**File:** MMG.DOC

## Table of Contents

<b>0</b>	<b>DOCUMENT CONTROL</b> .....	<b>16</b>
<b>0.1</b>	<b>Document History</b> .....	<b>16</b>
<b>0.2</b>	<b>References</b> .....	<b>17</b>
<b>0.3</b>	<b>Abbreviations</b> .....	<b>21</b>
<b>0.4</b>	<b>Terms</b> .....	<b>23</b>
<b>1</b>	<b>OVERVIEW</b> .....	<b>23</b>
<b>1.1</b>	<b>GRR (RLC/MAC) – Radio Link Control/Medium Access Control</b> .....	<b>24</b>
<b>1.2</b>	<b>LLC – Logical Link Control</b> .....	<b>24</b>
<b>1.3</b>	<b>GMM – GPRS Mobility Management</b> .....	<b>24</b>
<b>1.4</b>	<b>SM – Session Management</b> .....	<b>24</b>
<b>1.5</b>	<b>SNDCP - Subnetwork Dependant Convergence Protocol</b> .....	<b>25</b>
<b>1.6</b>	<b>GACI – GPRS Application Control Interface</b> .....	<b>25</b>
<b>1.7</b>	<b>USART - Universal Synchronous Asynchronous Receiver Transmitter Driver</b> .....	<b>25</b>
<b>1.8</b>	<b>TOM – Tunnelling of Messages</b> .....	<b>25</b>
<b>2</b>	<b>PARAMETERS</b> .....	<b>26</b>
<b>3</b>	<b>TEST CASES</b> .....	<b>67</b>
<b>3.1</b>	<b>Internal Routing</b> .....	<b>67</b>
<b>3.1.1</b>	<b>MMG0001: Configure internal routing and PCO view</b> .....	<b>67</b>
<b>3.2</b>	<b>Registration</b> .....	<b>69</b>
<b>3.2.1</b>	<b>MMG0021: Registration without SIM card</b> .....	<b>69</b>
<b>3.2.2</b>	<b>MMG0022: Mobile station is synchronous to a Cell</b> .....	<b>70</b>
<b>3.2.3</b>	<b>MMG0023: SIM inserted - initiate cell selection</b> .....	<b>71</b>
<b>3.2.4</b>	<b>MMG0024: Successful conclusion of cell selection - cell with same LAI</b> .....	<b>73</b>
<b>3.2.5</b>	<b>MMG0025: SIM inserted - Search for specific network (no LUP)</b> .....	<b>74</b>
<b>3.2.6</b>	<b>MMG0026: SIM inserted - Search for specific network (with LUP)</b> .....	<b>76</b>
<b>3.2.7</b>	<b>MMG0027: Mobile station is synchronous to a Cell (reestablish allowed in cell)</b> 80	
<b>3.2.8</b>	<b>MMG0028: Updated, IMSI Attach, TMSI reallocation</b> .....	<b>81</b>
<b>3.2.9</b>	<b>MMG0029: Updated, LAC change, periodic, LAC change back</b> .....	<b>85</b>
<b>3.2.10</b>	<b>MMG0030: SIM inserted - normal update after cell selection, TMSI REALLOC</b> ...	<b>87</b>
<b>3.2.11</b>	<b>MMG0031: SIM inserted - normal update after cell selection, LUP ACCEPT</b> .....	<b>90</b>
<b>3.2.12</b>	<b>MMG0032: LUP REJECT after TMSI REALLOC CMD in NOT UPDATED</b> .....	<b>92</b>
<b>3.2.13</b>	<b>MMG0033: SIM inserted - normal update, TMSI REALLOC, Radio link failure</b> ....	<b>94</b>
<b>3.2.14</b>	<b>MMG0034: TMSI REALLOC in state MM LUP REJECTED</b> .....	<b>96</b>
<b>3.3</b>	<b>Connection Establishment</b> .....	<b>101</b>
<b>3.3.1</b>	<b>MMG0041: Establish request prior to existing RR Connection</b> .....	<b>101</b>

3.3.2	MMG0042: Mobile terminated MM Connection .....	102
3.3.3	MMG0043: Acknowledgement of MM Connection .....	103
3.3.4	MMG0044: Identity Request in State 5 .....	104
3.3.5	MMG0045: RR-MM Synchronization .....	105
3.3.6	MMG0046: MTC interleaved by MOC in state MM_WAIT_FOR_NW_CMD.....	106
3.3.7	MMG0047: Data Transfer from Mobile Station in State 6 .....	108
3.3.8	MMG0048: Data Transfer in both directions in State 6 .....	109
3.3.9	MMG0049: Random Access Failed, internal auto redial .....	110
3.3.10	MMG0050: Initiation of CCBS call back.....	112
3.3.11	MMG0051: Initiation of CCBS call back, out of ti.....	114
3.3.12	MMG0052: CM_SERV_REJ (Illegal ME).....	116
3.3.13	MMG0053: CM_SERV_REJ (IMSI unknown in VLR).....	118
3.3.14	MMG0055: RR_ESTABLISH_IND in state MM_WAIT_FOR_RR_CONN_MM .....	120
3.3.15	MMG0056: RR_RELEASE_IND in state MM_WAIT_FOR_RR_CONN_MM .....	121
3.3.16	MMG0057: ABORT (Illegal ME).....	122
3.3.17	MMG0058: ABORT (Network Failure) .....	124
3.4	Emergency Call.....	126
3.4.1	MMG0060: Emergency Call after AT+CFUN=2.....	126
3.4.2	MMG0061: Emergency Call in Idle State 19.2 .....	129
3.4.3	MMG0062: RR Release followed by Call Establishment Request .....	131
3.4.4	MMG0063: Emergency Call in Idle State 19.4 .....	132
3.4.5	MMG0064: Reestablishment during EC (Emergency Call) .....	134
3.4.6	MMG0065: Emergency Call in State 19.3 .....	136
3.4.7	MMG0066: Calls after power cycle with SIM Remove (CS_POW_OFF) .....	138
3.4.8	MMG0067: Calls after power cycle without SIM Remove (CS_SOFT_OFF).....	141
3.5	Connection Release .....	144
3.5.1	MMG0081: Release of Connection via MS .....	144
3.5.2	MMG0082: MMCC_REL_REQ in State 14.....	145
3.5.3	MMG0083: Release of Connection via BS.....	146
3.5.4	MMG0084: Clash case in MM_WAIT_FOR_ADD_MM_CONN (I), success.....	147
3.5.5	MMG0085: Clash case in MM_WAIT_FOR_ADD_MM_CONN (I), failure .....	149
3.5.6	MMG0086: Clash case in MM_WAIT_FOR_ADD_MM_CONN (II), success.....	151
3.5.7	MMG0087: Clash case in MM_WAIT_FOR_ADD_MM_CONN (II), failure.....	154
3.5.8	MMG0088: Expiry of T3230 for 2nd requested MM connection .....	157
3.5.9	MMG0089: Clash of MO/MT SMS, RR_ESTABLISH_IND .....	160
3.5.10	MMG0090: Clash of MO/MT SMS, RR_RELEASE_IND, MT okay .....	162

3.5.11	MMG0091: Clash of MO/MT SMS, RR_RELEASE_IND, MT not okay .....	164
3.5.12	MMG0092: Clash case in MM_CONN_ACTIVE, CM_SERV_REJ, success.....	166
3.5.13	MMG0093: MM_CONN_ACTIVE, CM_SERV_REJ, no clash, no repeat .....	169
3.6	Location Updating.....	171
3.6.1	MMG0101: MS in new Location Area .....	171
3.6.2	MMG0102: New LAI with Periodic Updating .....	172
3.6.3	MMG0103: Access classes barred in State 13.....	173
3.6.4	MMG0104: Random access delayed in State 13.....	174
3.6.5	MMG0105: Successful Location Updating .....	175
3.6.6	MMG0106: Location Accept without Mobile Identity .....	178
3.6.7	MMG0107: Connection request stored until Location Updating complete .....	180
3.6.8	MMG0108: Location Updating Reject (PLMN not allowed).....	183
3.6.9	MMG0109: Change of Area in Update Status U3 .....	185
3.6.10	MMG0110: Location Updating Reject (LAI roaming not allowed).....	188
3.6.11	MMG0111: New Location Area Code in Update Status U3 .....	190
3.6.12	MMG0112: Normal Location Updating rejected four times.....	193
3.6.13	MMG0113: Re-attempt after time-out Location updating timer .....	199
3.6.14	MMG0114: Re-attempt after fieldstrength jump.....	202
3.6.15	MMG0115: MS in new Location Area (TEST SIM inserted).....	206
3.6.16	MMG0116: Location Updating Reject (PLMN not allowed), not HPLMN .....	207
3.6.17	MMG0117: Location Updating Reject (PLMN not allowed), mode AUTO .....	210
3.6.18	MMG0118: Location Updating Reject (IMSI unknown in HLR), mode AUTO.....	217
3.6.19	MMG0120: Receive LUP rejects with cause #11, 6 forbidden PLMNs total now	222
3.6.20	MMG0121: Non-forbidden PLMN offered in limited service .....	226
3.6.21	MMG0122: Manual selection forb. PLMN, success .....	230
3.6.22	MMG0123: Loss of service, non forb. PLMN offered in automatic mode, success	235
3.6.23	MMG0124: Location Accept with empty Mobile Identity .....	240
3.6.24	MMG0125: Location Updating triggered by Normal Call in Idle State 19.2 .....	242
3.6.25	MMG0126: Location Updating triggered by Normal Call in Idle State 19.2 .....	244
3.6.26	MMG0127: Normal update after switch on after arrival at airport, 4 * #17 .....	247
3.6.27	MMG0128: Updating continues on different PLMN after 4 * network failure.....	255
3.7	Identity Request .....	258
3.7.1	MMG0135: Identity Request during Location Updating .....	258
3.7.2	MMG0136: Identity Request during MTC .....	260
3.8	Authentication.....	261
3.8.1	MMG0141: Authentication Request .....	261

3.8.2	MMG0142: Authentication Response.....	262
3.8.3	MMG0143: Authentication Request in State 6.....	263
3.8.4	MMG0144: Authentication Reject in State 3.....	266
3.8.5	MMG0145: Authentication Reject and SIM Removal in State 3.....	268
3.8.6	MMG0146: Authentication Request in State 5.....	270
3.8.7	MMG0147: Response to Authentication Request in State 5.....	272
3.8.8	MMG0148: Authentication Reject in State 5.....	273
3.8.9	MMG0149: Authentication Reject during request for a second connection.....	275
3.8.10	MMG0150: Authentication in State 9.....	279
3.8.11	MMG0151: Response to Authentication Request in State 9.....	280
3.8.12	MMG0152: Authentication Reject in State 9.....	281
3.8.13	MMG0153: Registration request following authorization failure.....	283
3.8.14	MMG0154: LUP Rej following AUTHENTICATION RESPONSE in State 3.....	285
3.8.15	MMG0155: LUP with MM INFORMATION - I.....	287
3.8.16	MMG0156: LUP with MM INFORMATION - II.....	289
3.9	Net Request.....	291
3.9.1	MMG0161: Net Request in State 19.4.....	291
3.9.2	MMG0162: RR_ABORT_IND in State 19.....	292
3.10	TMSI Reallocation.....	293
3.10.1	MMG0181: TMSI Reallocation in State 5.....	293
3.11	Deregistration.....	295
3.11.1	MMG0201: MMGMM_NREG_REQ in State 3.....	295
3.11.2	MMG0202: MMGMM_NREG_REQ in Udate Status U1.....	297
3.11.3	MMG0203: Authentication Reject and Power off in State 6.....	298
3.11.4	MMG0204: Power Off in State 10.....	299
3.11.5	MMG0205: Power Off in State 14.....	301
3.11.6	MMG0206: Power Off in State 18.....	302
3.11.7	MMG0207: Power Off Remove in State 19.....	303
3.11.8	MMG0208: Switch on after soft power off, IMSI ATTACH needed.....	304
3.12	Registration (REG_MS_OFF, no SIM Card).....	306
3.12.1	MMG0300: Registration.....	306
3.12.2	MMG0301: Deregistration.....	307
3.12.3	MMG0302: SIM Insertion.....	308
3.12.4	MMG0352: PLMN Available Request.....	309
3.13	Registration (REG_NO_SERVICE, no SIM Card).....	310
3.13.1	MMG0303: Registration.....	310

3.13.2	MMG0304: Deregistration.....	311
3.13.3	MMG0305: SIM Insertion .....	312
3.13.4	MMG0306: RR failure (No Service).....	313
3.13.5	MMG0307: MM Success ( Limited Service).....	314
3.13.6	MMG0353: PLMN Available Request.....	315
3.14	Registration (REG_LIMITED_SERVICE, no SIM Card) .....	316
3.14.1	MMG0308: Registration.....	316
3.14.2	MMG0309: Deregistration.....	317
3.14.3	MMG0310: SIM Insertion .....	318
3.14.4	MMG0311: RR failure (No Service).....	319
3.14.5	MMG0312: MM Success ( Limited Service).....	320
3.14.6	MMG0354: PLMN Available Request.....	321
3.15	Registration (REG_MS_OFF, with SIM card) .....	322
3.15.1	MMG0313: Registration.....	322
3.15.2	MMG0314: PLMN Mode Change.....	324
3.15.3	MMG0315: Deregistration (Power Off).....	326
3.15.4	MMG0316: Deregistration (SIM invalid).....	327
3.15.5	MMG0317: SIM Removal.....	328
3.15.6	MMG0351: PLMN Available Request.....	329
3.16	Registration (REG_NO_SERVICE, with SIM card, automatic mode) .....	330
3.16.1	MMG0318: Registration.....	330
3.16.2	MMG0319: PLMN Mode Change.....	332
3.16.3	MMG0320: Deregistration (Power Off).....	334
3.16.4	MMG0321: Deregistration (SIM invalid).....	335
3.16.5	MMG0322: SIM Removal.....	336
3.16.6	MMG0323: RR failure (No Service).....	337
3.16.7	MMG0324: RR failure (Limited Service, no further PLMNs).....	338
3.16.8	MMG0325: RR failure (Limited Service, further PLMNs available) .....	339
3.16.9	MMG0326: MM Success.....	340
3.16.10	MMG0327: MM Failure .....	341
3.16.11	MMG0328: MM Authentication Failure .....	348
3.16.12	MMG0355: PLMN Available Request.....	352
3.16.13	MMG0358: PLMN Selection successful.....	355
3.16.14	MMG0359: PLMN Selection unsuccessful.....	357
3.16.15	MMG0364: PLMN Available List to MMI.....	359
3.16.16	MMG0365: PLMN Selection successful (manual Mode).....	361

3.16.17	MMG0366: PLMN Selection unsuccessful (Manual Mode) .....	363
3.17	Registration (REG_LIMITED_SERVICE, with SIM card, automatic mode) .....	365
3.17.1	MMG0329: Registration .....	365
3.17.2	MMG0330: PLMN Mode Change .....	367
3.17.3	MMG0331: Deregistration (Power Off) .....	369
3.17.4	MMG0332: Deregistration (SIM invalid) .....	370
3.17.5	MMG0333: SIM Removal .....	371
3.17.6	MMG0334: RR failure (No Service) .....	373
3.17.7	MMG0335: RR failure (Limited Service, no further PLMNs) .....	374
3.17.8	MMG0336: RR failure (Limited Service, further PLMNs available) .....	375
3.17.9	MMG0337: MM Success .....	377
3.17.10	MMG0338: MM Failure .....	378
3.17.11	MMG0339: MM Authentication Failure .....	385
3.17.12	MMG0356: PLMN Available Request .....	389
3.17.13	MMG0360: PLMN Selection successful .....	393
3.17.14	MMG0361: PLMN Selection unsuccessful .....	395
3.18	Registration (REG_FULL_SERVICE, with SIM card, automatic mode) .....	397
3.18.1	MMG0340: Registration .....	397
3.18.2	MMG0341: PLMN Mode Change .....	399
3.18.3	MMG0342: Deregistration (Power Off) .....	401
3.18.4	MMG0343: Deregistration (SIM invalid) .....	402
3.18.5	MMG0344: SIM Removal .....	404
3.18.6	MMG0345: RR failure (No Service) .....	406
3.18.7	MMG0346: RR failure (Limited Service, no further PLMNs) .....	407
3.18.8	MMG0347: RR failure (Limited Service, further PLMNs available) .....	408
3.18.9	MMG0348: MM Success .....	410
3.18.10	MMG0349: MM Failure .....	413
3.18.11	MMG0350: MM Authentication Failure .....	419
3.18.12	MMG0357: PLMN Available Request .....	423
3.18.13	MMG0362: PLMN Selection successful .....	425
3.18.14	MMG0363: PLMN Selection unsuccessful .....	426
3.19	MM Idle Mode Behaviour (Normal Service) .....	428
3.19.1	MMG0400: Normal Service, new cell, same location area .....	428
3.19.2	MMG0401: Normal Service, new cell, new location area .....	429
3.19.3	MMG0402: Normal Service, new cell, new PLMN identification .....	430
3.19.4	MMG0403: Updated, IMSI Attach .....	431

3.19.5	MMG0404: Normal Service, Timeout T3211, LUP Reject Cause #17.....	433
3.19.6	MMG0405: Normal Service, Timeout T3211, LUP Reject Cause, 2.-4. attempt...	435
3.19.7	MMG0406: Updated, Periodic LUP.....	439
3.19.8	MMG0407: Normal Service, Timeout T3211, LUP Reject Cause #17.....	441
3.19.9	MMG0408: Normal Service, Timeout T3211, LUP Reject Cause, 2.-4. attempt...	443
3.19.10	MMG0409: Normal Service, Timeout T3211, RR Release before end of proc	447
3.19.11	MMG0410: Normal Service, T3211, RR Release before end of proc, 2.-4. attempt	449
3.19.12	MMG0411: Normal Service, T3211, RR Release before end of proc.....	452
3.19.13	MMG0412: Normal Service, T3211, RR Release before end of proc, 2.-4. attempt	454
3.19.14	MMG0413: Normal Service, T3211, Timeout T3210 .....	457
3.19.15	MMG0414: Normal Service, T3211, Timeout T3210, 2.-4. attempt.....	459
3.19.16	MMG0415: Normal Service, T3211, Timeout T3210 .....	462
3.19.17	MMG0416: Normal Service, T3211, Timeout T3210, 2.-4. attempt.....	464
3.19.18	MMG0417: Normal Service, T3211, RR connection failure .....	467
3.19.19	MMG0418: Normal Service, T3211, RR Connection Failure, 2.-4. attempt.....	469
3.19.20	MMG0419: Normal Service, T3211, RR Connection Failure .....	472
3.19.21	MMG0420: Normal Service, T3211, RR Connection Failure, 2.-4. attempt.....	474
3.19.22	MMG0421: Normal Service, T3211, Random Access Failure .....	477
3.19.23	MMG0422: Normal Service, T3211, Random Access Failure, 2.-4. attempt....	479
3.19.24	MMG0423: Normal Service, T3211, Random Access Failure .....	483
3.19.25	MMG0424: Normal Service, T3211, Random Access Failure, 2.-4. attempt....	485
3.19.26	MMG0425: Random access delayed .....	489
3.19.27	MMG0426: Random access barred.....	491
3.19.28	MMG0427: Not Updated in Current LA, Start Normal Location Updating .....	493
3.19.29	MMG0600: Normal Service, T3211, Anite Behaviour .....	495
3.20	MM Idle Mode Behaviour (Attempt to Update).....	500
3.20.1	MMG0428: Attempt to Update, Timeout T3211, LUP Reject Cause #17.....	500
3.20.2	MMG0429: Attempt to update, Timeout T3211, LUP Reject Cause, 2.-4. attempt	502
3.20.3	MMG0430: Not Updated, Periodic LUP.....	507
3.20.4	MMG0431: Periodic not updated, Timeout T3211, LUP Reject Cause #17 .....	508
3.20.5	MMG0432: Attempt to Update, Normal, T3211, RR Release before end of proc	514
3.20.6	MMG0433: Periodic, Attempt to Update, T3211, RR Release before end of proc	518
3.20.7	MMG0434: Attempt to Update, Normal, T3211, Timeout T3210.....	523
3.20.8	MMG0435: Periodic, Attempt to Update, T3211, Timeout T3210 .....	527
3.20.9	MMG0436: Attempt to Update, Normal, T3211, RR connection failure.....	533

3.20.10	MMG0437: Periodic, Attempt to Update, T3211, RR Connection Failure .....	537
3.20.11	MMG0438: Attempt to Update, Normal, T3211, RR connection failure .....	542
3.20.12	MMG0439: Periodic, Attempt to Update, T3211, Random Access Failure .....	547
3.20.13	MMG0440: Random access delayed .....	554
3.20.14	MMG0441: Random access barred.....	556
3.20.15	MMG0442: Normal Service, IMSI Detach, Power OFF, Est Cnf.....	558
3.20.16	MMG0443: Normal Service, IMSI Detach, Power OFF, Rel Ind .....	560
3.20.17	MMG0444: Normal Service, IMSI Detach, Power OFF, Radio Link Failure ...	562
3.20.18	MMG0446: Normal Service, IMSI Detach, SIM Remove by SIM, Est Cnf .....	564
3.20.19	MMG0447: Normal Service, IMSI Detach, SIM Remove by SIM, Rel Ind .....	566
3.20.20	MMG0448: Normal Service, IMSI Detach, SIM Remove, Radio Link Failure .	568
3.20.21	MMG0450: Normal Service, IMSI Detach, SIM Remove by MMI, Est Cnf .....	570
3.20.22	MMG0451: Normal Service, IMSI Detach, SIM Remove by MMI, Rel Ind .....	572
3.20.23	MMG0452: Normal Service, IMSI Detach, SIM Remove by MMI, Radio Link Fail	574
3.20.24	MMG0454: IMSI Attach and CM Connection Establishment.....	576
3.20.25	MMG0455: Connection Active, IMSI Detach, Power OFF, Timeout T3220 .....	579
3.20.26	MMG0456: Connection Active, IMSI Detach, Power OFF, Rel Ind .....	581
3.20.27	MMG0457: Connection Active, IMSI Detach, Power OFF, Radio Link Failure	583
3.20.28	MMG0458: Active, IMSI Detach, SIM Remove by SIM, Rel Ind .....	585
3.20.29	MMG0459: Active, IMSI Detach, SIM Remove by SIM, Radio Link Fail .....	587
3.20.30	MMG0460: Active, IMSI Detach, SIM Remove by SIM, T3220 Timeout .....	589
3.20.31	MMG0461: Active, IMSI Detach, SIM Remove by MMI, Rel Ind.....	591
3.20.32	MMG0462: Active, IMSI Detach, SIM Remove by MMI, Radio Link Fail .....	593
3.20.33	MMG0463: Active, IMSI Detach, SIM Remove by MMI, T3220 Timeout.....	595
3.20.34	MMG0464: Attempt to update, change of location area identification .....	597
3.20.35	MMG0465: Attempt to update, change of cell, random access failure .....	598
3.20.36	MMG0466: Attempt to update, change of cell, RR connection failure .....	599
3.20.37	MMG0467: Attempt to update, change of cell, Release before end of proc ..	600
3.20.38	MMG0468: Attempt to update, change of cell, Release before end of proc ..	601
3.20.39	MMG0469: Attempt to update, change of cell, Location Updating Request ..	605
3.20.40	MMG0470: Attempt to update, change of cell, Location updating reject .....	606
3.20.41	MMG0471: Attempt to Update, IMSI Detach, Power OFF.....	611
3.20.42	MMG0472: Attempt to Update, IMSI Detach, SIM Remove by SIM.....	612
3.20.43	MMG0473: Attempt to Update, IMSI Detach, SIM Remove by MMI .....	613
3.20.44	MMG0474: Attempt to update, Emergency Call.....	614
3.20.45	MMG0475: Attempt to update, CM connection request (I) .....	616

3.20.46	MMG0476: Attempt to update, CM connection request (II) .....	619
3.20.47	MMG0477: Attempt to update, CM connection request (III) .....	624
3.20.48	MMG0478: Attempt to update, CM connection request (IV) .....	627
3.21	MM Idle Mode Behaviour (Limited Service) .....	630
3.21.1	MMG0479: Limited Service State .....	630
3.21.2	MMG0480: Limited, not perform Periodic LUP .....	632
3.21.3	MMG0481: Limited, IMSI Detach, Power OFF .....	633
3.21.4	MMG0482: Limited, IMSI Detach, SIM Remove by SIM .....	634
3.21.5	MMG0483: Limited, IMSI Detach, SIM Remove by MMI .....	635
3.21.6	MMG0484: Limited, Call attempts, Emergency Calls .....	636
3.21.7	MMG0485: Limited, new cell, new LA, but only limited service .....	641
3.21.8	MMG0487: Limited, new location area, full service .....	642
3.21.9	MMG0488: Limited Service, LUP Reject Cause #17 .....	643
3.21.10	MMG0489: Limited Service, Location updating accept .....	645
3.21.11	MMG0490: Limited Service, Mobile terminated Connection .....	648
3.22	MM Idle Mode Behaviour (No IMSI Service) .....	649
3.22.1	MMG0491: No IMSI State .....	649
3.22.2	MMG0492: No Imsi, not perform Periodic LUP .....	651
3.22.3	MMG0493: No IMSI, IMSI Detach, Power OFF .....	652
3.22.4	MMG0494: No IMSI, Call attempts, Emergency Calls .....	653
3.22.5	MMG0495: No IMSI, new cell, new LA, but only limited service .....	658
3.23	MM Idle Mode Behaviour (No Cell available) .....	659
3.23.1	MMG0497: No Cell available indication from Normal Service .....	659
3.23.2	MMG0498: No Cell available, same cell .....	660
3.23.3	MMG0499: No Cell available, same location area .....	661
3.23.4	MMG0500: No IMSI, IMSI Detach, Power OFF .....	662
3.23.5	MMG0501: No Cell available, IMSI Detach, SIM Remove by SIM .....	663
3.23.6	MMG0502: No Cell available, IMSI Detach, SIM Remove by MMI .....	664
3.23.7	MMG0503: No cell available, Call attempts by upper layer .....	665
3.23.8	MMG0504: No cell available, new cell, new LA, but only limited service .....	667
3.23.9	MMG0506: No Cell available, new cell, new location area, full service .....	668
3.24	Additional registration testcases .....	669
3.24.1	MMG0520: MM needs IMSI ATTACH after switch on. Cell temporary barred .....	669
3.24.2	MMG0521: MM needs IMSI ATTACH after switch on. Cell temporary barred .....	672
3.24.3	MMG0522: MM doesn't find LPLMN, needs NORMAL UPDATE, cell barred .....	676
3.24.4	MMG0523: MM doesn't find LPLMN, needs NORMAL UPDATE, cell barred .....	679

3.24.5	MMG0524: MM needs IMSI ATTACH after switch on. Cell temporary barred.....	683
3.24.6	MMG0525: MM needs IMSI ATTACH after switch on in tunnel.....	687
3.24.7	MMG0526: MM IDLE updated, T3212 running, manual network search I.....	690
3.24.8	MMG0527: MM IDLE updated, T3212 running, manual network search II.....	694
3.25	Network search .....	698
3.25.1	MMG0530: Aborted manual NW srch in MM_IDLE_ATTEMPT_TO_UPDATE.....	698
3.25.2	MMG0531: MM_IDLE_ATTEMPT_TO_UPDATE, MO call .....	700
3.25.3	MMG0532: MM_PLMN_SEARCH_NORMAL_SERVICE, MO call .....	703
3.25.4	MMG0533: Manual NW search in MM_IDLE_ATTEMPT_TO_UPDATE.....	706
3.26	Behaviour due to SAT activity.....	709
3.26.1	MMG0601: SIM insert indication by SAT .- IMSI change, detach/attach.....	709
3.26.2	MMG0602: SIM insert indication by SAT - IMSI change, detach/attach, manual	715
3.26.3	MMG0603: SIM insert indication by SAT - IMSI change, automatic mode.....	723
3.26.4	MMG0604: SIM insert indication by SAT - IMSI change, manual mode .....	727
3.26.5	MMG0605: SIM insert indication by SAT - no IMSI change, RR notification .....	731
3.26.6	MMG0606: SIM inserted - File update by SAT.....	732
3.26.7	MMG0607: SIM inserted - File update by SAT.....	733
3.26.8	MMG0608: File update by SAT, RR notification .....	734
3.27	Switching service modes back and forth.....	736
3.27.1	MMG0620: SIM inserted - Deregistered -> Deregistered.....	736
3.27.2	MMG0621: SIM inserted - Deregistered -> Limited.....	736
3.27.3	MMG0622: SIM inserted - Deregistered -> Full (automatic mode).....	737
3.27.4	MMG0623: SIM inserted - Deregistered -> Full (manual mode).....	739
3.27.5	MMG0624: SIM inserted - Limited -> Deregistered.....	740
3.27.6	MMG0625: SIM inserted - Limited -> Limited .....	741
3.27.7	MMG0626: SIM inserted - Limited -> Full (automatic mode) .....	742
3.27.8	MMG0627: SIM inserted - Limited -> Full (manual mode).....	743
3.27.9	MMG0628: SIM inserted - Full (automatic mode) -> Deregistered .....	745
3.27.10	MMG0629: SIM inserted - Full (automatic mode) -> Limited .....	745
3.27.11	MMG0630: SIM inserted - Full (automatic mode) -> Full (automatic mode)...	747
3.27.12	MMG0631: SIM inserted - Full (automatic mode) -> Full (manual mode) .....	748
3.27.13	MMG0632: SIM inserted - Full (manual mode) -> Deregistered.....	750
3.27.14	MMG0633: SIM inserted - Full (manual mode) -> Limited .....	750
3.27.15	MMG0634: SIM inserted - Full (manual mode) -> Full (automatic mode) .....	752
3.27.16	MMG0635: SIM inserted - Full (manual mode) -> Full (manual mode).....	753
3.28	Network search by MMI test cases.....	756

3.28.1	MMG0650: Network search during location updating procedure .....	756
3.28.2	MMG0651: Network search interrupts MM_WAIT_FOR_RR_ACTIVE .....	763
3.28.3	MMG0652: Search for a more preferred PLMN - preamble test .....	766
3.28.4	MMG0653: Registered on HPLMN, no search for PLMNs expected .....	770
3.28.5	MMG0654: Search for a more preferred PLMN, better PLMN found.....	771
3.28.6	MMG0655: Search for a more preferred PLMN, no better PLMN found.....	773
3.28.7	MMG0656: Search for a more preferred PLMN, problems .....	774
3.28.8	MMG0657: Search for a more preferred PLMN, MMI search also (I).....	777
3.28.9	MMG0658: Search for a more preferred PLMN, MMI search also (II).....	779
3.28.10	MMG0659: Search for a more preferred PLMN and T3212 - preamble test ...	782
3.28.11	MMG0660: Interworking of T3212 and T_HPLMN, no better PLMN.....	786
3.28.12	MMG0661: Interworking of T3212 and T_HPLMN, HPLMN found .....	787
3.29	Engineering mode.....	791
3.29.1	MMG0670: EM-Identity Request during Location Updating .....	791
3.29.2	MMG0671: EM-Authentication Request .....	792
3.30	GPRS related registration .....	794
3.30.1	MMG1000: Activation of MS as class A, BC, BG, CG mobile.....	794
3.30.2	MMG1001: Positive outcome of MMGMM_REG_REQ, no SIM .....	794
3.30.3	MMG1002: Negative outcome of MMGMM_REG_REQ.....	795
3.30.4	MMG1003: SIM inserted, GMM requests RR activation.....	796
3.30.5	MMG1004: Full Service in GSM, no ATTACH needed .....	797
3.30.6	MMG1005: IMSI ATTACH LUP needed after cell selection .....	798
3.30.7	MMG1006: Negative outcome of MMGMM_REG_REQ with SIM - limited.....	799
3.30.8	MMG1007: Negative outcome of MMGMM_REG_REQ with SIM - no cell .....	799
3.30.9	MMG1008: SIM inserted, call active, GMM requests RR activation.....	800
3.30.10	MMG1009: GMM requires update on the cell, periodic .....	801
3.30.11	MMG1010: GMM requires update on the cell, MM is updated, no periodic ...	804
3.30.12	MMG1011: GMM requires update on the cell, attach or periodic.....	805
3.30.13	MMG1012: Update on the cell required, attach, non-imm. success.....	807
3.30.14	MMG1013: Unsuccessfull remote controlled periodic location update.....	811
3.30.15	MMG1014: CM service request in IDLE ATTEMPT TO UPDATE, I.....	815
3.30.16	MMG1015: CM service request in IDLE ATTEMPT TO UPDATE, II.....	819
3.30.17	MMG1016: Call attempt causing LUP with follow on proceed .....	823
3.30.18	MMG1017: Emergency call with GPRS, ATTEMPT TO UPDATE.....	827
3.30.19	MMG1018: Emergency setup required while waiting for GMM update .....	830
3.30.20	MMG1019: Expiry of T3212 in ATTEMPTING TO UPDATE state .....	834

3.30.21	MMG1020: Successfull combined attach.....	834
3.30.22	MMG1021: Unsuccessful combined attach .....	836
3.30.23	MMG1022: Unsuccessful combined attach, fieldstrength jump, T_REG .....	837
3.30.24	MMG1023: T3212 not causing updating.....	839
3.30.25	MMG1024: T3212 running after MM's own location updating procedure .....	840
3.30.26	MMG1025: T3212 started after MMGMM_START_T3212_REQ I.....	842
3.30.27	MMG1026: T3212 started after MMGMM_START_T3212_REQ II.....	846
3.30.28	MMG1027: Unsuccessful combined attach .....	849
3.30.29	MMG1028: Unsuccessful combined attach, IMSI unknown in HLR .....	849
3.30.30	MMG1029: Update on the cell required, periodic, non-imm. success .....	850
3.30.31	MMG1030: Update on the cell required, periodic, non-imm. success .....	854
3.30.32	MMG1031: T3212 running after MM's own location updating procedure .....	857
3.30.33	MMG1032: No action after successful combined attach .....	860
3.30.34	MMG1033: Unsuccessful combined attach, normal updating follows.....	860
3.30.35	MMG1035: MM receives #14 from GMM, NW list exists, NW mode II .....	868
3.30.36	MMG1036: MM receives #14 from GMM, class CG, NW list exists.....	873
3.30.37	MMG1037: MM has #14 forbidden list, class BG .....	876
3.30.38	MMG1038: MM has #14 forbidden list, class CG .....	878
3.30.39	MMG1040: User requires different network manually .....	880
3.30.40	MMG1050: Normal updating with cell reselection .....	885
3.30.41	MMG1051: Normal updating with cell reselection .....	891
3.30.42	MMG1053: SIM inserted, GMM requests RR activation .....	893
3.30.43	MMG1054: Full Service in GSM, no ATTACH needed .....	895
3.30.44	MMG1055: T3212 change in full service mode .....	897
3.30.45	MMG1056: T3212 change in full service mode .....	897
3.30.46	MMG1060: IMSI ATTACH, MM_WAIT_FOR_RR_CONN_LUP .....	898
3.30.47	MMG1061: IMSI ATTACH, MM_LUP_INITIATED.....	900
3.30.48	MMG1062: IMSI ATTACH, MM_LUP_REJECTED.....	900
3.30.49	MMG1063: IMSI ATTACH, MM_WAIT_FOR_NW_CMD .....	901
3.30.50	MMG1064: IMSI ATTACH, MM_IDLE_NORMAL_SERVICE (T3211).....	902
3.31	GPRS related deregistration .....	903
3.31.1	MMG1100: NREG_REQ in IDLE mode (SIM remove, no further action).....	903
3.31.2	MMG1101: NREG_REQ in IDLE mode (Off, no further action) .....	903
3.31.3	MMG1102: NREG_REQ in IDLE mode (SIM remove, no IMSI DETACH) .....	904
3.31.4	MMG1103: NREG_REQ in IDLE mode (SIM remove, no IMSI DETACH) .....	905
3.31.5	MMG1104: NREG_REQ in IDLE mode, GPRS authentication failed .....	906

3.31.6	MMG1148: Network search after #2 by GPRS.....	907
3.31.7	MMG1149: Network search after #8 by GPRS.....	908
3.31.8	MMG1150: NREG_REQ in IDLE mode, cause #2, cause #8.....	909
3.31.9	MMG1151: NREG_REQ in IDLE mode, cause #17 (network failure).....	910
3.31.10	MMG1152: NREG_REQ in IDLE mode after AUTH FAIL req from GMM .....	910
3.31.11	MMG1153: Remote controlled detach without SIM remove/switch off I .....	911
3.31.12	MMG1154: Remote controlled detach without SIM remove/switch off II .....	912
3.31.13	MMG1155: Remote controlled detach without SIM remove/switch off III .....	913
3.31.14	MMG1156: Remote controlled detach without SIM remove/switch off IV .....	914
3.31.15	MMG1160: MM Connection before deregistration, preliminary test .....	915
3.31.16	MMG1161: Remote controlled detach without SIM remove/switch off V .....	916
3.31.17	MMG1162: Remote controlled detach without SIM remove/switch off VI .....	918
3.31.18	MMG1163: Remote controlled detach without SIM remove/switch off VII .....	919
3.31.19	MMG1164: Remote controlled detach without SIM remove/switch off VIII .....	920
3.31.20	MMG1165: Remote controlled detach without SIM remove/switch off VIII.....	921
3.31.21	MMG1166: Soft switch off after remote controlled IMSI DETACH .....	923
3.31.22	MMG1170: Switch on after MMI requested deregistration, IMSI ATTACH, I ...	923
3.32	GPRS related CM service .....	926
3.32.1	MMG1200: MM wants to establish a RR connection for CM, GPRS is active .....	926
3.32.2	MMG1201: MM allowed to establish a call for CM, RR releases.....	927
3.32.3	MMG1202: MM allowed to establish a call for CM, RR aborts .....	928
3.32.4	MMG1203: MM wants to establish a RR connection for CM, GPRS is active .....	929
3.32.5	MMG1204: MM performs two MOCs in a row after combined attach .....	929
3.32.6	MMG1205: MM receives RR_RELEASE_IND in IDLE state .....	932
3.32.7	MMG1206: RR_RELEASE_IND in state MM_WAIT_FOR_RR_CONN_MM .....	933
3.32.8	MMG1207: RR_RELEASE_IND in state MM_WAIT_FOR_RR_CONN_MM .....	934
3.32.9	MMG1208: Clash of establishment MO/MT in case of SMS.....	935
3.32.10	MMG1210: MM receives MT in IDLE mode .....	937
3.32.11	MMG1211: Interworking of cell selection in new LA and MO call .....	939
3.32.12	MMG1212: MM performs a MOC and enters MM_CONN_ACTIVE .....	944
3.33	Cell selection/reselection in RR, normal updating .....	946
3.33.1	MMG1300: New location area in full service condition .....	946
3.33.2	MMG1301: Back to old updated area after random access failure.....	946
3.33.3	MMG1302: RR reselects another cell in same location area during update.....	948
3.33.4	MMG1303: Third location area in the middle of the procedure .....	951
3.33.5	MMG1304: Back to old updated area after T3211 started .....	952

<b>3.34</b>	<b>SIM removal while GPRS active .....</b>	<b>954</b>
3.34.1	MMG1400: SIM removal while CM connected requested / CM connected .....	954
3.34.2	MMG1401: SIM removal while CM connected, IMSI DETACH.....	956
3.34.3	MMG1410: SIM removal IMSI ATTACH, non-Idle.....	958
3.34.4	MMG1411: SIM removal IMSI ATTACH, MM_WAIT_FOR_NW_CMD .....	959
3.34.5	MMG1412: SIM removal IMSI ATTACH, MM_IDLE_NORMAL_SERVICE.....	961
3.34.6	MMG1413: Interworking of IMSI ATTACH, Call and SIM removal.....	963
3.34.7	MMG1414: Interworking of Normal Update, Emergency Call and SIM removal	966

### 0.1 Document History

Document Id.	Date	Author	Remarks
6147.403.97.100	09-Jul-97	Stefan Lemke et al	Initial as GSM only test document
8443.401.01.001	27-Oct-00	Harald Mommer et. al.	Copied document for MMGMM SAP, GPRS enabled
8443.401.01.002	09-Mar-01	HM	Fixed T3212 configuration, SAT testcases
8443.401.01.003	27-Mar-01	HM	Revised some testcases after protocol change
8443.401.01.004	02-May-01	HM	Revised some testcases after protocol change
8443.401.01.005	07-May-01	HM	Added some GPRS testcases after stack change
8443.401.01.006	20-Jun-01	HM	Fixed document after SAP change
8443.401.01.007	25-Jun-01	HM	Integrated all remaining MM.DOC additions
8443.401.01.008	03-Jul-01	HM	Runs with TAP2 without TAP_VERSION=OLD switch
8443.401.01.009	06-Aug-01	HM	Added some testcases after protocol stack change
8443.401.01.010	16-Aug-01	HM	Changed existing testcases for 3-digit-MNC
8443.401.01.011	02-Nov-01	HM	Fixed some broken testcases after G23 changes
8443.401.01.012	29-Nov-01	HM	Fixed some broken testcases after G23 changes
8443.401.01.013	7-Dec-01	HM	Adapted testcases for MMGMM SAPI changes
8443.401.01.014	11-Dec-01	HM	Added testcases for stored MMGMM_NET_REQ
8443.401.01.015	04-Jan-02	HM	Revised MMG1302
8443.401.01.016	16-Jan-02	HM	Revised, imm. fs indication if only IMSI ATTACH
8443.401.01.017	18-Jan-02	HM	Revised, MMGMM_TMSI_IND when TMSI changes

8443.401.01.018	23-Jan-02	HM	Revised, TMSI REALLOC now implicitly updates
8443.401.01.019	29-Jan-02	HM	Revised after addition of cid into some primitives
8443.401.01.020	06-Feb-02	HM	Revised after increasing size of forbidden PLMN list
8443.401.01.021	07-Feb-02	HM	Testcases for 03.22 clause 4.4.4 enhancement
8443.401.01.022	18-Feb-02	HM	Testcase MMG1033 to test part of 11.10 44.2.1.2.8, testcases MMG0155, MMG0156 reworked/added.
8443.401.01.023	27-Feb-02	OT	Testcases for Engineering mode added (MMG0660-1)
8443.401.01.024	09-Apr-02	HM	Merged with GPRS 1.3.2
8443.401.01.025a	16-May-02	HM	Made document compilable again after changes
8443.401.01.025b	16-May-02	HM	reg. primitives have resumption field now
8443.401.01.025c	16-May-02	HM	MMGMM_CM_RELEASE_IND in IDLE etc. (MMG1205, MMG1035-MMG1038)
8443.401.01.026	22-May-02	HM	Classmark 3 always indicated in classmark 2
8443.401.01.027	11-Jun-02	HM	Added MMG1211
8443.401.01.028	27-Jul-02	HM	MMG0028, MMG0060 added.
8443.401.01.029	05-Aug-02	HM	Changed classmark 2 to reflect PS changes.
8443.401.01.030	07-Aug-02	HM	Cause concept, 2nd attempt
8443.401.01.031	12-Aug-02	HM	Adaptions for PPLMN search.
8443.401.01.032	27-Sep-02	HM	RC update => all CM services OK MMG1015, MMG1016, MMG1211 updated
8443.401.01.033	05-Nov-02	HM	Testcase #1301 and PS fixed
8443.401.01.034	20-Nov-02	HM	MMG0056 updated, MMG1206, MMG1207 new
8443.401.01.035	21-Nov-02	HM	Fixed MMG0155x, MMREG SAP change necessary
8443.401.01.036	06-Jan-03	HM	Testcase #1056 added after PS fix
8443.401.01.037	11-Jan-03	HM	Testcase #106X, #1212, #14xx added after PS fix
8443.401.01.038	27-Jan-03	HM	Merge from 1.3.3 to g23m completed
8443.401.01.039	03-Feb-03	HM	#0182 removed, #0181 revised, #003x new
8443.401.01.040	06-Feb-03	HM	#1050, #1051 new
8443.401.01.041	27-Feb-03	HM	#0046 new (Issue #8925)
8443.401.01.042	11-Mar-03	HM	#0048 fixed, #0084-#0088 new (Issue #8707)
8443.401.01.043	24-Apr-03	HM	#0089-#0093, #1208 new (Issue #9838) This is the final version of the document

### 0.3 Abbreviations

AGCH	Access Grant Channel
BCCH	Broadcast Control Channel
BS	Base Station
BSIC	Base Station Identification Code
CBCH	Cell Broadcast Channel
CBQ	Cell Bar Qualify
CC	Call Control
CCCH	Common Control Channel
CCD	Condat Coder Decoder
CKSN	Ciphering Key Sequence Number
C/R	Command / Response
C1	Path Loss Criterion
C2	Reselection Criterion
DCCH	Dedicated Control Channel
DISC	Disconnect Frame
DL	Data Link Layer
DM	Disconnected Mode Frame

EA	Extension Bit Address Field
EL	Extension Bit Length Field
EMMI	Electrical Man Machine Interface
F	Final Bit
FACCH	Fast Associated Control Channel
FHO	Forced Handover
GP	Guard Period
GSM	Global System for Mobile Communication
HPLMN	Home Public Land Mobile Network
I	Information Frame
IMEI	International Mobile Equipment Identity
IMSI	International Mobile Subscriber Identity
Kc	Authentication Key
L	Length Indicator
LAI	Location Area Information
LPD	Link Protocol Discriminator
M	More Data Bit
MCC	Mobile Country Code
MM	Mobility Management
MMI	Man Machine Interface
MNC	Mobile Network Code
MS	Mobile Station
NCC	National Colour Code
NECI	New Establishment Causes included
N(R)	Receive Number
N(S)	Send Number
OTD	Observed Time Difference
P	Poll Bit
PCH	Paging Channel
PDU	Protocol Description Unit
P/F	Poll / Final Bit
PL	Physical Layer
PLMN	Public Land Mobile Network
RACH	Random Access Channel
REJ	Reject Frame
RNR	Receive Not Ready Frame
RR	Radio Resource Management
RR	Receive Ready Frame
RTD	Real Time Difference
SABM	Set Asynchronous Balanced Mode
SACCH	Slow Associated Control Channel
SAP	Service Access Point
SAPI	Service Access Point Identifier
SDCCH	Slow Dedicated Control Channel
SIM	Subscriber Identity Module
SMS	Short Message Service
SMSCB	Short Message Service Cell Broadcast
SS	Supplementary Services

TCH	Traffic Channel
TCH/F	Traffic Channel Full Rate
TCH/H	Traffic Channel Half Rate
TDMA	Time Division Multiple Access
TMSI	Temporary Mobile Subscriber Identity
UA	Unnumbered Acknowledgement Frame
UI	Unnumbered Information Frame
VPLMN	Visiting Public Land Mobile Network
V(A)	Acknowledgement State Variable
V(R)	Receive State Variable
V(S)	Send State Variable

## 0.4 Terms

Entity:	Program which executes the functions of a layer
Message:	A message is a data unit which is transferred between the entities of the same layer (peer-to-peer) of the mobile and infrastructure side. Message is used as a synonym to protocol data unit (PDU). A message may contain several information elements.
Primitive:	A primitive is a data unit which is transferred between layers on one component (mobile station or infrastructure). The primitive has an operation code which identifies the primitive and its parameters.
Service Access Point	A Service Access Point is a data interface between two layers on one component (mobile station or infrastructure).

## 1 Overview

The Protocol Stacks are used to define the functionality of the GSM protocols for interfaces. The GSM specifications are normative when used to describe the functionality of interfaces, but the stacks and the subdivision of protocol layers does not imply or restrict any implementation.

The protocol stack for GPRS consists of several entities. Each entity has one or more service access points, over which the entity provides a service for the upper entity.

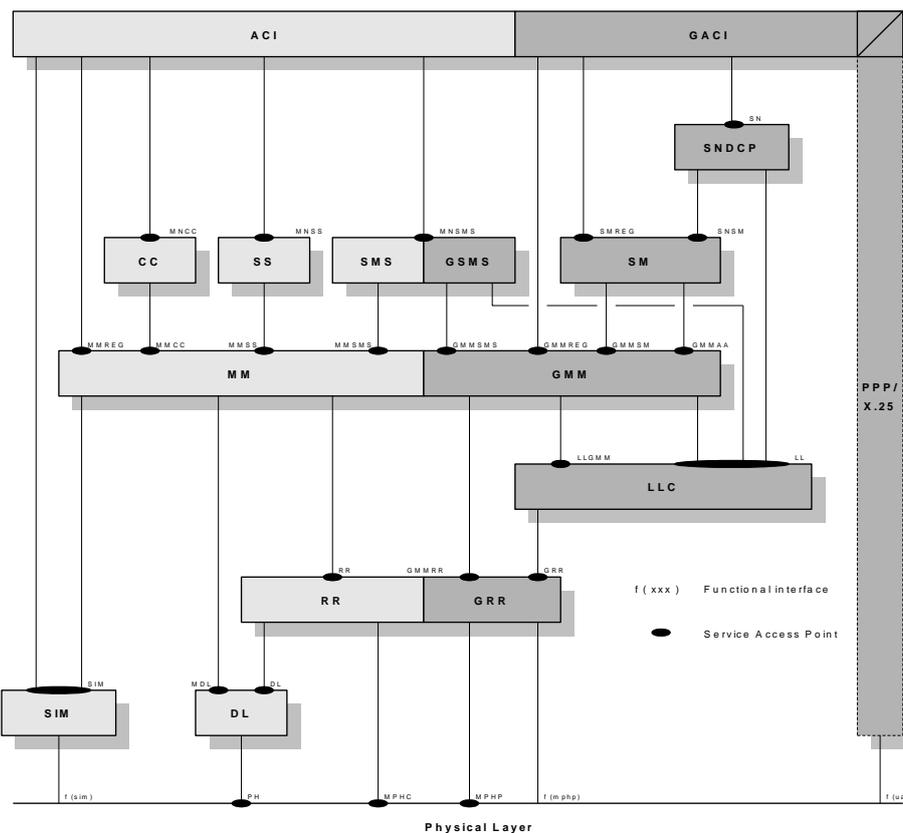

Figure 1-1: Architecture of the GSM/GPRS protocol stack

The information units passed via the SAPs are called primitives and consists of an operation code and several parameters. See the Users Guide for details.

The entities of the GPRS protocol stack are:

### 1.1 GRR (RLC/MAC) – Radio Link Control/Medium Access Control

This layer contains two functions: The Radio Link Control function provides a radio-solution-dependent reliable link. The Medium Access Control function controls the access signalling (request and grant) procedures for the radio channel, and the mapping of LLC frames onto the GSM physical channel.

### 1.2 LLC – Logical Link Control

The LLC entity provides multiple highly reliable logical links for asynchronous data transfer between the MS and the network. It supports variable-length information frames, acknowledged and unacknowledged data transfer, flow and sequence control, error detection and recovery, notification of unrecoverable errors, user identity confidentiality, and ciphering of user and signaling data.

### 1.3 GMM – GPRS Mobility Management

The GMM entity provides procedures for the mobility of the MS, such as informing the network of its present location, and user identity confidentiality. It manages the GMM context (attach, detach, routing area updating), supports security functions such as authentication of user and MS, controls ciphering of data, and initiates the response to paging messages.

### 1.4 SM – Session Management

The main function of the session management (SM) is to support PDP context handling of the user terminal. Session Management activates, modifies and deletes the contexts for packet data protocols (PDP). Session Management services are provided at the SMREG-SAP and the SNSM-SAP for anonymous and non-anonymous access. The non-anonymous and anonymous access procedures for PDP context activation and PDP context deactivation are available at the SMREG-SAP. In addition there exists a PDP context modification for non-anonymous PDP contexts.

### **1.5 SNDCP - Subnetwork Dependant Convergence Protocol**

SNDCP carries out all functions related to transfer of Network layer Protocol Data Units (N-PDUs) over GPRS in a transparent way. SNDCP helps to improve channel efficiency by means of compression techniques. The set of protocol entities above SNDCP consists of commonly used network protocols. They all use the same SNDCP entity, which then performs multiplexing of data coming from different sources to be sent using the service provided by the LLC layer.

### **1.6 GACI – GPRS Application Control Interface**

The GACI is the GPRS extension of the ACI. It is specified in GSM 07.07 and 07.60. It is responsible for processing of the GPRS related AT Commands to setup, activate and deactivate the PDP context parameter. It also provides functionality for the interworking between GMM/SM/SNDCP and a packet oriented protocol like PPP.

### **1.7 USART - Universal Synchronous Asynchronous Receiver Transmitter Driver**

The USART is a hardware component that facilitates a connection between the mobile station and terminal equipment (e.g. a PC). This interface uses some of the circuits described in V.24.

The data exchange provided by this unit is serial and asynchronous (synchronous communication is not in the scope of this document). A driver that uses interrupts to manage a circular buffer for the sending and receiving direction is necessary in order to use this component in the GPRS. The driver has to be able to perform flow control.

### **1.8 TOM – Tunnelling of Messages**

The TOM entity is present if and only if HS136 is supported (the feature flag FF\_HS136 is enabled).

The main function of TOM is to tunnel non-GSM signalling messages between the MS and the SGSN. The only non-GSM signalling which is currently supported by TOM is for the EGPRS-136 system (according to TIA/EIA-136-376). Data transfer in both uplink and downlink direction is possible. Two different priorities (high, low) of signalling data transfer are supported. TOM uses the unacknowledged mode of LLC and the acknowledged mode of GRR (RLC/MAC).

This document describes the tests for Mobility Management.

**Parametrization**

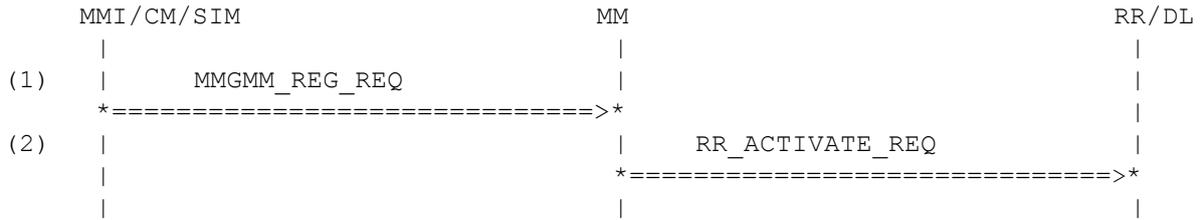

<u>Primitive</u>	<u>Parameter</u>	<u>Value</u>
History:	04.07.97	PZ
	04.02.02	HM
		Initial Registration
		Added delay to allow PS to start properly

### 3.2 Registration

#### 3.2.1 MMG0021: Registration without SIM card

**Description:** The reaction of MM to a request for registration with unplugged SIM card is tested. MM receives a MMR-REG request primitive and responds by issuing a RR-ACTIVATE request primitive in which the op field is set to 'limited service, no SIM'.

**Preamble:** MMG0001

#### Parametrization

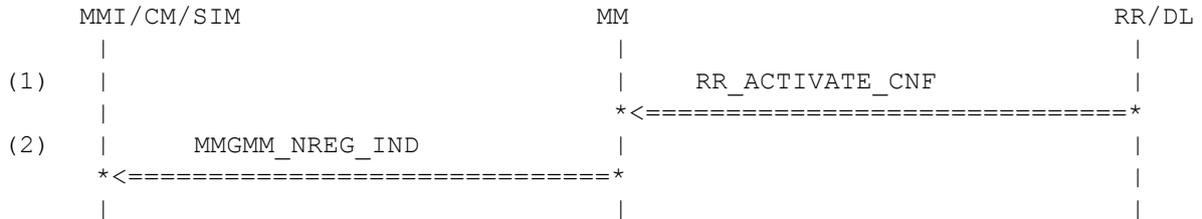

Primitive	Parameter	Value
(1) MMGMM_REG_REQ	service_mode	SERVICE_MODE_FULL
	reg_type	REG_GPRS_INACTIVE
	mobile_class	MMGMM_CLASS_CC
(2) RR_ACTIVATE_REQ	plmn	PLMN_NO_ID

	tmsi_struct	MOB_ID_NO_ID
	thplmn	NOT_USED
	bcch_info	NOT_USED
	cell_test	CELL_TEST_DISABLE
	gprs_indication	GPRS_NO

History:	09.07.97	HK	Initial
	06.08.97	DL	Revised
	12.08.97	HK	Revised

### 3.2.2 MMG0022: Mobile station is synchronous to a Cell

**Description:** MM is informed by means of a RR-ACTIVATE confirmation primitive that the mobile station is synchronous to a cell. The network identification is forwarded to MMI as part of a MMR-NREG indication primitive.

**Preamble:** MMG0021

#### Parametrization

<u>Primitive</u>	<u>Parameter</u>	<u>Value</u>
(1) RR_ACTIVATE_CNF	op	OP_MODE_NO_SIM_LIM_SERV
	mm_info	MM_INFO

	12.04.00	HM	Revised

### 3.2.4 MMG0024: Successful conclusion of cell selection - cell with same LAI

**Description:** Successful conclusion of cell selection is signalled by the receipt of a RR-ACTIVATE confirmation primitive. MM forwards the PLMN identification to MMI in the form of a MMR-REG confirmation primitive.

**Preamble:** MMG0023A

	MMI/CM/SIM	MM	RR/DL

### 3.2.7 MMG0027: Mobile station is synchronous to a Cell (reestablish allowed in cell)

**Description:** MM is informed by means of a RR-ACTIVATE confirmation primitive that the mobile station is synchronous to a cell. The network identification is forwarded to MMI as part of a MMR-NREG indication primitive. This testcase is equivalent to testcase MMG0022 with the difference that call reestablishment is allowed in the cell (MM\_INFO -> MM\_INFO\_2).

**Preamble:** MMG0021

### 3.2.8 MMG0028: Updated, IMSI Attach, TMSI reallocation

**Description:** MM receives a SIM-INSERT indication primitive and initiates cell selection by issuing a RR-ACTIVATE request primitive. Successful conclusion of cell selection is signalled by the receipt of a RR-ACTIVATE confirmation primitive. MM forwards the PLMN identification to MMI in the form of a MMR-REG confirmation primitive. An IMSI attach is started and successfully finished, a new TMSI is allocated.

<A> IMSI ATTACH only announced by the cell

<B> IMSI ATTACH and PERIODIC announced by the cell

**Preamble:** MMG0022

### 3.3 Connection Establishment

#### 3.3.1 MMG0041: Establish request prior to existing RR Connection

**Description:** MM receives a MMCC-ESTABLISH request primitive from CC and requests a RR connection by sending a CM SERVICE REQUEST message to RR as part of a RR-ESTABLISH request primitive.

**Preamble:** MMG0024

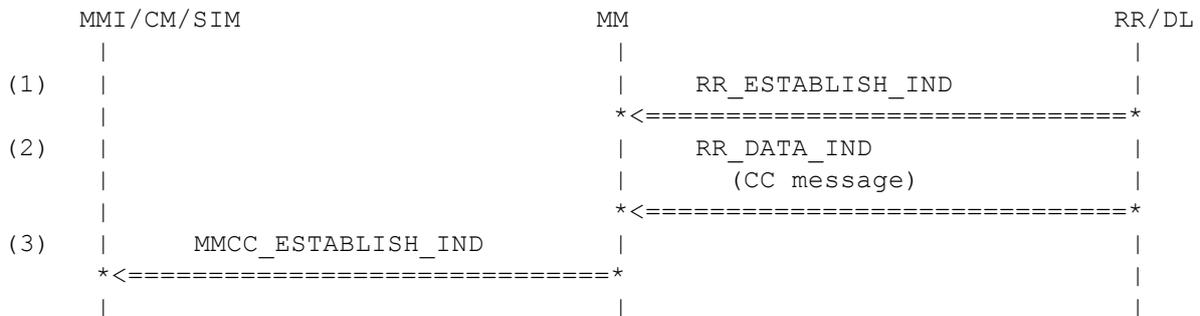

#### Parametrization

Primitive	Parameter	Value
(1) MMCC_ESTABLISH_REQ	ti	TI_2

### 3.3.14 MMG0055: RR\_ESTABLISH\_IND in state MM\_WAIT\_FOR\_RR\_CONN\_MM

**Description:** MM receives a RR\_ESTABLISH\_IND in state MM\_WAIT\_FOR\_RR\_CONN\_MM. This is a clash case. The MT connection has precedence, a MNCC\_RELEASE\_IND is sent for the MO connection and the MT connection is going to be established.

**Preamble:** MMG0041

#### Parametrization

	<u>Primitive</u>	<u>Parameter</u>	<u>Value</u>
(1)	RR_ESTABLISH_IND	param	NOT_USED
(2)	MMCC_RELEASE_IND	ti	TI_2
		cause	MMCS_INT_PREEM

		sdu	CC_MESSAGE
History:	19.04.00	HM	Initial

### 3.3.15 MMG0056: RR\_RELEASE\_IND in state MM\_WAIT\_FOR\_RR\_CONN\_MM

**Description:** MM receives a RR\_RELEASE\_IND in state MM\_WAIT\_FOR\_RR\_CONN\_MM. This is a clash case. There is an incoming MT call already in RR, the MT connection has precedence, RR sends a RR\_RELEASE\_IND for the MO connection and then the MT connection is going to be established. It is important here that the L2 connection is not releases by issuing a MDL\_RELEASE\_REQ.

**Preamble:** MMG0041

### 3.3.16 MMG0057: ABORT (Illegal ME)

**Description:** The MM connection is confirmed by the network in the form of a RR-ESTABLISH primitive followed by with an ABORT message containing the cause RC\_ILLEGAL\_ME. MM invalidates the SIM and changes to State 9 (MM\_WAIT\_FOR\_NW\_CMD). After RR connection release the MMI is informed about the limited service condition. No further calls (except emergency calls) are possible.

**Preamble:** MMG0041

### 3.5 Connection Release

#### 3.5.1 MMG0081: Release of Connection via MS

**Description:** Following the release of a connection M issues a MDL-RELEASE request primitive and returns to State 1 Idle Updated.

**Preamble:** MMG0043

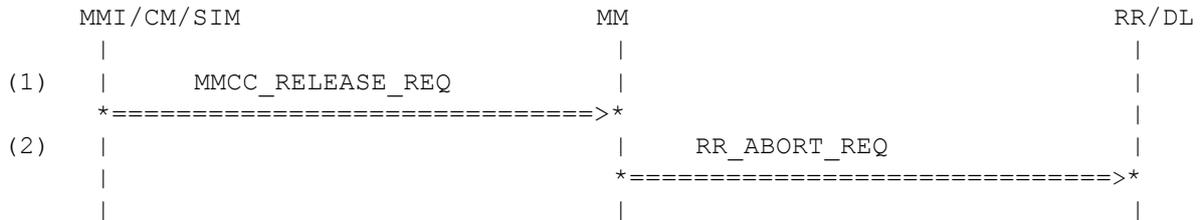

**Parametrization**

<u>Primitive</u>	<u>Parameter</u>	<u>Value</u>
(1) MMCC_RELEASE_REQ	ti	TI_2
(2) RR_RELEASE_IND	cause	RRCS_NORM
	sapi	SAPI_0
	gprs_resumption	GPRS_RESUMPTION_NOT_ACK
(3) MDL_RELEASE_REQ	ch_type	NOT_PRESENT_8BIT
	sapi	SAPI_0
History:	09.07.97	HK Initial

### 3.5.2 MMG0082: MMCC\_REL\_REQ in State 14

**Description:** MM receives a MMCC-RELEASE request primitive from CC before a RR connection has been made. MM issues a RR-ABORT request.

**Preamble:** MMG0041

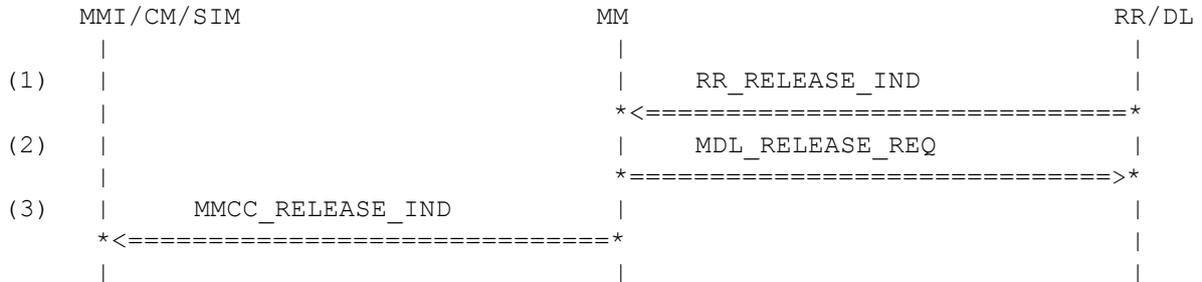

#### Parametrization

	Primitive	Parameter	Value
(1)	MMCC_RELEASE_REQ	ti	TI_2
(2)	RR_ABORT_REQ	abcs	ABCS_NORM
History:	10.07.97	HK	Initial

### 3.5.3 MMG0083: Release of Connection via BS

**Description:** MM receives a RR-RELEASE request primitive from RR. MM issues a MDL-RELEASE request primitive to DL followed by a MMCC-RELEASE request primitive.

**Preamble:** MMG0043

#### Parametrization

<u>Primitive</u>	<u>Parameter</u>	<u>Value</u>
(1) RR_RELEASE_IND	cause	RRCS_NORM
	sapi	SAPI_0
	gprs_resumption	GPRS_RESUMPTION_NOT_ACK

	cause	RRCS_NORM
History:	09.07.97	HK Initial

### 3.5.4 MMG0084: Clash case in MM\_WAIT\_FOR\_ADD\_MM\_CONN (I), success

**Description:** In state MM\_CONN\_ACTIVE (6) a request to establish a second call is received by MM. MM sends via the existing MM connection a CM SERVICE REQUES message to the network and awaits the acception of the additionally requested MM connection. In this moment the active connection is released by RR. MM indicates the release of the active connection to the connection management and retries to establish the new CM connection. It is assumed that the retry is successful, the network accepts the CM SERVICE REQUEST and the successful establishment of a MM connection is confirmed to the CM.

### 3.5.11 MMG0091: Clash of MO/MT SMS, RR\_RELEASE\_IND, MT not okay

**Description:** A MO SMS is to be established while RR is busy with responding to paging for a MT SMS (or whatever CM service). Instead of a RR\_ESTABLISH\_CNF for the MO SMS we get a RR\_RELEASE\_IND indicating there was a collision. As there were problems in RR responding to paging, the MT SMS is not established, instead MM receives a RR\_RELEASE\_IND for the MT SMS. The CM service request for the MO SMS is sent to the network when MM receives the RR\_RELEASE\_IND for the MT in IDLE state.

### 3.5.12 MMG0092: Clash case in MM\_CONN\_ACTIVE, CM\_SERV\_REJ, success

**Description:** In state MM\_CONN\_ACTIVE (6) a request to establish a second call is received by MM. MM sends via the existing MM connection a CM SERVICE REQUES message to the network and awaits the acception of the additionally requested MM connection. In this moment the active connection is released by CM. Before the RR connection is released by RR a CM SERVICE REJECT is. MM retries to establish the new CM connection. It is assumed that the retry is successful, the network accepts the CM SERVICE REQUEST and the successful establishment of a MM connection is confirmed to the CM.

**Preamble:** MMG0047

### 3.5.13 MMG0093: MM\_CONN\_ACTIVE, CM\_SERV\_REJ, no clash, no repeat

**Description:** In state MM\_CONN\_ACTIVE (6) a request to establish a second call is received by MM. MM sends via the existing MM connection a CM SERVICE REQUES message to the network and awaits the acception of the additionally requested MM connection. The CM service request is rejected by the network. As we still have an active connection the clash case is not given here, therefore the CM SERVICE REJECT is handled exactly as described in GSM 04.08, this means, the CM layer is informed that the connection establishment failed and no reattempt is made.

**Preamble:** MMG0047

### 3.6.7 MMG0107: Connection request stored until Location Updating complete

**Description:** MM receives a MMCC-ESTABLISH request primitive from MM and a RR-ESTABLISH confirmation primitive from RR. MM stores the connection request until Location Updating has been completed. The mobile-terminated call is then processed (RR-SYNC request, MMR-REG confirmation primitive). Following completion of the MOT in the form of a RR-RELEASE indication primitive, RR releases the requested connection. After having completely released the RR connection, this is reestablished immediately to satisfy the pending connection request. For this test, a TEST SIM is inserted into the mobile.

**Preamble:** MMG0115

	MMI/CM/SIM	MM	RR/DL
(1)	MMCC_ESTABLISH_REQ

### 3.6.8 MMG0108: Location Updating Reject (PLMN not allowed)

**Description:** A request for a RR connection for Location Updating is confirmed in the form of a RR-ESTABLISH confirmation primitive. MM changes to State 3 (Location Updating initiated). MM is then notified in the form of a LOCATION-UPDATING-REJECT message that PLMN roaming is not allowed for the mobile station. MM releases the RR connection by issuing a MDL-RELEASE request primitive and changes to State 11 (Idle Roaming not allowed).

### 3.6.9 MMG0109: Change of Area in Update Status U3

**Description:** MM receives a RR-ACTIVATE indication primitive indicating a change of location area while in Update Status U3 (Roaming not allowed). MM starts Location Updating by sending a LOCATION UPDATING REQ message. After completion of the Location Updating, MM is in State 1 (Idle updated).

**Preamble:** MMG0108

### 3.6.10 MMG0110: Location Updating Reject (LAI roaming not allowed)

**Description:** While in Update Status U3 (Roaming not allowed) MM receives a RR-ESTABLISH confirmation primitive followed by a LOCATION UPDATING REJECT message indicating that LAI roaming is not permitted for the mobile station. MM releases the RR connection and then issues a SIM-MM-UPDATE request primitive.

### 3.6.12 MMG0112: Normal Location Updating rejected four times

**Description:** A Normal Location Updating has been started in Update Status 2 (Idle not updated). A LOCATION UPDATING REJ message is received and MM releases the RR connection, initiates synchronization with RR and request SIM for an update. This sequence is carried out four times; each attempt is rejected (LOCATION UPDATING REJ message). Following the fourth attempt MM remains in Update Status 2 (Idle not Updated) and issues a MMR-NREG indication primitive.

**Preamble:** MMG0101

### 3.6.15 MMG0115: MS in new Location Area (TEST SIM inserted)

**Description:** A new location area is signalled to MM in the form of a RR-ACTIVATE confirmation primitive. MM starts normal Location Updating by issuing a LOCATION UPDATING REQ message as part of a RR-ESTABLISH request primitive and enters State 13 (Wait for RR-Connection - Location Updating).

**Preamble:** MMG0023B

MMI/CM	MM	RR/DL
(1)	RR_ACTIVATE_CNF	
(2)	RR_ESTABLISH_REQ (LOCATION UPDATING REQ)

### 3.6.16 MMG0116: Location Updating Reject (PLMN not allowed), not HPLMN

**Description:** A request for a RR connection for Location Updating is confirmed in the form of a RR-ESTABLISH confirmation primitive. MM changes to State 3 (Location Updating initiated). MM is then notified in the form of a LOCATION-UPDATING-REJECT message that PLMN roaming is not allowed for the mobile station. MM releases the RR connection by issuing a MDL-RELEASE request primitive and changes to State 11 (Idle Roaming not allowed). The PLMN for which the LOCATION UPDATING REJECT with cause PLMN NOT ALLOWED received is \*not\* the HPLMN, thus it \*will\* be added to the forbidden list.

**Preamble:** MMG0105

### 3.6.17 MMG0117: Location Updating Reject (PLMN not allowed), mode AUTO

**Description:** The mobile station is requested to register in automatic mode. The HPLMN is not present. The first PLMN the mobile station tries to register is forbidden and newly entered into the forbidden PLMN list. Then the second found PLMN is tried. It is expected that the registration attempt into the second found PLMN works and we enter full service state.

PLMN\_123\_44 First found PLMN, forbidden

PLMN\_123\_31 Second found PLMN, allowed

### 3.6.18 MMG0118: Location Updating Reject (IMSI unknown in HLR), mode AUTO

**Description:** The mobile station is requested to register in automatic mode. The HPLMN is not present. The first PLMN the mobile station tries to register sends LOCATION UPDATING REJECT with cause #2 (IMSI unknown in HLR). It is expected that no further registration attempt will be tried into the second found PLMN, even if an RR\_ACTIVATE\_IND with op\_mode OP\_SIM\_AUTO\_PLMNSRCH\_FS will be received.  
 PLMN\_123\_44 First found PLMN, sends reject with cause #2  
 PLMN\_123\_31 Second found PLMN

### 3.6.19 MMG0120: Receive LUP rejects with cause #11, 6 forbidden PLMNs total now

**Description:** The mobile is switched on, automatic mode. A SIM is inserted which contains 4 forbidden PLMNs. The mobile is switched on, 6 PLMNs are found, all forbidden. Two update attempts in automatic mode are done, in both cases reject cause #11 is received. It is checked that afterwards all forbidden PLMNs are stored in the forbidden PLMN list and no further updating attempt will be performed if the same list is offered again by RR.

Initial forbidden: MCC=123, MNC=34  
 MCC=123, MNC=35  
 MCC=123, MNC=36  
 MCC=123, MNC=37  
 MCC=123, MNC=44

Final forbidden: MCC=123, MNC=34  
 MCC=123, MNC=35  
 MCC=123, MNC=36  
 MCC=123, MNC=37  
 MCC=123, MNC=44  
 MCC=123, MNC=32

### 3.6.20 MMG0121: Non-forbidden PLMN offered in limited service

**Description:** The mobile has 5 forbidden PLMNs in the forbidden list. The first power campaign delivers a list of PLMNs, all of these are member of the forbidden list. It is checked that no update attempt is performed in automatic mode. The second power campaign delivers a list of PLMNs, the last PLMN offered by RR is not on any forbidden list, maybe suitable for full service. An update attempt is performed, the network answers by a LOCATION UPDATING REJECT message, cause #11, PLMN NOT ALLOWED. The PLMN is added to the forbidden PLMN list (in SIM). A third power campaign delivers the same list of PLMNs as the second power campaign, it is tested that now no update attempt is performed anymore.

Initial forbidden: MCC=123, MNC=34  
 MCC=123, MNC=35  
 MCC=123, MNC=36  
 MCC=123, MNC=37  
 MCC=123, MNC=44  
 MCC=123, MNC=32

Final forbidden: MCC=123, MNC=34  
 MCC=123, MNC=35  
 MCC=123, MNC=36  
 MCC=123, MNC=37  
 MCC=123, MNC=44  
 MCC=123, MNC=32

### 3.6.21 MMG0122: Manual selection forb. PLMN, success

**Description:** Having 6 forbidden PLMNs in the list of forbidden PLMNs being in limited service condition, the user selects manually one of the forbidden PLMNs. The updating attempt is successful. It is checked that the resident part of the forbidden list on the SIM is not changed / changed properly. Switch back to automatic mode. [Why "NO SERVICE" in the last synch attempt?]

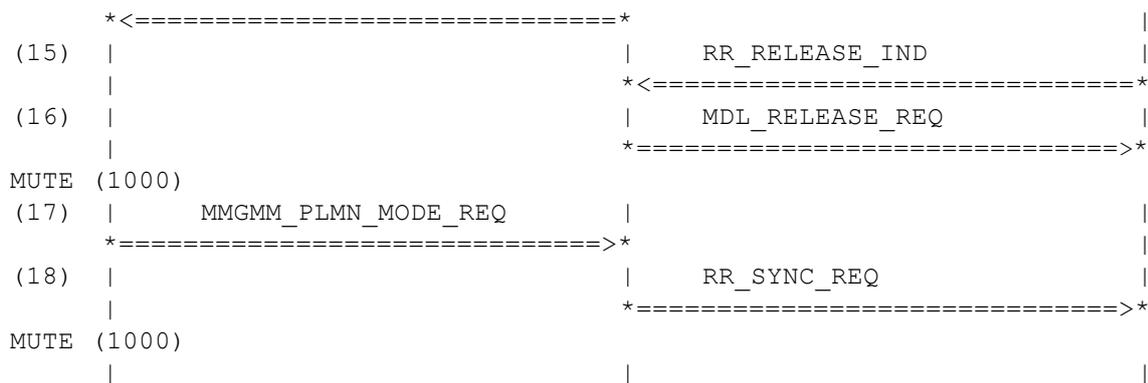

Initial forbidden: MCC=123, MNC=34  
 MCC=123, MNC=35  
 MCC=123, MNC=36  
 MCC=123, MNC=37  
 MCC=123, MNC=44  
 MCC=123, MNC=32

Final forbidden: MCC=123, MNC=34  
 <B> only MCC=123, MNC=35  
 MCC=123, MNC=36  
 MCC=123, MNC=37  
 <A> only MCC=123, MNC=44  
 MCC=123, MNC=32

### 3.6.22 MMG0123: Loss of service, non forb. PLMN offered in automatic mode, success

**Description:** Having 5 forbidden PLMNs in the list of forbidden PLMNs being in full service condition, service is lost, but a non-forbidden PLMN is found. The update attempt is successful. After a while, service is lost on this PLMN and RR offers a list of six PLMNs, one of them the former forbidden PLMN. It is expected that MM tries to update on this PLMN.

Initial forbidden: MCC=123, MNC=34  
 <B> only MCC=123, MNC=35  
 MCC=123, MNC=36  
 MCC=123, MNC=37  
 <A> only MCC=123, MNC=44  
 MCC=123, MNC=32

Final forbidden: same

**Variants:** <A>...<B>

### 3.6.26 MMG0127: Normal update after switch on after arrival at airport, 4 \* #17

**Description:** MM receives a SIM-INSERT indication primitive and initiates cell selection by issuing a RR-ACTIVATE request primitive. The cell selection process is successful (limited service), one or two non-forbidden PLMNs are offered. The update attempt is non-successful, four times #17 (network failure) error cause received.

<A> Only one PLMN found, no further attempt.

<B> Two PLMN found, further attempt on the other PLMN.

### 3.7 Identity Request

#### 3.7.1 MMG0135: Identity Request during Location Updating

**Description:** Connection is confirmed in the form of a RR-ESTABLISH confirmation primitive, whereupon MM changes to State 3 (Location Updating Initiated). In the course of Location Updating the network requests the identity of the MS. MM responds by issuing an Identity Response message as part of a RR-DATA indication primitive.

**Preamble:** MMG0101

## 3.8 Authentication

### 3.8.1 MMG0141: Authentication Request

**Description:** The network confirms the request from the mobile station for a RR Connection in the form of a RR-ESTABLISH confirmation primitive. MM changes to State 3 ((Location Updating initiated) and issues an AUTHENTICATION REQ message and a SIM-AUTHENTICATION request primitive, initiating the authentication procedure with SIM.

**Preamble:** MMG0101

	MMI / CM	MM	RR / DL

### 3.8.2 MMG0142: Authentication Response

**Description:** The authentication parameters are received from SIM in the form of a SIM-AUTHENTICATION confirmation primitive and are forwarded to the network as part of a AUTHENTICATION RES message. MM then commences synchronization with RR by issuing a RR-SYNC request primitive.

**Preamble:** MMG0141

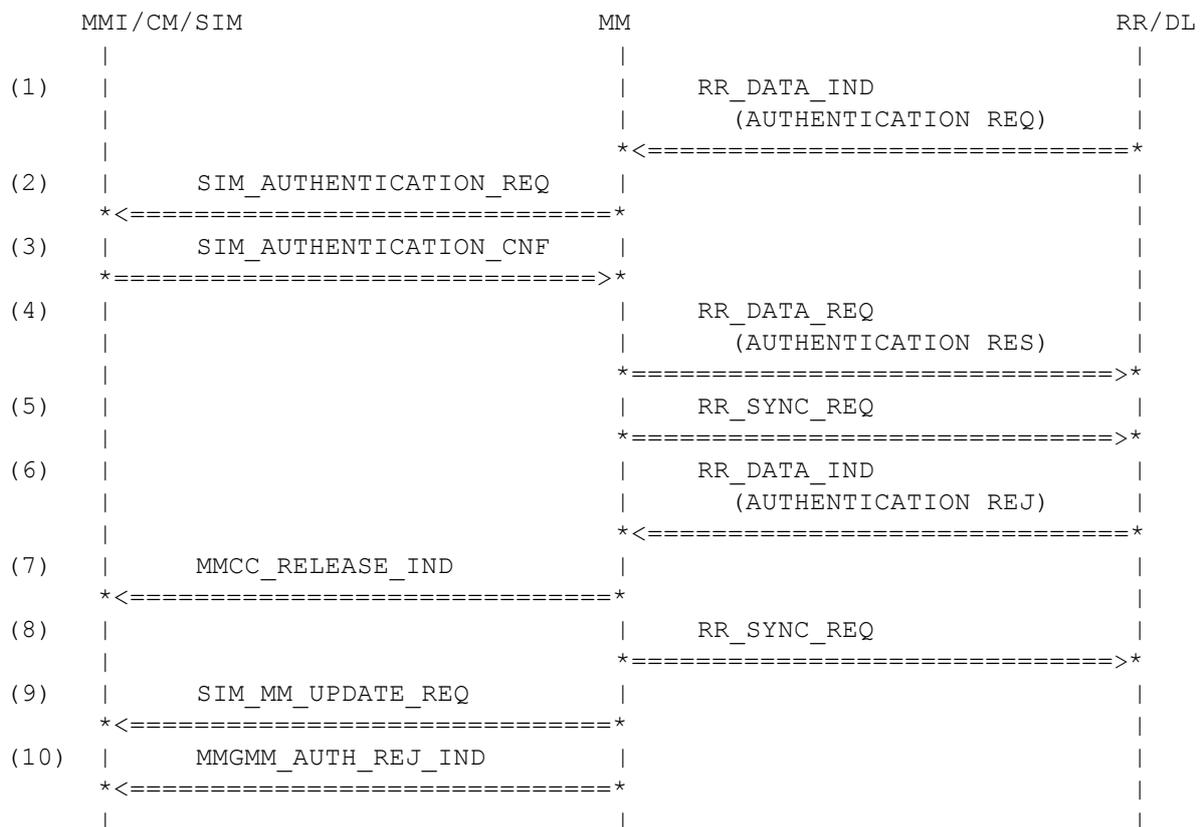

#### Parametrization

### 3.8.3 MMG0143: Authentication Request in State 6

**Description:** Authentication is requested by the network in the form of a AUTHENTICATION REQ message while the mobile station is in State 6 (MM Connection Active). Authentication is then sought and received from SIM (SIM-AUTHENTICATION request and confirmation primitives). MM sends this data to the network as part of a AUTHENTICATION RES message.

**Preamble:** MMG0043

### 3.8.8 MMG0148: Authentication Reject in State 5

**Description:** Authentication is rejected by the network in the form of a AUTHENTICATION REJ message while the mobile station is in State 5 (Wait for outgoing MM Connection). This is followed by the receipt of a SIM-REMOVE indication primitive. MM releases the RR connection and signals failure to MMI in the form of a MMR-NREG indication primitive with the negative registration cause set to 'authentication failure'.

**Preamble:** MMG0147

### 3.8.9 MMG0149: Authentication Reject during request for a second connection

**Description:** MM receives a second connection request from CC and sends a CM SERVICE REQUEST message to the network. This is followed by a AUTHENTICATION REQ message from the network; MM receives authentication confirmation for the previous authentication request (SIM-AUTHENTICATION confirmation primitive) and then seeks authentication for the second request. The data for the first authentication confirmation is forwarded to the network in the form of a AUTHENTICATION RES message. Authentication is rejected by the network in the form of a AUTHENTICATION REJ message. MM releases the RR connection and signals failure to MMI in the form of a MMR-NREG indication primitive with the negative registration cause set to 'authentication failure'. The reaction of MM to an Authentication failure during the Establishment of a second Connection is tested.

### 3.8.15 MMG0155: LUP with MM INFORMATION - I

**Description:** The SIM card needs some time to process the SRES. This time may be used by the network to transfer some information to the mobile station, which is forwarded transparently to upper layers. The authentication parameters are received from SIM in the form of a SIM-AUTHENTICATION confirmation primitive and are forwarded to the network as part of a AUTHENTICATION RES message. MM then commences synchronization with RR by issuing a RR-SYNC request primitive. The purpose of this testcase is to test that all parameters of the MM INFORMATION message are correctly transmitted to the ACI. Derived from testcase MMG0142.

**Preamble:** MMG0141

### 3.16.11 MMG0328: MM Authentication Failure

**Description:** MM is informed by means of a RR-ACTIVATE confirmation primitive that the mobile station is synchronous to a cell. A location updating is started. After authentication failure only limited service shall be allowed.

**Preamble:** MMG0313B

### 3.17.10 MMG0338: MM Failure

**Description:** MM is informed by means of a RR-ACTIVATE confirmation primitive that the mobile station is synchronous to a cell. A location updating is started. After four rejections limited service is indicated to the user.

**Preamble:** MMG0329B

### 3.17.12 MMG0356: PLMN Available Request

**Description:** MM is in limited service condition. MMI requests a PLMN available request and starts a PLMN search in RR. The result is forwarded to MMI. Even if no PLMN is present in the list, the service delivered from RR decides whether it is limited or no service.

**Preamble:** MMG0300

### 3.18 Registration (REG\_FULL\_SERVICE, with SIM card, automatic mode)

#### 3.18.1 MMG0340: Registration

**Description:** MMI restarts registration. This is not allowed in full service. Instead a PLMN list must be requested by MMI and a selection must be done using MMGMM\_PLMN\_RES. No network contact shall be take place here. As an optimization, which was formerly present in MM, the RR\_ACTIVATE\_REQ/RR\_ACTIVATE\_CNF pair could be avoided.

**Preamble:** MMG0337

### 3.19.7 MMG0406: Updated, Periodic LUP

**Description:** MM receives a SIM-INSERT indication primitive and initiates cell selection by issuing a RR-ACTIVATE request primitive. Successful conclusion of cell selection is signalled by the receipt of a RR-ACTIVATE confirmation primitive. MM forwards the PLMN identification to MMI in the form of a MMR-REG confirmation primitive. The periodic location updating timer is started.

**Preamble:** MMG0022

### 3.19.8 MMG0407: Normal Service, Timeout T3211, LUP Reject Cause #17

**Description:** The location updating is finished with a location updating reject message and the cause #17 network failure. The update status is UPDATED and the stored LAI is equal to the one received on the BCCH from the current serving cell and the attempt counter is smaller than 4. The MS shall keep the update status to UPDATED, the MM IDLE substate after the RR connection release is NORMAL SERVICE. The MS shall memorize the location updating type used in the location updating procedure. It shall start timer T3211 when the RR connection is released. When timer T3211 expires the location updating procedure is triggered again with the memorized location updating type.

### 3.19.14 MMG0413: Normal Service, T3211, Timeout T3210

**Description:** The RR connection is established and no answer receives from the network. After timeout of T3210 the RR connection is aborted. The update status is UPDATED and the stored LAI is equal to the one received on the BCCH from the current serving cell and the attempt counter is smaller than 4. The MS shall keep the update status to UPDATED, the MM IDLE substate after the RR connection release is NORMAL SERVICE. The MS shall memorize the location updating type used in the location updating procedure. It shall start timer T3211 when the RR connection is released. When timer T3211 expires the location updating procedure is triggered again with the memorized location updating type.

### 3.19.22 MMG0421: Normal Service, T3211, Random Access Failure

**Description:** An Random Access Failure occurs. After timeout T3213 the next attempt is started which fails with the same cause. The update status is UPDATED and the stored LAI is equal to the one received on the BCCH from the current serving cell and the attempt counter is smaller than 4. The MS shall keep the update status to UPDATED, the MM IDLE substate after the RR connection release is NORMAL SERVICE. The MS shall memorize the location updating type used in the location updating procedure. It shall start timer T3211 when the RR connection is released. When timer T3211 expires the location updating procedure is triggered again with the memorized location updating type.

**Preamble:** MMG0403

### 3.19.28 MMG0427: Not Updated in Current LA, Start Normal Location Updating

**Description:** MM receives a SIM-INSERT indication primitive and initiates cell selection by issuing a RR-ACTIVATE request primitive. Successful conclusion of cell selection is signalled by the receipt of a RR-ACTIVATE confirmation primitive. MM forwards the PLMN identification to MMI in the form of a MMR-REG confirmation primitive. A normal location updating is started.

**Preamble:** MMG0022

### 3.19.29 MMG0600: Normal Service, T3211, Anite Behaviour

**Description:** The radio link failure in the preamble is realized by the Anite by simply switching off the BCCH carrier. This leads to a cell reselection problem in RR and a cell selection failure is indicated to MM. RR retries the synchronisation and forwards a RR ACTIVATE IND to MM indicating that it is back to full service.

**Preamble:** MMG0406

### 3.20 MM Idle Mode Behaviour (Attempt to Update)

#### 3.20.1 MMG0428: Attempt to Update, Timeout T3211, LUP Reject Cause #17

**Description:** The location updating is finished with a location updating reject message and the cause #17 network failure. The update status is NOT UPDATED. The MS shall delete the location information and enter the MM IDLE substate ATTEMPTING TO UPDATE after the RR connection release. It shall start timer T3211 when the RR connection is released. When timer T3211 expires the location updating procedure is triggered again.

**Preamble:** MMG0427

### 3.20.2 MMG0429: Attempt to update, Timeout T3211, LUP Reject Cause, 2.-4. attempt

**Description:** The location updating is finished with a location updating reject message and the cause #17 network failure. The update status is NOT UPDATED. The MS is in MM IDLE substate ATTEMPTING TO UPDATE after the RR connection release. It shall start timer T3211 when the RR connection is released. When timer T3211 expires the location updating procedure is triggered again. After the 4. Attempt the MM IDLE substate ATTEMPTING TO UPDATE is entered and no new location updating is triggered.

### 3.20.44 MMG0474: Attempt to update, Emergency Call

**Description:** MM receives an establishment request from CC while in State 19.2 (Idle Attempting to Update). It then sends a CM SERVICE REQUEST message to the network. On receipt of a RR-ESTABLISH confirmation primitive from the network followed by a CM SERVICE ACCEPT message, MM issues as MMCC-ESTABLISH confirmation primitive.

**Preamble:** MMG0429

### 3.21 MM Idle Mode Behaviour (Limited Service)

#### 3.21.1 MMG0479: Limited Service State

**Description:** MM receives a SIM-INSERT indication primitive and initiates cell selection by issuing a RR-ACTIVATE request primitive. RR indicates only limited service. The periodic location updating timer shall not be started.

**Preamble:** MMG0022

MMI/CM	MM	RR/DL
COMMAND (MM CONFIG T3212_CNT=5)		
(1)   SIM_MM_INSERT_IND		
*=====>*		
(2)   MMGMM_REG_REQ		
*=====>*		
(3)	RR_ACTIVATE_REQ	
	*=====>*	
(4)	RR_ACTIVATE_CNF	
	*<=====*	
(5)   MMGMM_NREG_IND		
*<=====*		

#### Parametrization

Primitive	Parameter	Value
(1) SIM_MM_INSERT_IND	op_mode	NORMAL_SIM_INS

### 3.24.3 MMG0522: MM doesn't find LPLMN, needs NORMAL UPDATE, cell barred

**Description:** The mobile is switched on. A SIM is inserted. The mobile station doesn't find the requested PLMN, but another PLMN is available. A location updating attempt is performed, but the cell is barred. After some time the change of the access class is indicated by RR; the location updating attempt is started immediately.

### 3.24.5 MMG0524: MM needs IMSI ATTACH after switch on. Cell temporary barred

**Description:** The mobile is switched on. A SIM is inserted. The mobile station is updated on the cell, but an IMSI ATTACH is needed. The cell is barred. After a short period of time, the coverage is lost. After some time, coverage is gained again on the first cell. An IMSI ATTACH is expected.

<A> No service, access barred

<B> Limited service, access barred

<C> No service, random access failure

<D> Limited service, random access failure

[The newly introduced testcase currently doesn't run, the reason for this is a minor implementation problem in the protocol stack.]

### 3.24.6 MMG0525: MM needs IMSI ATTACH after switch on in tunnel

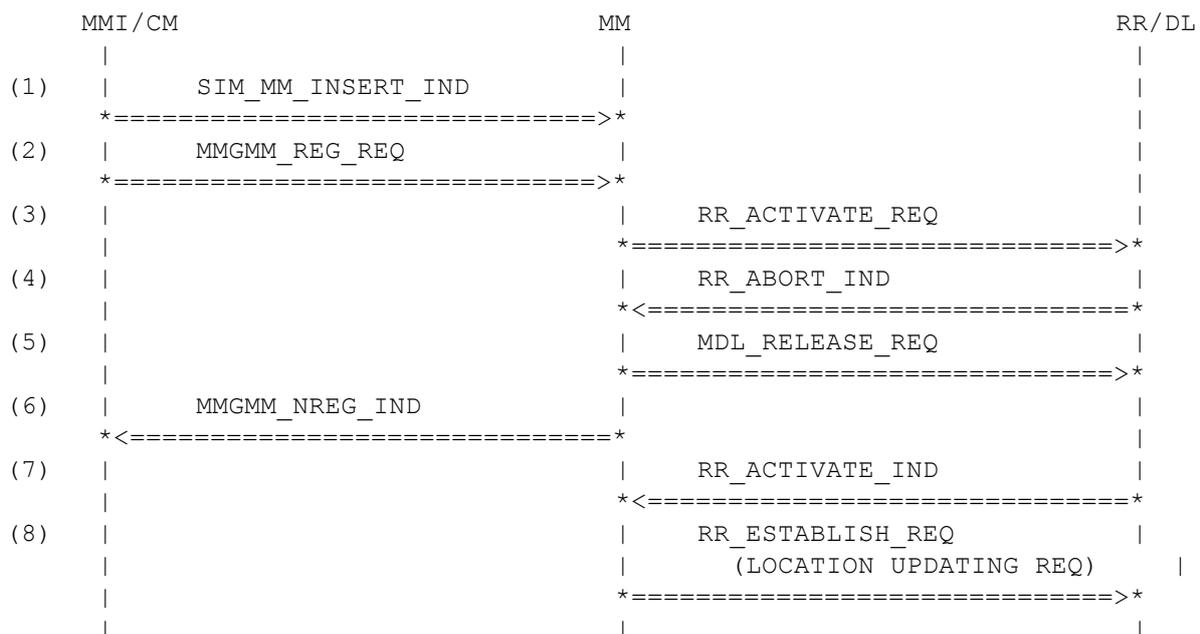

**Description:** The mobile is switched on. A SIM was inserted which has an update state in the area. At switch on, there is no service as the switch on was in a tunnel. After some time, the mobile phone leaves the tunnel and MM receives an RR\_ACTIVATE\_IND which indicates a cell selection in the updated location area, but the IMSI ATTACH is of course still needed.

<A> No service after switch on

<B> Only limited service after switch on

**Variants:** <A>...<B>

**Preamble:** MMG0001

### 3.25 Network search

#### 3.25.1 MMG0530: Aborted manual NW srch in MM\_IDLE\_ATTEMPT\_TO\_UPDATE

**Description:** The mobile is in MM\_IDLE\_ATTEMPT\_TO\_UPDATE state, manual network mode selected. The user starts a manual PLMN search. While this is running, the user aborts the operation. It is not expected that MM really stops searching PLMNs, but if a call attempt will be made in the next testcase, MM has to remember that it came from MM\_IDLE\_ATTEMPT\_TO\_UPDATE state.

**Preamble:** MMG0410

	MMI / CM	MM	RR / DL

### 3.25.4 MMG0533: Manual NW search in MM\_IDLE\_ATTEMPT\_TO\_UPDATE

**Description:** The mobile is in MM\_IDLE\_ATTEMPT\_TO\_UPDATE state, manual network mode selected. The user starts a manual PLMN search. After the search is finished, the user tries an emergency call.

**Preamble:** MMG0410

### 3.26.2 MMG0602: SIM insert indication by SAT - IMSI change, detach/attach, manual

**Description:** MM receives a SIM\_MM\_INSERT\_IND with IMSI change. This shall cause a MM Restart procedure. In this testcase, no detach is required by cell. Manual mode. The mobile is updated by the SIM in another location area that the one the mobile is manual required to register to. A normal location updating on the manually selected PLMN is expected.

**Preamble:** MMG0022

### 3.26.3 MMG0603: SIM insert indication by SAT - IMSI change, automatic mode

**Description:** MM receives a SIM\_MM\_INSERT\_IND with IMSI change. This shall cause a MM Restart procedure. In this testcase, no detach is required by cell and the mobile is in automatic mode. As the same cell is selected after the IMSI ATTACH, there is no need to indicate the full service condition to the MMI as there was never something else than full service indicated. (To simplify the protocol machine, this is done anyway now as it should not do any harm. The same applies for SIM\_MM\_UPDATE\_REQ.)

**Preamble:** MMG0024

### 3.28 Network search by MMI test cases

#### 3.28.1 MMG0650: Network search during location updating procedure

**Description:** The location updating is finished with a location updating reject message and the cause #17 network failure. The update status is UPDATED and the stored LAI is equal to the one received on the BCCH from the current serving cell and the attempt counter is smaller than 4. The MS shall keep the update status to UPDATED, the MM IDLE substate after the RR connection release is NORMAL SERVICE. The MS shall memorize the location updating type used in the location updating procedure. It shall start timer T3211 when the RR connection is released. When timer T3211 expires the location updating procedure is triggered again with the memorized location updating type. After the 4. Attempt the MM IDLE substate ATTEMPTING TO UPDATE is entered.

In this testcase it is tested that a network search by MMI will first not disturb the whole procedure and second that it will no be rejected by MM if MM is not in IDLE state, but stored until MM reenters IDLE state.

Test state MM\_WAIT\_FOR\_RR\_CONN\_MM (13)

Test state MM\_LUP\_INITIATED (3),

Test state MM\_LUP\_REJECTED (10)

It is assumed that during network search the mobile station remains the whole time on a suitable cell of the selected PLMN.

[Questionable whether this runs with the changed RR still in exactly this manner, to be checked.]

### 3.28.2 MMG0651: Network search interrupts MM\_WAIT\_FOR\_RR\_ACTIVE

**Description:** The user starts a network search by MMI while MM is in state MM\_WAIT\_FOR\_RR\_ACTIVE (18). If MM in state MM\_WAIT\_FOR\_RR\_ACTIVE (18) receives a MMGMM\_NET\_REQ primitive, this is not stored until IDLE state is reached, but the state MM\_WAIT\_FOR\_RR\_ACTIVE will be left immediately, the service state "no cell available" is remembered and the state MM\_IDLE\_PLMN\_SEARCH is entered. After finish of network search by MMI by the reception of an RR\_ABORT\_IND primitive, IDLE state is entered with the state "no cell available". If RR is finished with cell selection, either RR\_ABORT\_IND (negative case) or RR\_ACTIVATE\_IND will be received. RR will never respond with RR\_ACTIVATE\_CNF in this situation!

**Preamble:** MMG0022

### 3.28.7 MMG0656: Search for a more preferred PLMN, problems

**Description:** The mobile is registered in automatic mode on a VPLMN which is not on the most prominent place of the preferred PLMN list. A registration attempt is performed on this network. This is non-successful. It is checked that the mobile performs an automatic PLMN selection as MM has an actual alternative PLMN list.

### 3.28.12 MMG0661: Interworking of T3212 and T\_HPLMN, HPLMN found

**Description:** The mobile is registered in automatic mode on a VPLMN which is on the most prominent place of the preferred PLMN list. It is checked that the mobile periodically searches for the HPLMN and that it doesn't change its PLMN if the HPLMN is not among of those PLMNs available. During PLMN search T3212 expired. The search was successful, we try to register on the HPLMN (which does not support ATTACH/DETACH), but after random access failure we come back to the old network. The periodic update still has to be done.

### 3.29 Engineering mode

#### 3.29.1 MMG0670: EM-Identity Request during Location Updating

**Description:** Original Testcase MMG0131, lightly modified for EM purposes. Connection is confirmed in the form of a RR-ESTABLISH confirmation primitive, whereupon MM changes to State 3 (Location Updating Initiated). In the course of Location Updating the network requests the identity of the MS. MM responds by issuing an Identity Response message as part of a RR-DATA indication primitive.

**Preamble:** MMG0101

	MMI / CM / SIM	MM	RR / DL
(1)	EM_MM_EVENT_REQ		
	*=====>*		
(2)		RR_ESTABLISH_CNF	
		*<=====*	
(3)		RR_DATA_IND

### 3.29.2 MMG0671: EM-Authentication Request

**Description:** Original Testcase MMG0141, lightly modified for EM purposes. The network confirms the request from the mobile station for a RR Connection in the form of a RR-ESTABLISH confirmation primitive. MM changes to State 3 ((Location Updating initiated) and issues an AUTHENTICATION REQ message and a SIM-AUTHENTICATION request primitive, initiating the authentication procedure with SIM.

**Preamble:** MMG0101

	MMI/CM	MM	RR/DL
(1)	EM_MM_EVENT_REQ		
	*----->*		
(2)		RR_ESTABLISH_CNF	
		*-----<*

### 3.30 GPRS related registration

#### 3.30.1 MMG1000: Activation of MS as class A, BC, BG, CG mobile

**Description:** MM receives a request to initiate a cell selection in RR. This is done by the MMGMM\_REG\_REQ primitive with reg\_type set to REG\_CELL\_SEARCH\_ONLY. MM remembers that it is doing a RR activation for GMM. No SIM is inserted in the mobile station.

**Preamble:** MMG0001

#### Parametrization

	Primitive	Parameter	Value
(1)	MMGMM_REG_REQ	service_mode	SERVICE_MODE_FULL
		reg_type	REG_CELL_SEARCH_ONLY
		mobile_class	MMGMM_CLASS_BC
(2)	RR_ACTIVATE_REQ	plmn	PLMN_NO_ID

		tmsi_struct	MOB_ID_NO_ID
		thplmn	NOT_USED
		bcch_info	NOT_USED
		cell_test	CELL_TEST_DISABLE
		gprs_indication	GPRS_YES
History:	21.08.00	HM	Initial

#### 3.30.2 MMG1001: Positive outcome of MMGMM\_REG\_REQ, no SIM

**Description:** MM receives a RR\_ACTIVATE\_CNF from RR. Limited service is indicated. No SIM is inserted in the mobile station. MM enters main state MM\_IDLE\_NO\_IMSI, registration state REG\_LIMITED\_SERVICE. If RR\_ACTIVATE\_CNF indicates limited service only, there will never be tried a location update/imsi\_struct attach.

[André: Wenn RR "LIMITED SERVICE" an MM meldet, bedeutet dies, daß RR nichts Besseres für GSM als "LIMITED SERVICE" anzubieten hat. Damit geht MM davon aus, daß das auch für GPRS gilt. Wenn es den schrägen Fall geben sollte, daß GSM keinen "FULL SERVICE" kriegt, GPRS aber vorhanden ist, müssen wir nochmal über den Ablauf diskutieren. Ist aber kein größeres Problem dann, wir müssen dann nur einen Ablauf spezifizieren und wahrscheinlich ein paar Primitive etwas erweitern.]

**Preamble:** MMG1000

History:	21.08.00	HM	Initial

**3.30.3 MMG1002: Negative outcome of MMGMM\_REG\_REQ**

**Description:** MM receives a RR\_ABORT\_IND from RR. Cell selection failed is indicated. No SIM is inserted in the mobile station. MM enters main state MM\_IDLE\_NO\_CELL\_AVAILABLE, registration state REG\_NO\_SERVICE. GMM is informed by the MMGMM\_NREG\_IND primitive about the fact that the cell selection failed.

**Preamble:** MMG1000

	MMI / CM / SIM	MM	RR / DL

### 3.30.4 MMG1003: SIM inserted, GMM requests RR activation

**Description:** MM receives a SIM\_MM\_INSERT\_IND from the SIM entity. A test SIM is inserted in the mobile station. The data delivered by this primitive will be stored in the respective MM data structures. GMM requests a RR activation by MMGMM\_REG\_REQ. MM enters main state WAIT\_FOR\_RR\_ACTIVE, registration state is not to be changed while RR activation is pending.

**Preamble:** MMG0001

	MMI / CM / SIM		MM		RR / DL

### 3.30.13 MMG1012: Update on the cell required, attach, non-imm. success

**Description:** If receiving an MMR\_REG\_REQ primitive with parameter REG\_REMOTE\_CONTROLLED the appropriate location updating procedure will be started, if necessary.  
In this testcase the GSM location updating attempt will not be successful immediately, but will be successful in the second attempt.

**Preamble:** MMG1005B

### 3.30.15 MMG1014: CM service request in IDLE ATTEMPT TO UPDATE, I

**Description:** In this testcase it is tested that, if a call attempt is made in state IDLE ATTEMPT TO UPDATE, a registration attempt has to be performed. This all has to be negotiated with GMM.  
 In this testcase the location updating procedure for MM will be performed as successfull combined attach in network mode I.

Revised**3.30.16 MMG1015: CM service request in IDLE ATTEMPT TO UPDATE, II**

**Description:** In this testcase it is tested that, if a call attempt is made in state IDLE ATTEMPT TO UPDATE, a registration attempt has to be performed. This all has to be negotiated with GMM.

In this testcase the location updating procedure for MM will be performed as successful non-combined attach in either network mode II or III. The location updating procedure will be done with follow on request by MM.

### 3.30.17 MMG1016: Call attempt causing LUP with follow on proceed

**Description:** If a call attempt is made in MM\_IDLE\_ATTEMPT\_TO\_UPDATE state, the mobile has to start a location updating procedure. This has to be negotiated with GMM. In this testcase the location updating procedure for MM will be performed as successfull non-combined attach in either network mode II or III. The location updating procedure will be done with follow on request by MM, as the MMGMM\_CM\_ESTABLISH\_RES will be sent by GMM before the MMGMM\_REG\_REQ. The MMGMM\_REG\_CNF will be sent earlier as usual if GPRS is present at the place where MMGMM\_LUP\_ACCEPT\_IND normally would be sent, the reason is that the location updating procedure ends here before the channel release and GPRS will not request the physical channels due until MMGMM\_CM\_RELEASE\_IND was received.

### 3.30.18 MMG1017: Emergency call with GPRS, ATTEMPT TO UPDATE

**Description:** In this testcase it is tested wheter emergency calls are possible in state MM\_IDLE\_ATTEMPT\_TO\_UPDATE.  
Note: The establishment of CM connections is indicated and responded by different primitives, depending whether it is an emergency or normal call attempt, but the release of the last MM connection is always indicated by the primitive MMGMM\_CM\_RELEASE\_IND.

### 3.30.21 MMG1020: Successful combined attach

**Description:** After cell selection, MM receives a MMGMM\_ATTACH\_STARTED\_REQ which indicates that GMM has started the combined attach procedure, network mode I. The combined attach procedure ends for MM with a positive outcome, this means, a

MMGMM\_ATTACH\_ACCEPT\_REQ primitive is received. RR and SIM are informed about the new parameters. The registration is not confirmed to GMM as GMM should already know the full service condition.

**Preamble:** MMGI005B

### 3.30.22 MMG1021: Unsuccessful combined attach

**Description:** After cell selection, MM receives a MMGMM\_ATTACH\_STARTED\_REQ which indicates that GMM has started the combined attach procedure, network mode I. The combined attach procedure ends for MM with a negative outcome, this means, a MMGMM\_ATTACH\_REJ\_REQ primitive is received. The error cause is not fatal, thus not invalidating the SIM as such.

**Preamble:** MMG1005B

MMI/CM/SIM	MM	RR/DL
COMMAND (MM CONFIG T3212_CNT=5)

### 3.30.23 MMG1022: Unsuccessful combined attach, fieldstrength jump, T\_REG

**Description:** After combined attach attempt MM entered MM\_IDLE\_ATTEMPT\_TO\_UPDATE state. A normal SIM and no test SIM is inserted. A fieldstrength jump is announced by RR to indicate that the conditions have become better now. MM signals this to GMM as faked cell selection to trigger a new location updating attempt. After that, the registration timer times out. This also is indicated to GMM.

**Preamble:** MMG0001

### 3.30.24 MMG1023: T3212 not causing updating

**Description:** MM is either combined attached by GMM in network mode I or MM received a MMGMM\_ATTACH\_REJ\_REQ. The testcase waits for a periodic location updating which is not expected to happen.

After that, MM is detached by GMM procedures.

<A> After successful combined attach procedure

<B> After unsuccessful combined attach procedure

[Under revision, doesn't pass currently. Maybe we change the protocol that MM needs not to keep track about the network mode anymore, in this case the testcase has to be reworked.]

**Variants:** <A>...<B>

**Preamble:** <A> MMG1020  
<B> MMG1021

### 3.30.26 MMG1025: T3212 started after MMGMM\_START\_T3212\_REQ I

**Description:** GMM detaches the mobile station for GPRS services only in network mode I. (About that, MM must not be notified by GMM by using MMGMM\_DETACH\_STARTED\_REQ as the detach is

for GPRS only.) After that, MM has to start its own periodic updating timer T3212. MM is brought to exclusive CS operation by GMM after GMM has finished its own GPRS detach.

### 3.30.28 MMG1027: Unsuccessful combined attach

**Description:** After cell selection, MM receives a MMGMM\_ATTACH\_STARTED\_REQ which indicates that GMM has started the combined attach procedure, network mode I. The combined attach procedure ends for GMM with a negative outcome, this means, a MMGMM\_ATTACH\_REJ\_REQ primitive is received. The error cause is #7 (GPRS not allowed), thus it is not interesting for the GSM side. If the mobile is not of class CG, this maybe followed by a registration attempt for GSM only services. It is tested that a MMGMM\_ATTACH\_REJ\_REQ with cause #7 doesn't cause any visible action in MM.

**Preamble:** MMG1005B

### 3.30.29 MMG1028: Unsuccessful combined attach, IMSI unknown in HLR

**Description:** After cell selection, MM receives a MMGMM\_ATTACH\_STARTED\_REQ which indicates that GMM has started the combined attach procedure, network mode I. The combined attach procedure ends for GMM with a negative outcome, this means, a MMGMM\_ATTACH\_REJ\_REQ primitive is received. The error cause is #2 (IMSI unknown in HLR), the TMSI, ciphering key, ciphering sequence key shall be deleted and the SIM be considered for GSM services as invalid until switch off or the SIM is removed. The SIM remains valid for GPRS services, so MM has to handle the last requirement with care! RR must not be switched to "limited service" here!

### 3.30.35 MMG1035: MM receives #14 from GMM, NW list exists, NW mode II

**Description:** MM will become idle updated by its own procedures. In the beginning of the procedure, a PLMN with an alternative PLMN exists. MM receives MMGMM\_ATTACH\_REJ\_REQ, cause #14 in network mode II. A network list existed. It is checked that MMGMM\_ATTACH\_REJ\_REQ triggers no PLMN search in network mode BG.

**Preamble:** MMG1003

**3.30.38 MMG1038: MM has #14 forbidden list, class CG**

**Description:**    MM will become idle updated on the HPLMN. On the HPLMN, MM loses service and gets the old network offered where #14 was received. It is checked that MM considers the forbidden PLMN for GPRS services list in its PLMN selection decision and selects the other network offered. (As the MS is updated on the SIM in this location area and no ATTACH is necessary, MM immediately is able to indicate full service in the first MMGMM\_ACTIVATE\_IND.)

### 3.30.39 MMG1040: User requires different network manually

**Description:** The mobile is registered in full service mode and camped on a cell where it is updated for, the MM state is MM\_IDLE\_NORMAL\_SERVICE. The user decides to select another network manually.  
[This testcase shows that it is still not possible to inform GMM and the MMI about the GPRS status of the networks found. This was foreseen in the MMGMM SAP interface, but is currently not possible. HM, 03.05.01]

### 3.30.42 MMG1053: SIM inserted, GMM requests RR activation

**Description:** MM receives a SIM\_MM\_INSERT\_IND from the SIM entity. A test SIM is inserted in the mobile station. The data delivered by this primitive will be stored in the respective MM data structures. GMM requests a RR activation by MMGMM\_REG\_REQ while MM is in full service state.

**Preamble:** MMG0001

### 3.30.43 MMG1054: Full Service in GSM, no ATTACH needed

**Description:** MM receives a RR\_ACTIVATE\_CNF primitive indicating that RR has selected a cell. MM had to start a cell selection for GMM only. Full service is indicated, no IMSI ATTACH is necessary. MM will not inform GMM by MMGMM-REG-CNF about the full service condition until it is required to do so, only a MMGMM-ACTIVATE-IND is sent to inform GMM about the successful cell selection.

- <A> No IMSI attach, no periodic update
- <B> No IMSI attach, periodic update
- <C> IMSI attach (but already done), no periodic update
- <D> IMSI attach (but already done), periodic update

**Variants:** <A>...<D>

**Preamble:**

**3.31.11 MMG1153: Remote controlled detach without SIM remove/switch off I**

**Description:** MM receives an MMGMM\_NREG\_REQ primitive with parameter CS\_DISABLE, MMGMM\_NO\_ERROR. IMSI ATTACH/DETACH is allowed on the cell. This is a remote controlled IMSI DETACH. It is expected that the DETACH operation will be performed and neither the SIM will be invalidated nor the lower layers will be switches off. The parameter detach\_done is not ignored here. Here a T3220 timeout aborts the connection. After release of the layer 2 connection, RR guarantees to send a RR\_RELEASE\_IND in this case.

**Preamble:** MMG1011B

### 3.31.14 MMG1156: Remote controlled detach without SIM remove/switch off IV

**Description:** MM receives an MMGMM\_NREG\_REQ primitive with parameter CS\_DISABLE, MMGMM\_NO\_ERROR. IMSI ATTACH/DETACH is either not allowed on the cell or detach\_done equals to MMGMM\_DETACH\_DONE to indicate no further action (IMSI DETACH) is required by MM. This is a remote controlled IMSI DETACH. It is expected that the DETACH operation will not be performed and neither the SIM will be invalidated nor the lower layers will be switches off. The parameter detach\_done is not ignored here.

<A> No IMSI ATTACH/DETACH, but MMGMM\_PERFORM\_DETACH

<B> IMSI ATTACH/DETACH allowed, but MMGMM\_DETACH\_DONE

**Variants:** <A>...<B>

**Preamble:** <A> MMG1010A  
<B> MMG1011B

### 3.31.16 MMG1161: Remote controlled detach without SIM remove/switch off V

**Description:** MM receives an MMGMM\_NREG\_REQ primitive with parameter CS\_DISABLE, MMGMM\_NO\_ERROR. IMSI ATTACH/DETACH is allowed on the cell. This is a remote controlled IMSI DETACH. All calls are released to the upper layers. It is expected that the DETACH operation will be performed and neither the SIM will be invalidated nor the lower layers will be switches off. The parameter detach\_done is not ignored here. Here a T3220 timeout aborts the connection. After release of the layer 2 connection, RR guarantees to send a RR\_RELEASE\_IND in this case. Before returning to IDLE state and before indicating the end of

deregistration, MM sends a MMGMM\_CM\_RELEASE\_IND to inform GMM that the last call has been released.

**Preamble:** MMGI160B

### 3.31.17 MMG1162: Remote controlled detach without SIM remove/switch off VI

**Description:** MM receives an MMGMM\_NREG\_REQ primitive with parameter CS\_DISABLE, MMGMM\_NO\_ERROR. IMSI ATTACH/DETACH is allowed on the cell. This is a remote controlled IMSI DETACH. All calls are released to the upper layers. It is expected that the DETACH operation will be performed and neither the SIM will be invalidated nor the lower layers will be switches off. The parameter detach\_done is not ignored here. Here the connection is released normally, initiated by a CHANNEL RELEASE message received by the network. After release of the layer 2 connection, MM receives a RR\_RELEASE\_IND. Before returning to IDLE state and before indicating the end of deregistration, MM sends a MMGMM\_CM\_RELEASE\_IND to inform GMM that the last call has been released.

### 3.31.18 MMG1163: Remote controlled detach without SIM remove/switch off VII

**Description:** MM receives an MMGMM\_NREG\_REQ primitive with parameter CS\_DISABLE, MMGMM\_NO\_ERROR. IMSI ATTACH/DETACH is allowed on the cell. This is a remote controlled IMSI DETACH. All calls are released to the upper layers. It is expected that the DETACH operation will be performed and neither the SIM will be invalidated nor the lower layers will be switches off. The parameter detach\_done is not ignored here. Here the connection is aborted by RR due to a radio link failure. Before returning to IDLE state and before indicating the end of deregistration, MM sends a MMGMM\_CM\_RELEASE\_IND to inform GMM that the last call has been released.

### 3.31.19 MMG1164: Remote controlled detach without SIM remove/switch off VIII

**Description:** MM receives an MMGMM\_NREG\_REQ primitive with parameter CS\_DISABLE, MMGMM\_NO\_ERROR. IMSI ATTACH/DETACH is either not allowed on the cell or detach\_done equals to MMGMM\_DETACH\_DONE to indicate no IMSI DETACH is required by MM anymore. It is expected that no IMSI DETACH message will be sent to the network and neither the SIM will be invalidated nor the lower layers will be switched off. The CM connections are released to the CM entities, then the RR connection is aborted. After MM has received the RR\_RELEASE\_IND from RR, indicating the L2 connection also has been released, a MDL\_RELEASE\_REQ is sent and MM indicates the release of the last CM connection to GMM by sending a MMGMM\_CM\_RELEASE\_IND and subsequent (order matters) a MMGMM\_NREG\_CNF to confirm the end of the end of the deregistration procedure.

- <A> No IMSI ATTACH/DETACH, but MMGMM\_PERFORM\_DETACH
- <B> IMSI ATTACH/DETACH allowed, but MMGMM\_DETACH\_DONE

**Variants:** <A>...<B>

**Preamble:** <A> MMG1160A  
 <B> MMG1160B

	MMI / CM / SIM	MM	RR / DL

**3.31.20 MMG1165: Remote controlled detach without SIM remove/switch off VIII**

**Description:** MM receives an MMGMM\_NREG\_REQ primitive with parameter CS\_DISABLE, MMGMM\_NO\_ERROR. IMSI ATTACH/DETACH is either not allowed on the cell or detach\_done equals to MMGMM\_DETACH\_DONE to indicate no IMSI DETACH is required by MM anymore. It is expected that no IMSI DETACH message will be sent to the network and neither the SIM will be invalidated nor the lower layers will be switched off. The CM connections are released to the CM entities, then the RR connection is aborted. Here the exceptional case is tested that just in this moment instead of the expected RR\_RELEASE\_IND a RR\_ABORT\_IND is received to indicate a radio link failure.

<A> No IMSI ATTACH/DETACH, but MMGMM\_PERFORM\_DETACH

<B> IMSI ATTACH/DETACH allowed, but MMGMM\_DETACH\_DONE

**Variants:** <A>...<B>

**3.32.7 MMG1206: RR\_RELEASE\_IND in state MM\_WAIT\_FOR\_RR\_CONN\_MM**

**Description:** MM receives a RR\_RELEASE\_IND in state MM\_WAIT\_FOR\_RR\_CONN\_MM. This is a clash case. There is an incoming MT call already in RR, the MT connection has precedence, RR sends a RR\_RELEASE\_IND for the MO connection and then the MT connection is going to be established. It is important here that the L2 connection is not releases by issuing a MDL\_RELEASE\_REQ. It is also important that when the MO call is released for the CM layer GMM will not be informed about the end of all CS operations as there is still the MT call present in RR. This is be done when the MT call terminates, not before.

**Preamble:** MMG1200

```

### 3.32.8 MMG1207: RR\_RELEASE\_IND in state MM\_WAIT\_FOR\_RR\_CONN\_MM

**Description:** MM receives a RR\_RELEASE\_IND in state MM\_WAIT\_FOR\_RR\_CONN\_MM. This is a clash case. There is an incoming MT call already in RR, the MT connection has precedence, RR sends a RR\_RELEASE\_IND for the MO connection and then the MT connection is going to be established. It is important here that the L2 connection is not releases by issuing a

MDL\_RELEASE\_REQ. It is also important that when the MO call is released for the CM layer GMM will not be informed about the end of all CS operations as there is still the MT call present in RR. This is to be done when the MT call terminates, not before. Here there are problems with the establishment of the MT call, so the RR\_ESTABLISH\_IND will never be received by MM.

**Preamble:** MMGI200

**3.32.9 MMGI208: Clash of establishment MO/MT in case of SMS**

**Description:** MM receives the request to establish a MO call. GPRS is active, so it has to ask whether it is allowed to establish the call. A MT call is received. The answer from GMM is negative, this negative response is to be ignored as we have a circuit switched CM service ongoing. After entering MM\_CONN\_ACTIVE the MO call has to be established.

**Preamble:** MMGI004A

### 3.32.10 MMG1210: MM receives MT in IDLE mode

**Description:** MM receives a RR\_ESTABLISH\_IND in IDLE mode. GPRS is present. GMM already knows there is an incoming call because it has already been informed by GRR about that fact, MM is allowed to accept the call and to establish calls until the last call has been released. After the last call has been released, a MMGMM\_CM\_RELEASE\_IND is issued.

**Preamble:** MMG1004A

History: 07.12.00 HM Initial

### 3.32.11 MMG1211: Interworking of cell selection in new LA and MO call

**Description:** MM enters a new location area, network mode II. An update attempt is performed, this fails with radio link failure. While T3211 is running, the user tries to establish an MO call. It is expected that MM performs a remote controlled location updating procedure, subsequently the MO call establishment is performed and afterwards, at the end of the last circuit switched procedure, the MMGMM\_REG\_CNF is sent.

### 3.33 Cell selection/reselection in RR, normal updating

#### 3.33.1 MMG1300: New location area in full service condition

**Description:** MM receives a new cell from RR in full service condition. This cell is located in a new location area. A normal updating procedure is necessary, this is signalled to GMM. MM then waits for the update decision from GMM (either update by MM's own procedure, no update at all or combined attach by GMM procedures).

**Preamble:** MMG1011A

### 3.33.4 MMG1303: Third location area in the middle of the procedure

**Description:** During remote controlled GPRS updating procedure, the mobile station enters a third location area different from the old location area and the location area a updating attempt has already

been performed. It is expected that MM stops updating by using its own procedures and informs GMM about the cell selection, indicating the need for an updating decision by GMM.

**3.33.5 MMG1304: Back to old updated area after T3211 started**

**Description:** During remote controlled GPRS updating procedure, MM comes back to the old updated location area after some other failure than random access failure. The LOCATION UPDATING REQUEST message has left the mobile station. It may have been accepted by the network, so MM has to continue updating until a location updating accept is received in the old location area.

### 3.34.5 MMG1412: SIM removal IMSI ATTACH, MM\_IDLE\_NORMAL\_SERVICE

**Description:** MM receives a SIM\_REMOVE\_IND after non-successful IMSI ATTACH in state MM\_IDLE\_NORMAL\_SERVICE, T3211 running. The end of update (non-success) is indicated to GMM immediately, it is checked that T3211 was stopped.

**Preamble:** MMG1064

### 3.34.6 MMG1413: Interworking of IMSI ATTACH, Call and SIM removal

**Description:** If receiving an MMR\_REG\_REQ primitive with parameter REG\_REMOTE\_CONTROLLED the appropriate location updating procedure will be started, if necessary.  
In this testcase the GSM location updating attempt will not be successful immediately. Then the User makes a mobile originated call. During this the SIM is removed. As the acceptance of the call is equivalent with a LUP ACCEPT we are after the call IMSI ATTACHED, even if the SIM has been removed we need an IMSI DETACH now.

**Preamble:** MMG1005A

### 3.34.7 MMG1414: Interworking of Normal Update, Emergency Call and SIM removal

**Description:** If receiving an MMR\_REG\_REQ primitive with parameter REG\_REMOTE\_CONTROLLED the appropriate location updating procedure will be started, if necessary. In this testcase the GSM location updating attempt will not be successful immediately. Then the User makes an emergency call. During this the SIM is removed. As the normal update has not been accepted the normal update ends after RR release with MMGMM\_REG\_REJ.
