435: Termination for OPEN CHANNEL command, on-demand	366
3.22.7	ACISAT440: OPEN CHANNEL/SEND DATA establishment, CSD, successful (call setup part)	368
3.22.8	ACISAT441: OPEN CHANNEL/SEND DATA establishment, CSD/GPRS, successful (UDP activation part)	371
3.22.9	ACISAT442: OPEN CHANNEL/SEND DATA establishment, CSD, successful (RA part)	372
3.22.10	ACISAT443: OPEN CHANNEL/SEND DATA establishment, CSD, successful (L2R part)	374
3.22.11	ACISAT444: OPEN CHANNEL/SEND DATA establishment, CSD, successful (TRA part)	376
3.22.12	ACISAT445: OPEN CHANNEL/SEND DATA establishment, CSD, successful (PPP activation part)	377
3.22.13	ACISAT446: OPEN CHANNEL/SEND DATA establishment, CSD/GPRS, successful (UDP configuration)	379
3.22.14	ACISAT447: OPEN CHANNEL/SEND DATA establishment, CSD/GPRS, suc/unsuc (SIM connect) C, D, E, H, I, J, M, N, O, P, R, T, V, X FAIL	380
3.22.15	ACISAT448: OPEN CHANNEL establishment, CSD/GPRS, suc/unsuc (command termination)	389
3.22.16	ACISAT449: OPEN CHANNEL establishment, CSD, rejected by network	391
3.22.17	ACISAT450: OPEN CHANNEL establishment, CSD, user abort	393
3.22.18	ACISAT451: OPEN CHANNEL establ, CSD, PPP_TERMINATE_IND received before PPP_ESTABLISH_CNF	395
3.22.19	ACISAT452: OPEN CHANNEL establ, CSD, L2R_DISC_IND received at once after L2R_CONNECT_CNF	397
3.22.20	ACISAT453: OPEN CHANNEL establ, CSD, L2R_DISC_IND received at once after L2R_CONNECT_CNF	400
3.22.21	ACISAT454: OPEN CHANNEL establ, CSD, L2R_ERROR_IND received at once after L2R_CONNECT_CNF	403
3.22.22	ACISAT455: OPEN CHANNEL establ, CSD, L2R_ERROR_IND received at once after L2R_CONNECT_CNF	405
3.22.23	ACISAT456: OPEN CHANNEL unsuccessful (command termination)	408
3.22.24	ACISAT457: OPEN CHANNEL/SEND DATA establishment, GPRS, successful (context activation) B FAIL	409
3.22.25	ACISAT458: OPEN CHANNEL establishment, GPRS, rejected by network FAIL	411
3.22.26	ACISAT459: OPEN CHANNEL/SEND DATA establishment, GPRS, successful (SNDP switch)	413
3.22.27	ACISAT460: OPEN CHANNEL, suspend/resume of GPRS channel	414
3.22.28	ACISAT461: OPEN CHANNEL SIM disconnect after SIM connection failure	418
3.22.29	ACISAT462: OPEN CHANNEL/SEND DATA establishment, CSD, successful (L2R part)	420
3.22.30	ACISAT463: OPEN CHANNEL/SEND DATA establishment, GPRS, successful (context activation)	421
3.23	SAT Close Channel command (ACISAT 470-)	423
3.23.1	ACISAT470: CLOSE CHANNEL, notification to APL	423
3.23.2	ACISAT471: CLOSE CHANNEL disconnect, CSD/GPRS, successful (SIM disconnect) G to J FAIL	425
3.23.3	ACISAT472: CLOSE CHANNEL disconnect, CSD, successful (PPP disconnect) variant F FAIL	426
3.23.4	ACISAT473: CLOSE CHANNEL disconnect, CSD/GPRS, successful (UDP disconnect) all variants FAIL	427
3.23.5	ACISAT474: CLOSE CHANNEL disconnect, CSD, successful (L2R disconnect) All FAIL	430
3.23.6	ACISAT475: CLOSE CHANNEL disconnect, CSD, successful (RA disconnect) All FAIL	431
3.23.7	ACISAT476: CLOSE CHANNEL disconnect, CSD, successful (Call disconnect) All FAIL	432
3.23.8	ACISAT477: CLOSE CHANNEL disconnect, GPRS, successful (context deactivation) C to F and I and J FAIL	433
3.23.9	ACISAT478: CLOSE CHANNEL disconnect, CSD, successful (L2R part, best cases) All FAIL	434
3.23.10	ACISAT479: CLOSE CHANNEL disconnect, CSD, successful (TRA part)	436
3.23.11	ACISAT480: Unsolicited Problem Report from SIM	437
3.23.12	ACISAT481: CLOSE CHANNEL disconnect, CSD, successful (L2R part, worse case immediate)	438

3.23.13	ACISAT482: CLOSE CHANNEL disconnect, CSD, successful (L2R part, worse case on demand)	All FAIL.....	440
3.23.14	ACISAT483: CLOSE CHANNEL disconnect, CSD, , SIM disconnect after SIM failure (TRA part)	FAIL	442
3.24	SAT Channel Status Event (ACISAT 490-)		443
3.24.1	ACISAT490: Channel Status Event Setup		443
3.24.2	ACISAT491: Channel Status Event, CSD break down		444
3.24.3	ACISAT492: Channel Status Event, indication	FAIL	445

0.2 Abbreviations

ACI	AT Command Interpreter
AGCH	Access Grant Channel
AT	Attention sequence "AT" to indicate valid commands of the ACI
BCCH	Broadcast Control Channel
BCS	Binary Coded Signals
BS	Base Station
BSIC	Base Station Identification Code
C/R	Command/Response
C1	Path Loss Criterion
C2	Reselection Criterion
CBCH	Cell Broadcast Channel
CBQ	Cell Bar Qualify
CC	Call Control
CCCH	Common Control Channel
CCD	CondatCoder Decoder
CKSN	Ciphering Key Sequence Number
CRC	Cyclic Redundancy Check
DCCH	Dedicated Control Channel
DISC	Disconnect Frame
DL	Data Link Layer
DM	Disconnected Mode Frame
DTX	Discontinuous Transmission
EA	Extension Bit Address Field
EL	Extension Bit Length Field
EMMI	Electrical Man Machine Interface
EOL	End Of Line
F	Final Bit
F&D	Fax and Data Protocol Stack
FACCH	Fast Associated Control Channel
FHO	Forced Handover
GP	Guard Period
GSM	Global System for Mobile Communication
HDLC	High level Data Link Control
HISR	High level Interrupt Service Routine
HPLMN	Home Public Land Mobile Network
I	Information Frame
IMEI	International Mobile Equipment Identity
IMSI	International Mobile Subscriber Identity
ITU	International Telecommunication Union
IWF	Interworking Function
Kc	Authentication Key
L	Length Indicator
LAI	Location Area Information
LISR	Low level Interrupt Service Routine
LPD	Link Protocol Discriminator
M	More Data Bit
MCC	Mobile Country Code

MM	Mobility Management
MMI	Man Machine Interface
MNC	Mobile Network Code
MS	Mobile Station
MSG	Message phase in the GSM 3.45 protocol
N(R)	Receive Number
N(S)	Send Number
NCC	National Colour Code
NECI	New Establishment Causes included
OTD	Observed Time Difference
P	Poll Bit
P/F	Poll/Final Bit
PCH	Paging Channel
PCO	Point of Control and Observation
PDU	Protocol Description Unit
PL	Physical Layer
PLMN	Public Land Mobile Network
RACH	Random Access Channel
REJ	Reject Frame
RNR	Receive Not Ready Frame
RR	Radio Resource Management
RR	Receive Ready Frame
RTD	Real Time Difference
RTOS	Real Time Operating System
SABM	Set Asynchronous Balanced Mode
SACCH	Slow Associated Control Channel
SAP	Service Access Point
SAPI	Service Access Point Identifier
SDCCH	Slow Dedicated Control Channel
SIM	Subscriber Identity Module
SMS	Short Message Service
SMSCB	Short Message Service Cell Broadcast
SS	Supplementary Services
T.4	CCITT Standardisation for Document coding of Group 3 Facsimile Apparatus
TAP	Test Application Program
TCH	Traffic Channel
TCH/F	Traffic Channel Full Rate
TCH/H	Traffic Channel Half Rate
TDMA	Time Division Multiple Access
TE	Terminal Equipment - e. g. a PC
TMSI	Temporary Mobile Subscriber Identity
UA	Unnumbered Acknowledgement Frame
UI	Unnumbered Information Frame
V(A)	Acknowledgement State Variable
V(R)	Receive State Variable
V(S)	Send State Variable
VPLMN	Visiting Public Land Mobile Network

0.3 Terms

Entity:	Program which executes the functions of a layer
Message:	A message is a data unit which is transferred between the entities of the same layer (peer-to-peer) of the mobile and infrastructure side. Message is used as a synonym to protocol data unit (PDU). A message may contain several information elements.
Primitive:	A primitive is a data unit which is transferred between layers on one component (mobile station or infrastructure). The primitive has an operation code which identifies the primitive and its parameters.
Service Access Point	A Service Access Point is a data interface between two layers on one component (mobile station or infrastructure).

1 Overview

The Protocol Stacks are used to define the functionality of the GSM protocols for interfaces. The GSM specifications are normative when used to describe the functionality of interfaces, but the stacks and the subdivision of protocol layers does not imply or restrict any implementation.

The protocol stack for fax and data transmission consists of several entities. Each entity has one or more service access points, over which the entity provides a service for the upper entity. The entity, which is described in this document, is coloured grey in the following figure :

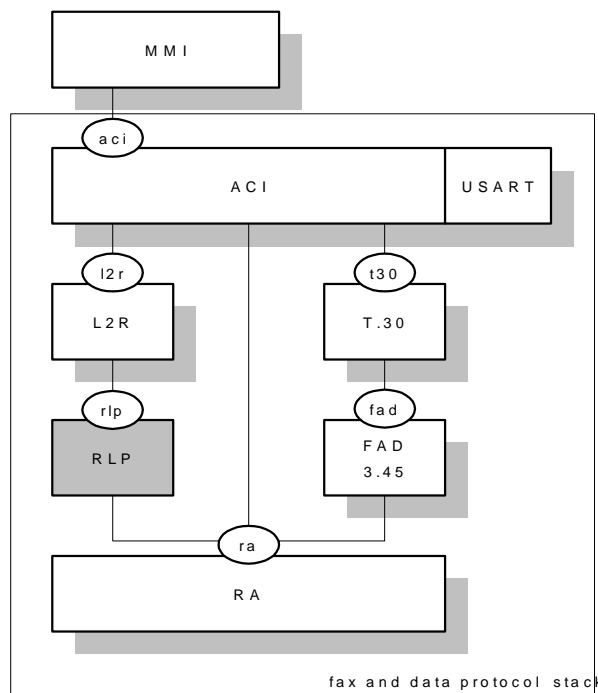

Figure 1-1: Architecture of the fax and data protocol stack

The information units passed via the SAPs are called primitives and consists of an operation code and several parameters. See the Users Guide for details.

The entities of the fax and data protocol stack are:

1.1 RA - Rate Adaptation

This entity performs an adaptation between an asynchronous or synchronous data stream with several bit rates on to the fixed bit rate used at the TCH. This is performed by the rate adaptation functions RA1' and RA0 described in GSM 04.21.

1.2 RLP - Radio Link Protocol

This entity provides a Layer 2 protocol for asynchronous reliable data transfer as specified in GSM 04.22. It includes error correction, sequence numbers and a mechanism for repeating corrupted and lost messages.

1.3 L2R - Layer 2 Relay Functionality

The L2R provides relay functions in order to adapt the character-oriented data received from the TE via USART to the bit-oriented RLP protocol.

1.4 FAD 03.45 - Fax Adaptation Protocol

The fax adaptation protocol, as specified in GSM 03.45, provides synchronisation with the BCS and MSG modems of the peer entity. It uses byte repetition in conjunction with a voting algorithm to handle corruption on the TCH data stream. The non-transparent fax protocol in accordance with GSM 03.46 is not part of this implementation.

The fax adapter enables T.30 to send BCS at 300 BPS and T.4 MSG in 2400, 4800, 7200 and 9600 BPS.

1.5 T.30 - Fax Protocol Entity

The protocol uses binary coded signals packed in HDLC frames to set up and release a connection in the message phase of the FAX transmission. This entity is specified in the ITU-T.30. The main tasks of this unit are:

- Building the HDLC frames with CRC.
- Performing bit stuffing/de-stuffing.
- Executing a sequence of 5 phases: 1.) set up, 2.) pre-message procedures, 3.) transmission/reception, 4.) post message procedures, 5.) waiting for call release.

1.6 ACI - AT Command Interpreter

The ACI is specified in GSM 07.07. It is responsible for call establishment via the GSM voice protocol stack and terminal adaptation for asynchronous transparent character-oriented data transmission. The ACI is able to receive AT commands and send the replies over the USART driver to a remote PC. This makes it possible to control the voice and data protocol stack from a remote application running on a PC. The ACI also provides a unique interface for an internal MMI in the MS.

1.7 USART - Universal Synchronous Asynchronous Receiver Transmitter Driver

The USART is a hardware component that facilitates a connection between the mobile station and terminal equipment (e.g. a PC). This interface uses some of the circuits described in V.24.

The data exchange provided by this unit is serial and asynchronous (synchronous communication is not in the scope of this document). A driver that uses interrupts to manage a circular buffer for the sending and receiving direction is necessary in order to use this component in the F&D. The driver has to be able to perform flow control.

3.2.2 ACISAT012: Power On with various Terminal Profiles

Description:

Configure various Terminal Profile and request SAT indications, then activate the SIM card. SIM indicates SAT features. The resulting Terminal Profile is a result of a filtering mechanism in ACI, deleting all flags for which no ACI support is existent, and setting flags which are supported by ACI alone.
 This test is subject to further enhancements of the ACI.

Variants:

<A>....<L>

3.2.3 ACISAT013: Power On with various received SIM Service Tables

Description:

Configure a standard Terminal Profile and request SAT indications, then activate the SIM card. SIM indicates SAT features and other services in its Service Table.
This test is a preliminary for other tests.

Variants:

<A>....<E>

Preamble:

3.7 SAT abnormal cases (ACISAT200-ACISAT249)

3.7.1 ACISAT200: SAT command with unknown tag, comprehension not required.

Description:

SAT invokes a SS send command. Call control by SIM is not allocated and activated. An unknown tag was detected by CCD, but comprehension is not required. The SS transaction is started and completed successfully. SAT is informed about the successful termination of the operation with partial comprehension. To check that no interference with the Comprehension Required specification of GSM 04.07 exists, various unknown tag values are checked.

3.9.7 ACISAT322: SAT File Change Notification: Update Required for SMS/CBCH Parameters

Description:

After Initialisation a MNSMS_REPORT_IND starts the SMS service and the SMS/CBCH parameters are read from SIM. Then ACI receives the primitive SIM_FILE_UPDATE_IND which includes various file identifiers of changed EFs. Any EF(SMSP), EF(CBML) or EF(CBMIR) in the list triggers rereading of these EFs by the ACI, then the result primitive SIM_FILE_UPDATE_RESPONSE is returned.

Description:

After the UDP stack is configured, the SIM entity will be connected

<A> CSD channel, full parameter set, UDP, immediate

 CSD channel, full parameter set, UDP, immediate, modified by call control SIM

<C> CSD channel, full parameter set, transparent, immediate

<D> CSD channel, full parameter set, non-transparent, immediate

<E> CSD channel, default parameters, immediate

<F> CSD channel, full parameter set, UDP, on demand

<G> CSD channel, full parameter set, UDP, on demand, modified by call control SIM

<H> CSD channel, full parameter set, transparent, on demand

<I> CSD channel, full parameter set, non-transparent, on demand

<J> CSD channel, default parameters, on demand

<K> GPRS channel, full parameter set, UDP, immediate

<L> GPRS channel, full parameter set, UDP, on demand

<M> GPRS channel, full parameter set, SNDTCP, immediate

<N> GPRS channel, default parameters, immediate

<O> GPRS channel, full parameter set, SNDTCP, on demand

<P> GPRS channel, default parameters, on demand

<Q> CSD channel, full parameter set, UDP, immediate, SIM connection failed

<R> CSD channel, full parameter set, default parameters, immediate, SIM connection failed

<S> CSD channel, full parameter set, UDP, on demand, SIM connection failed

<T> CSD channel, full parameter set, non-transparent, on demand, SIM connection failed

<U> GPRS channel, full parameter set, UDP, immediate, SIM connection failed

<V> GPRS channel, full parameter set, SNDTCP, immediate, SIM connection failed

<W> GPRS channel, full parameter set, UDP, on demand, SIM connection failed

<X> GPRS channel, full parameter set, SNDTCP, on demand, SIM connection failed

3.22.15 ACISAT448: OPEN CHANNEL establishment, CSD/GPRS, suc/unsuc (command termination)

Description:

After the SIM entity is connected, a response will be send to SAT and the command will be terminated for immediate OPEN CHANNEL command. Variant I is an unsuccessful command termination.

- <A> CSD channel, full parameter set, UDP, immediate
- CSD channel, full parameter set, UDP, immediate, modified by call control SIM
- <C> CSD channel, full parameter set, transparent, immediate
- <D> CSD channel, full parameter set, non-transparent, immediate
- <E> CSD channel, default parameters, immediate
- <F> GPRS channel, full parameter set, UDP, immediate
- <G> GPRS channel, full parameter set, SNDP, immediate
- <H> GPRS channel, default parameters, immediate
- <I> GPRS channel, full parameter set, UDP, immediate, CS connection active

3.23.14 ACISAT483: CLOSE CHANNEL disconnect, CSD, , SIM disconnect after SIM failure (TRA part) FAIL

Description: After a connection failure has been reported by SIM, the SIM channel will be closed

CSD channel, full parameter set, transparent, immediate, SIM disconnect after SIM failure

Preamble:

[ACISAT480B](#)

APL	ACI	PS
(1)	TRA_DTI_REQ	
(2)	SIM_DTI_REQ (BIP)	
(3)	TRA_DTI_CNF	
(4)	SIM_DTI_CNF (BIP)	
(5)	TRA_DEACTIVATE_REQ	
(6)	TRA_DEACTIVATE_CNF	

Parametrization:

Primitive	Parameter	Value
(1) TRA_DTI_REQ	dti_conn	TRA_DISCONNECT_DTI
	link_id	SIM_TRA_LINK_ID
	entity_name	NOT_USED
	dti_direction	TRA_DTI_NORMAL

(2) SIM_DTI_REQ

link_id	SIM_DTI_REQ_NOT_VALID
dti_conn	SIM_BIP_CLOSE_CHANNEL
bip_ch_id	CHANNEL_SRC_ID1
con_type	SIM_DTI_REQ_NOT_VALID
dti_direction	SIM_DTI_NORMAL
entity_name	NOT_USED
local_ip	SIM_DTI_REQ_NOT_VALID
destination_ip	SIM_DTI_REQ_NOT_VALID
destination_port	SIM_DTI_REQ_NOT_VALID
general_result	RSLT_BEARIND_PERR
add_info_result	ADD_BIP_NO_CHAN_AVAIL
release_time	SIM_DTI_REQ_NOT_VALID

(3) TRA_DTI_CNF

dti_conn	TRA_DISCONNECT_DTI
link_id	SIM_TRA_LINK_ID

(4) SIM_DTI_CNF

link_id	SIM_DTI_REQ_NOT_VALID
dti_conn	SIM_BIP_CLOSE_CHANNEL
bip_ch_id	CHANNEL_SRC_ID1

(5) TRA_DEACTIVATE_REQ

(6) TRA_DEACTIVATE_CNF
